Preface

Artificial Intelligence (AI) is one of the most fascinating and unusual areas of academic study to have emerged this century, with its ultimate goal as the complete understanding and replication of human cognition, perception, and behavior.

This daring and challenging objective has given rise to controversial opinions about the field. For some, AI is a true scientific discipline, that has made important and fundamental contributions to the use of computation for our understanding of the nature and phenomena of the human mind. For others, AI is the black art of computer science.

It is not our intention to contribute to the AI debate. Our belief is that AI has led to a range of important results and techniques, which have significantly enriched the computer science field. In addition, AI can justifiably claim to have built bridges and contributed to other disciplines, of which philosophy, cognitive science, and logic are obvious examples.

The main motivating purpose of this book was to provide a showcase for the field of AI as it stands today. Twenty years ago it would have been realistic to present a survey of the entire field in a single book. Today, given the extremely wide range of issues addressed within AI, this would clearly be impossible. Instead, we aim at giving the reader a taste of the problems attacked and the solutions developed by contemporary AI researchers. We have not attempted to be comprehensive, but include both “traditional” areas of study, such as theorem proving, as well as ones that have emerged more recently, such as agents, AI and the Internet, and synthetic characters. The chapters themselves are a mixture of specialised research papers and authoritative survey papers.

The secondary purpose of this book is to celebrate Springer-Verlag’s *Lecture Notes in Artificial Intelligence* (LNAI) series. LNAI volumes provide a rapid, low-cost way of publishing and disseminating research results, and as such the series provides an important service for the AI community.

We hope that the quality of the articles contained in this volume, written as they are by some of the finest researchers in the field, will contribute to an increased understanding of the significant advances that AI brings to the scientific world.

June 1999

Michael Wooldridge
Manuela Veloso

Acknowledgements

We would like to extend our deepest thanks to the area editors who solicited the articles contained in this book:

Jim Blythe	(USA)
Paolo Ciancarini	(Italy)
Michael Fisher	(UK)
Werner Nutt	(Germany)
Simon Parsons	(UK)
Paolo Petta	(Austria)

In addition, thanks to all the authors for preparing and contributing their manuscripts.

Contents

Behavioural Virtual Agents	1
Ruth Aylett	
Logic-Based Knowledge Representation	13
Franz Baader	
A Taxonomy of Theorem-Proving Strategies	43
Maria Paola Bonacina	
An Overview of Planning Under Uncertainty	85
Jim Blythe	
Knowledge Representation for Stochastic Decision Processes	111
Craig Boutilier	
A Survey of Automated Deduction	153
Alan Bundy	
The World Wide Web as a Place for Agents	175
P. Ciancarini, Robert Tolksdorf, and F. Vitali	
Lifelike Pedagogical Agents and Affective Computing:	
An Exploratory Synthesis	195
Clark Elliott, Jeff Rickel, and James Lester	
OBDD-based Universal Planning: Specifying and Solving	
Planning Problems for Synchronized Agents in	
Non-deterministic Domains	213
Rune M. Jensen and Manuela M. Veloso	
Combining Artificial Intelligence and Databases for	
Data Integration	249
Alon Y. Levy	
“Underwater Love”: Building Tristão and Isolda’s Personalities	269
Carlos Martinho and Ana Paiva	
An Oz-Centric Review of Interactive Drama and	
Believable Agents	297
Michael Mateas	
Robots with the Best of Intentions	329
S. Parsons, O. Pettersson, A. Saffiotti, and M. Wooldridge	
Agent-Based Project Management	339
Charles Petrie, Sigrid Goldmann, and Andreas Raquet	
A System for Defeasible Argumentation, with	
Defeasible Priorities	365
Henry Prakken and Giovanni Sartor	
Handling Uncertainty in Control of Autonomous Robots	381
Alessandro Saffiotti	

The Event Calculus Explained	409
Murray Shanahan	
Towards a Logic Programming Infrastructure for Internet Programming	431
Paul Tarau and Veronica Dahl	
Towards Autonomous, Perceptive, and Intelligent Virtual Actors	457
Daniel Thalmann and Hansrudi Noser	
Temporally Invariant Junction Tree for Inference in Dynamic Bayesian Network	473
Y. Xiang	
Author Index	489
