# Preface

Providing Quality of Service (QoS) in the Internet is currently the most challenging topic for researchers, industry and network providers. Now, the only available service in the Internet is the best effort service, which assumes traffic is processed as quickly as possible, but there is no guarantee as to timely or actual delivery. On the other hand, there is pressure to offer new applications in the Internet (like VoIP, videoconferencing, on-line games, e-commerce, etc.) but this requires some packet transfer guarantees from the network (e.g., low packet transfer delay, low packet losses). To meet these requirements, new architectures for providing IP- based QoS in the Internet are proposed: Integrated Services (*IntServ*) and Differentiated Services (*DiffServ*). However, these architectures need some enhancements to provide adequate solutions for resource management, signaling, traffic engineering, traffic handling mechanisms, etc.

In the European research community, a number of projects inside the Fifth Framework Programme were addressed solving the above issues; among these AQUILA (*Adaptive Resource Control for QoS Using an IP-Based Layered Architecture*), CADENUS (*Creation and Deployment of End-User Services in Premium IP Networks*), and TEQUILA (*Traffic Engineering for Quality of Service in the Internet at Large Scale*) are excellent examples. The main achievements from these projects are the prototypes for fixed QoS IP networks. The extension of these proposed solutions into the wireless environment is the next step.

The *Workshop on Architectures for Quality of Service in the Internet*, jointly held with the *Final AQUILA IST Seminar – Art-QoS 2003*, was organized to bring together researchers working on providing Quality of Service for IP-based networks. The intention was to discuss architectural aspects and traffic control mechanisms supporting end-to-end QoS.

The AQUILA project started in January 2000 with 12 partners from 6 European countries (Austria, Finland, Germany, Greece, Italy and Poland). The project has defined a comprehensive framework for the support of QoS in IP-based networks. The proposed solutions were implemented in the form of prototypes and tested at the AQUILA trial sites in Helsinki, Vienna and Warsaw. During the 2003 Workshop two special sessions devoted to AQUILA were held.

# Organization

The Art-QoS 2003 Workshop, jointly held with the Final AQUILA IST Seminar, was organized by the Institute of Telecommunications, Warsaw University of Technology, Poland.

## Program Committee

### Co-chairs

Wojciech Burakowski, Warsaw University of Technology, Poland  
Berthold Koch, Siemens AG, Germany

### Members

Jose Brazio, Telecommunications Institute, Lisbon, Portugal  
Andrzej Dąbrowski, Warsaw University of Technology, Poland  
Franco Davoli, University of Genoa, Italy  
Gerald Eichler, T-Systems Nova, Germany  
Hermann Granzer, Siemens AG, Germany  
Ulrich Hofmann, Salzburg Research, Austria  
Heinrich Hussmann, Dresden University of Technology, Germany  
Laszlo Jereb, Budapest University of Technology and Economics, Hungary  
Yannis Karadimas, Q-Systems, Greece  
Ilkka Norros, VTT Information Technology, Finland  
James Roberts, France Telecom R&D, France  
Stefano Salsano, University of Roma "Tor Vergata," Italy  
Paulo de Sousa, European Commission  
Phuoc Tran-Gia, University of Wuerzburg, Germany  
Iakovos S. Venieris, National Technical University of Athens, Greece  
Manuel Villen Altamirano, Telefonica I+D, Spain  
Józef Woźniak, Technical University of Gdansk, Poland

# Table of Contents

## Architectures for Next Generation Networks

The Evolving Telecommunications Network .....	1
<i>Martin Potts</i>	
An IP QoS Architecture for 4G Networks .....	18
<i>Janusz Gozdecki, Piotr Pacyna, Victor Marques, Rui L. Aguiar, Carlos Garcia, Jose Ignacio Moreno, Christophe Beaujean, Eric Melin, Marco Liebsch</i>	
Integration of Mobility-, QoS-, and CAC-Management for Adaptive Mobile Applications .....	29
<i>Daniel Prokopp, Michael Matthes, Oswald Drobnik, Udo Krieger</i>	

## Architectures and Services

A Control Architecture for Quality of Service and Resource Allocation in Multiservice IP Networks .....	49
<i>Raffaele Bolla, Franco Davoli, Matteo Repetto</i>	
Control Plane Architecture for QoS in OBS Networks Using Dynamic Wavelength Assignment .....	64
<i>Sungchang Kim, JinSeek Choi, Minho Kang</i>	
IP Services Market: Modelling, Research, and Reality .....	76
<i>Piotr Arabas, Mariusz Kamola, Krzysztof Malinowski</i>	

## Signalling

Prototype Implementation for the Analysis of SIP, RSVP and COPS Interoperability .....	88
<i>Tien Van Do, Barnabás Kálmán, Csaba Király, Zsolt Pándi</i>	
Reinforcement Learning as a Means of Dynamic Aggregate QoS Provisioning .....	100
<i>Nail Akar, Cem Sahin</i>	

## Admission Control

Calculating End-to-End Queuing Delay for Real-Time Services on an IP Network .....	115
<i>Robert E. Kooij, Olaf Østerbø, J.C. van der Wal</i>	

Admission Control Method Based on Effective Delay for Flows Using EF PHB .....	127
<i>Marcin Narloch, Sylwester Kaczmarek</i>	

QoS Provisioning for VoIP Traffic by Deploying Admission Control .....	139
<i>Hung Tuan Tran, Thomas Ziegler, Fabio Ricciato</i>	

## **AQUILA: Resource Control**

Overview of the Project AQUILA (IST-1999-10077) .....	154
<i>Bert F. Koch, Heinrich Hussmann</i>	

Application Support by QoS Middleware .....	165
<i>Falk Kemmel, Sotiris Maniatis, Anne Thomas, Charilaos Tsetsekas</i>	

BGRP Plus: Quiet Grafting Mechanisms for Providing a Scalable End-to-End QoS Solution .....	177
<i>Eugenia Nikolouzou, Petros Sampatakis, Lila Dimopoulou, Stefano Salsano, Iakovos S. Venieris</i>	

## **AQUILA: QoS at Work**

Measurement-Based Admission Control in the AQUILA Network and Improvements by Passive Measurements .....	189
<i>Marek Dąbrowski, Felix Strohmeier</i>	

An Implementation of a Service Class Providing Assured TCP Rates within the AQUILA Framework .....	203
<i>Christof Brandauer, Peter Dorfinger</i>	

Evaluation of the AQUILA Architecture: Trial Results for Signalling Performance, Network Services and User Acceptance .....	218
<i>Marek Dąbrowski, Gerald Eichler, Monika Fudala, Dietmar Katzensgruber, Tero Kilkanen, Natalia Miettinen, Halina Tarasiuk, Michael Titze</i>	

## **MPLS Traffic Engineering**

CSPF Routed and Traffic-Driven Construction of LSP Hierarchies .....	234
<i>Michael Menth, Andreas Reifert, Jens Milbrandt</i>	

Load Balancing by MPLS in Differentiated Services Networks .....	252
<i>Riikka Susitaival, Jorma Virtamo, Samuli Aalto</i>	

## **Traffic Control Mechanisms**

An Integrated Scheduling for Multiple Loss Priority Traffic in E-PON OLT Switches .....	265
<i>Myoung Hun Kim, Hong Shik Park</i>	

Differentiation and Interaction of Traffic: A Flow Level Study .....	276
<i>Eeva Nyberg, Samuli Aalto</i>	
Application-Oriented Evaluation of Measurement Estimation .....	291
<i>Adam Wierzbicki, Lars Burgstahler</i>	
<b>Author Index</b> .....	305
