Preface

The present volume contains a selection of papers presented at the Seventh Workshop on Membrane Computing, WMC7, which took place in Leiden, The Netherlands, during July 17–21, 2006. The first three workshops on membrane computing were organized in Curtea de Argeş, Romania – they took place in August 2000 (with the proceedings published in *Lecture Notes in Computer Science*, volume 2235), in August 2001 (with a selection of papers published as a special issue of *Fundamenta Informaticae*, volume 49, numbers 1–3, 2002), and in August 2002 (with the proceedings published in *Lecture Notes in Computer Science*, volume 2597). The next three workshops were organized in Tarragona, Spain, in July 2003, in Milan, Italy, in June 2004, and in Vienna, Austria, in July 2005, with the proceedings published as volumes 2933, 3365, and 3850, respectively, of *Lecture Notes in Computer Science*.

The 2006 edition of WMC was organized (and supported) by Lorentz Center, Leiden, under the auspices of the European Molecular Computing Consortium (EMCC). Special attention was paid to the interaction of membrane computing with biology, focusing both on the biological roots of membrane computing and on applications of membrane computing in biology and medicine. Furthermore, the meeting was planned also as an event promoting the interaction and cooperation between the participants (e.g., the workshop was one day longer than usually, with afternoons devoted mainly to joint work).

The pre-proceedings of WMC7 were published by the Institute of Advanced Computer Science (LIACS) of Leiden University, and they were available during the workshop. Each paper was refereed by two members of the Program Committee. As an indication of the healthy state of this research area, it is worth noting that both the number of submitted papers and the total number of contributing authors were bigger this year than last year, while the number, the variety, and the intricacy of applications (mainly in biology and medicine) also increased substantially. These observations are confirmed by the present volume. Most of the included papers were significantly modified according to the discussions that took place during the workshop.

The volume includes all the invited talks (seven this time) – more than for any proceedings of previous editions of WMC; moreover, this time the invited talks were chosen in such a way as to reflect the relationships of membrane computing to biology and medicine. Consequently, this volume is a faithful illustration of the current state of research in membrane computing (a comprehensive source of information about this fast-emerging area of natural computing is the Web page <http://psystems.disco.unimib.it>).

The Program Committee consisted of Matteo Cavaliere (Trento, Italy), Erzsébeth Csuhaj-Varjú (Budapest, Hungary), Marian Gheorghe (Sheffield, UK), Hendrik Jan Hoogeboom (Leiden, Netherlands) – Co-chair, Oscar H. Ibarra

(Santa Barbara, USA), Natasha Jonoska (Tampa, Florida), Shanhara Narayanan Krishna (Bombay, India), Gheorghe Păun (Bucharest, Romania, and Seville, Spain) – Co-chair, Mario J. Pérez-Jiménez (Seville, Spain), and Claudio Zandron (Milan, Italy).

The editors are indebted to the members of the Program Committee, to all participants in WMC7, and in particular to the contributors to this volume. Special thanks go to Lorentz Center, Leiden, for the perfect organization of the workshop, and to Springer for the efficient cooperation in the timely production of the present volume.

November 2006

Table of Contents

Invited Lectures

Biological Roots and Applications of P Systems: Further Suggestions . . . <i>Ioan I. Ardelean</i>	1
Formalizing Spherical Membrane Structures and Membrane Proteins Populations <i>Daniela Besozzi and Grzegorz Rozenberg</i>	18
Quorum Sensing: A Cell-Cell Signalling Mechanism Used to Coordinate Behavioral Changes in Bacterial Populations <i>Miguel Cámara</i>	42
A Modeling Approach Based on P Systems with Bounded Parallelism <i>Francesco Bernardini, Francisco J. Romero-Campero, Marian Gheorghe, and Mario J. Pérez-Jiménez</i>	49
Synchrony and Asynchrony in Membrane Systems <i>Jetty Kleijn and Maciej Koutny</i>	66
MP Systems Approaches to Biochemical Dynamics: Biological Rhythms and Oscillations <i>Vincenzo Manca</i>	86
Modeling Signal Transduction Using P Systems <i>Andrei Păun, Mario J. Pérez-Jiménez, and Francisco J. Romero-Campero</i>	100

Regular Papers

Extended Spiking Neural P Systems <i>Artiom Alhazov, Rudolf Freund, Marion Oswald, and Marija Slavkovik</i>	123
Towards a Characterization of P Systems with Minimal Symport/Antiport and Two Membranes <i>Artiom Alhazov and Yurii Rogozhin</i>	135
Expressing Control Mechanisms of Membranes by Rewriting Strategies <i>Oana Andrei, Gabriel Ciobanu, and Dorel Lucanu</i>	154

Tissue P Systems with Communication Modes	170
<i>Francesco Bernardini and Rudolf Freund</i>	
Towards a Hybrid Metabolic Algorithm	183
<i>Luca Bianco and Federico Fontana</i>	
Towards a P Systems Pseudomonas Quorum Sensing Model	197
<i>Luca Bianco, Dario Pescini, Peter Siepmann, Natalio Krasnogor, Francisco J. Romero-Campero, and Marian Gheorghe</i>	
Membrane Systems with External Control	215
<i>Robert Brijder, Matteo Cavaliere, Agustín Riscos-Núñez, Grzegorz Rozenberg, and Dragoş Sburlan</i>	
A Case Study in (Mem)Brane Computation: Generating Squares of Natural Numbers	233
<i>Nadia Busi and Miguel A. Gutiérrez-Naranjo</i>	
Computing with Genetic Gates, Proteins, and Membranes	250
<i>Nadia Busi and Claudio Zandron</i>	
Classifying States of a Finite Markov Chain with Membrane Computing	266
<i>Mónica Cardona, M. Angels Colomer, Mario J. Pérez-Jiménez, and Alba Zaragoza</i>	
Partial Knowledge in Membrane Systems: A Logical Approach	279
<i>Matteo Cavaliere and Radu Mardare</i>	
Tau Leaping Stochastic Simulation Method in P Systems	298
<i>Paolo Cazzaniga, Dario Pescini, Daniela Besozzi, and Giancarlo Mauri</i>	
P Machines: An Automata Approach to Membrane Computing	314
<i>Gabriel Ciobanu and Mihai Gontineac</i>	
Modeling Dynamical Parallelism in Bio-systems	330
<i>Erzsébet Csuhaj-Varjú, Rudolf Freund, and Dragoş Sburlan</i>	
P Colonies with a Bounded Number of Cells and Programs	352
<i>Erzsébet Csuhaj-Varjú, Maurice Margenstern, and György Vaszil</i>	
P Finite Automata and Regular Languages over Countably Infinite Alphabets	367
<i>Jürgen Dassow and György Vaszil</i>	
Mitotic Oscillators as MP Graphs	382
<i>Giuditta Franco, Pietro Hiram Guzzi, Vincenzo Manca, and Tommaso Mazza</i>	

Infinite Hierarchies of Conformon-P Systems	395
<i>Pierluigi Frisco</i>	
A Protein Substructure Based P System for Description and Analysis of Cell Signalling Networks	409
<i>Thomas Hinze, Thorsten Lenser, and Peter Dittrich</i>	
Characterizations of Some Restricted Spiking Neural P Systems	424
<i>Oscar H. Ibarra and Sara Woodworth</i>	
A Membrane Algorithm for the Min Storage Problem	443
<i>Alberto Leporati and Dario Pagani</i>	
P Systems with Symport/Antiport and Time	463
<i>Hitesh Nagda, Andrei Păun, and Alfonso Rodríguez-Patón</i>	
Towards Probabilistic Model Checking on P Systems Using PRISM	477
<i>Francisco J. Romero-Campero, Marian Gheorghe, Luca Bianco, Dario Pescini, Mario J. Pérez-Jiménez, and Rodica Ceterchi</i>	
Graphical Modeling of Higher Plants Using P Systems	496
<i>Alvaro Romero-Jiménez, Miguel A. Gutiérrez-Naranjo, and Mario J. Pérez-Jiménez</i>	
Identifying P Rules from Membrane Structures with an Error-Correcting Approach	507
<i>José M. Sempere and Damián López</i>	
Computational Completeness of Tissue P Systems with Conditional Uniport	521
<i>Sergey Verlan, Francesco Bernardini, Marian Gheorghe, and Maurice Margenstern</i>	
Distributed Evolutionary Algorithms Inspired by Membranes in Solving Continuous Optimization Problems	536
<i>Daniela Zaharie and Gabriel Ciobanu</i>	
Author Index	555
