Preface to the English Edition

On September 10-13, 1975 Novosibirsk, USSR, a Symposium on Methods for the Implementation of Algorithmic Languages was held, attended by 58 Soviet delegates and 11 from outside the Soviet Union, including 5 Western delegates, invited by Prof. A.P. Ershov, who organised the Symposium.

The Russian edition of the proceedings of this Symposium contained 33 papers; 11 have not been offered for inclusion in the present English publication. Among the papers left out are some that are more tutorial in nature: for others, the reason for their exclusion may be in the technical problems in translating the paper into English and typing it in a camera-ready form. Those readers with a sufficient command of the Russian language are therefore referred to the Russian text of the proceedings, which was printed at the Computing Centre of the Siberian Branch of the Academy of Sciences in Novosibirsk.

The English edition of the proceedings allows an assessment of the state of the art in compiler writing in the Eastern countries, and of the main areas of interest (especially by the choice of Western invitees). I will not try to make such an assessment, but will just mention some of the points that struck me:

- Great interest in translator writing systems.
- Relatively large concern for syntax analysis methods (three papers).
- Unique interest in multi-language translators (four papers, including three on aspects of the BETA System, a combined implementation of PASCAL, PL/1, ALGOL 68 and SIMULAR 67: three more papers on the BETA systems appearing only in the Russian edition).
- Relatively little interest in MOHLLs and SILs (one paper in the proceedings on the Jarmo language).
- Interest in very high level languages.
- Relatively large stress of the fundamental and the formal, rather than a pragmatic approach.
- An earnest desire to form part of the international computing community and good awareness of western professional literature. (witness, e.g., references of papers; in the other direction, the information, or maybe the interest, is much smaller).
- A strong tradition in algorithmic languages (preponderance of ALGOL, leading through the ALPHA language to the BETA system. The FORTRAN problem hardly arises).
- An exemplary faithfulness to language standards (full implementation of internationally accepted language, rather than egotistic subsets, ameliorations or home brew).

A list of the contributors at this symposium is given on page VII.

It is hoped that these proceedings will allow insight in the work being done on compilers in the Soviet Union, and a view of the persons doing it, leading to responsible communication and collaboration between eastern and western scientists.

C.H.A. Koster.

Contents

	Page
Preface to the English Edition C.H.A. KOSTER	III
List of Participants	VII
Problem-oriented Languages and DEPOT Implementing System N. JOACHIM LEHMANN	1
Semantic Attributes Processing in the System DELTA BERNARD LORHO	21
Usability and Portability of a Compiler Writing System OLIVIER LECARME	41
Semantic Unification in a Multi-Language Compiler SERGEI POKROVSKY	63
Procedure Implementation in the Multi-Language Translator V.K. SABELFELD	80
Program Structure Analysis in a Global Optimization V.N. KASYANOV, M.B. TRAKHTENBROT	90
Metalanguage for formal definition of Semantics of Programming Languages I.V. VEL'BITSKIY	105
Some Principles of Compiler Constructions A.L. FUKSMAN	129
Almost Top-Down Analysis for Generalized LR(K) Grammars JAROSLAV KRAL	149
An Approach to the Automation of Constructing Multilanguage Translating Systems M.G. GONTSA	173
Metaalgorithmic System of General Application (MASON) V.L. TEMOV	188
A Simple Translation Automaton Allowing the Generation of Optimized Code P. BRANQUART, J.P. CARDINAEL, J. LEWI, J.P. DELESCAILLE, M. VAN BEGIN	209
Some Automatic Transformations of CF-Grammars ROLAND STROBEL	218
Several Aspects of Theory of Parametric Models of Languages and Parallel Syntactic Analysis G.E. TSEYTLIN, E.L. YUSHCHENKO	231

A Sublanguage of ALGOL 68 and Its Implementation I.O. KERNER	246
A Programming System with Automatic Program Synthesis E.H. TYUGU	251
Experimental Implementation of SETL D.Ya. LEVIN	268
MIDL: A Hybrid Language of Medium Level E. DEAK, M. SHIMASAKI, J. SCHWARTZ	277
The Data Structures Representation in Machine Oriented Higher Level Language B.G. CHEBLAKOV	290
On the Macro Extension of Programming Languages V.Sh. KAUFMAN	301
Pragmatics in a Compiler Production System JAN BOROWIEC	314
CDL-A Compiler Implementation Language C.H.A. KOSTER	341
