Preface

The term “grid computing” is based on an analogy with the electrical power grid: computing capabilities should be ubiquitous and easy to use. While the development of what we now call grid computing is, in many ways, part of a natural progression of work done in the last decade, what’s special about it is that all of its enabling technologies are converging at once: (1) a widely deployed, network infrastructure will connect virtually every device in the world, (2) an interface technology is widely understood and embraced by virtually every segment of science, technology, commerce, and society, and (3) there is a widespread, and growing, understanding of the properties, capabilities, and services that are necessary and *possible* to utilize this infrastructure. Information services and resource brokers will allow the dynamic sharing of resources for applications large and small and enable virtual organizations. These properties, capabilities, and services will be used in different contexts to enable different styles of computing such as Internet computing and Peer-to-Peer computing. To facilitate the adoption of standard practices, the Global Grid Forum (www.gridforum.org) was formed to identify common requirements and push for eventual standardization.

The phenomenal growth of grid computing and related topics has created the need for this workshop as a venue to present the latest research. This year’s workshop builds on the success of last year’s. Grid 2000, chaired by Rajkumar Buyya and Mark Baker, was held in conjunction with HiPC 2000, in Bangalore, India, and attracted participants from 15 countries. This year’s workshop was held in conjunction with Supercomputing 2001, the world’s premier meeting for high-performance computing. We sincerely thank Sally Haerer, David Culler, and Ian Foster for making this happen.

This year’s Program Committee represented 12 countries on 4 continents and authors submitted papers from 7 countries on 3 continents. This certainly attests to the wide-spread, international importance of grid computing. We heartily thank all of the authors and the members of the Program Committee. It is the contribution of their valuable time and effort that has made this workshop a success. A very special thanks is extended to Dennis Gannon for his stimulating keynote address. Dennis has a long history of identifying the important issues and clearly elucidating them.

We thank our sponsors, the ACM, the IEEE, the IEEE Computer Society, the IEEE Task Force on Cluster Computing, and also Supercomputing 2001 for making the workshop and these proceedings possible. We are very grateful to Prof. Cauligi Raghavendra and Prof. Viktor Prasanna for allowing Grid 2001 to host its web site at the University of Southern California. Using WIMPE from Dartmouth College for managing the workshop through the web site from wherever I was proved to be invaluable. (Just make sure no other project fills up the disk partition with /tmp. ;-) We also wish to thank Jan van Leeuwen of Utrecht University (LNCS Series Editor) and Alfred Hofmann of Springer-Verlag

(Executive Editor) for publishing the proceedings. A special thanks goes to Anna Kramer of Springer-Verlag (Computer Science Editorial Assistant). Her prompt help made perfecting these proceedings as easy as `\addtocounter{one}{2+3}`.

Finally we wish to thank all who attended Grid 2001 in Denver. We now invite you to study these proceedings and their contribution to the further development of grid computing.

Craig A. Lee

The Aerospace Corporation, El Segundo, California, USA

Program Committee

David Abramson, Monash University, Australia

Ishfaq Ahmad, The Hong Kong University of Science and Technology, China

Giovanni Aloisio, University of Lecce, Italy

Ruth Aydt, University of Illinois, Urbana-Champaign, USA

David Bader, University of New Mexico, USA

Mark Baker, University of Portsmouth, UK

Rajkumar Buyya, Monash University, Australia

Henri Casanova, University of California, San Diego, USA

Steve Chapin, Syracuse University, USA

Frederica Darema, National Science Foundation, USA

Jack Dongarra, University of Tennessee/ORNL, USA

Wolfgang Gentzsch, Sun Microsystems, USA

Jonathan Giddy, Monash University, Australia

Sergi Girona, Polytechnic University of Catalunya, Spain

Ken Hawick, University of Wales, UK

Hai Jin, Huazhong University of Science and Technology, China

William Johnston, Lawrence Berkeley National Laboratory, USA

Domenico Laforenza, Institute of the Italian National Research Council, Italy

Gregor von Laszewski, Argonne National Laboratory, USA

Miron Livny, University of Wisconsin, USA

Satoshi Matsuoka, Tokyo Institute of Technology, Japan

Jarek Nabrzyski, Poznań Supercomputing and Networking Center, Poland

Lalit Patnaik, Indian Institute of Science, India

Thierry Priol, IRISA/INRIA, France

Alexander Reinefeld, ZIB, Germany

Mitsuhiro Sato, Real World Computing Partnership, Japan

Peter Sloot, University of Amsterdam, The Netherlands

Alan Sussman, University of Maryland, USA

Domenico Talia, ISI-CNR, Italy

Yoshio Tanaka, NIAIST, Japan

Mary Thomas, San Diego Supercomputing Center, USA

Brian Tierney, Lawrence Berkeley National Laboratory, USA

Additional Referees

Vishwanath P. Baligar, Indian Institute of Science, India

Christian Pérez, INRIA, France

Alexandre Denis, INRIA, France

Dave DiNucci, Elepar, USA

Jason R. Mastaler, Albuquerque High Performance Computing Center, USA

Florian Schintke, ZIB, Germany

Otto Sievert, University of California, San Diego, USA

James Stepanek, The Aerospace Corporation, USA

Table of Contents

Invited Presentation

Grid Application Design Using Software Components and Web Services . . .	1
<i>Dennis Gannon</i>	

Object Middleware

Design and Implementation of a CORBA Commodity Grid Kit	2
<i>Snigdha Verma, Manish Parashar, Jarek Gawor, Gregor von Laszewski</i>	
Towards High Performance CORBA and MPI Middlewares for Grid Computing	14
<i>Alexandre Denis, Christian Pérez, Thierry Priol</i>	
An Integrated Grid Environment for Component Applications	26
<i>Nathalie Furmento, Anthony Mayer, Stephen McGough, Steven Newhouse, Tony Field, John Darlington</i>	

Resource Discovery and Management

KNOWLEDGE GRID: High Performance Knowledge Discovery on the Grid	38
<i>Mario Cannataro, Domenico Talia, Paolo Trunfio</i>	
On Fully Decentralized Resource Discovery in Grid Environments	51
<i>Adriana Iamnitchi, Ian Foster</i>	
An Adaptive Service Grid Architecture Using Dynamic Replica Management	63
<i>Byoung-Dai Lee, Jon B. Weissman</i>	
Identifying Dynamic Replication Strategies for a High-Performance Data Grid	75
<i>Kavitha Ranganathan, Ian Foster</i>	

Scheduling

Ensemble Scheduling: Resource Co-Allocation on the Computational Grid	87
<i>Jon B. Weissman, Pramod Srinivasan</i>	
JobQueue: A Computational Grid-Wide Queuing System	99
<i>Dimitrios Katramatos, Marty Humphrey, Andrew Grimshaw, Steve Chapin</i>	

A Scheduling Model for Grid Computing Systems 111
Anuraag Sarangi, Alok Shriram, Avinash Shankar

Grid Architecture and Policies

Exposed vs. Encapsulated Approaches to Grid Service Architecture 124
Micah Beck, Terry Moore, James S. Plank

A Methodology for Account Management in Grid Computing
Environments 133
Thomas J. Hacker, Brian D. Athey

Policy Engine: A Framework for Authorization, Accounting Policy
Specification and Evaluation in Grids 145
Babu Sundaram, Barbara M. Chapman

Performance and Practice

Performance Contracts: Predicting and Monitoring Grid Application
Behavior 154
Frederik Vraalsen, Ruth A. Aydt, Celso L. Mendes, Daniel A. Reed

Production-Level Distributed Parametric Study Capabilities for the Grid 166
Maurice Yarrow, Karen M. McCann, Edward Tejnil, Adrian DeVivo

The D0 Experiment Data Grid - SAM 177
*Lee Lueking, Lauri Loebel-Carpenter, Wyatt Merritt, Carmenita Moore,
Ruth Pordes, Igor Terekhov, Sinisa Veseli, Matt Vranicar, Steve White,
Vicky White*
