H. Ehrig M. Nagl G. Rozenberg
A. Rosenfeld (Eds.)

Graph-Grammars and Their Application to Computer Science

3rd International Workshop
Warrenton, Virginia, USA, December 2–6, 1986

Springer-Verlag

Berlin Heidelberg New York London Paris Tokyo

Fachbereichsbibliothek Informatik

Table of Contents

PART I: Tutorial Introductions

Tutorial introduction to the algebraic approach of graph-grammars H. Ehrig	3
May we introduce to you: hyperedge replacement A. Habel and H.-J. Kreowski	15
An introduction to parallel map generating systems A. Lindenmayer	27
Set theoretic approaches to graph-grammars M. Nagl	41
An introduction to the NLC way of rewriting graphs G. Rozenberg	55
Array grammars A. Rosenfeld	67

PART II: Technical Contributions

Graph grammar based specification of interconnection structures for massively parallel computation D.A. Bailey and J.E. Cuny	73
Towards distributed graph-grammars P. Boehm, H. Ehrig, U. Hummert, and M. Löwe	86
On partially ordered graph-grammars F.J. Brandenburg	99
A representation of graphs by algebraic expressions and its use for graph rewriting systems B. Courcelle	112
On context-free sets of graphs and their monadic second-order theory B. Courcelle	133

Restricting the complexity of regular DNLC languages IJ.J. Aalbersberg, J. Engelfriet, and G. Rozenberg	147
Apex graph-grammars J. Engelfriet, G. Leih, and G. Rozenberg	167
Graph-grammar engineering: A software specification method G. Engels, C. Léwerentz, and W. Schäfer	186
A linguistic formalism for engineering solid modeling P. Fitzhorn	202
Graph-grammars and diagram editing H. Göttler	216
Graphics and their grammars L. Hess and B.H. Mayoh	232
On network algebras and recursive equations G. Hotz, R. Kolla, and P. Molitor	250
ADA-concurrency specified by graph grammars M. Jackel	262
Basic notions of actor grammars: A graph grammar model for actor computation D. Janssens and G. Rozenberg	280
Embedding rule independent theory of graph grammars J. Jeffs	299
Supporting the software development process with attributed NLC graph grammars S.M. Kaplan, S.K. Goering, and R.H. Campbell	309
Practical applications of precedence graph grammars M. Kaul	326
Is parallelism already concurrency? Part 1: Derivations in graph grammars H.-J. Kreowski	343

Is parallelism already concurrency? Part 2: Non sequential processes in graph grammars	
H.-J. Kreowski and A. Wilharm	361
Map OL-systems with edge label control: Comparison of marker and cyclic systems	
M.J.M. de Boer and A. Lindenmayer	378
From OL and IL map systems to indeterminate and determinate growth in plant morphogenesis	
J. Lück and H.B. Lück	393
Fundamentals of edge-label controlled graph grammars	
M.G. Main and G. Rozenberg	411
Parallelism analysis in rule-based systems using graph grammars	
D. Moldovan and F. Parisi-Presicce	427
An efficient algorithm for the solution of hierarchical networks of constraints	
U. Montanari and F. Rossi	440
A software development environment based on graph technology	
M. Nagl	458
Map OL systems with markers	
A. Nakamura, A. Lindenmayer, and K. Aizawa	479
Graph rewriting with unification and composition	
F. Parisi-Presicce, H. Ehrig, and U. Montanari	496
Complexity of pattern generation via planar parallel binary fission/fusion grammars	
J.W. Carlyle, S.A. Greibach, and A. Paz	515
Applications of L-systems to computer imagery	
P. Prusinkiewicz	534
Advances in array languages	
R. Siromoney	549

Rosenfeld's cycle grammars and kolam	
G. Siromoney and R. Siromoney	564
Application of graph grammars in music composing systems	
F. Wankmüller	580
Boundary NLC and partition controlled graph grammars	
E. Welzl	593
