# Preface

WISE 2006 was held in Wuhan, China, during October 23–26, hosted by Wuhan University. As more and more diverse information becomes available on the Internet and in the Web, novel theoretical and technical approaches to building and improving Web information systems become of vital importance to the further development of information technology. Following the successful conferences from 2000 to 2005, WISE 2006 provided a premium forum for researchers, professionals, and industrial practitioners from around the world to share their rapidly evolving knowledge and to report on new advances in Web information systems.

WISE 2006 received 183 submissions from 20 countries worldwide. From these submissions, the Program Committee selected 37 regular papers and 17 short papers, corresponding to an acceptance ratio of 20% and 9%, respectively. This volume also includes invited keynote papers, given by three leading experts at WISE 2006: M. Tamer Özsu (University of Waterloo), Katsumi Tanaka (Kyoto University) and Lizhu Zhou (Tsinghua University).

The submission and review process worked as follows. Each submission was assigned to three or four Program Committee members for review. During the discussion phase PC members and PC chairs carefully analyzed in particular papers that received divergent evaluations. Based on the review scores and the results of the discussions, the Program Chairs made the final decision.

Three workshops were held in conjunction with WISE 2006. The workshop papers are published in a separate proceedings by Springer in its *Lecture Notes in Computer Science* series (LNCS 4256).

We are grateful to the Program Committee members who helped tremendously in reviewing the large number of submissions, to Yanchun Zhang, Xuhui Li and Qing Li for their great support in the conference organization, to Yurong Chen for setting up the Web site and processing the submissions and registrations. Finally, we would like to thank Wuhan University for their support in organizing the conference.
