## PREFACE

The International Workshop CG'88 on "Computational Geometry" was held at the University of Würzburg (West Germany), March 24-25, 1988.

Previous meetings of a smaller and much more regional kind were organized 1983 in Zürich (J. Nievergelt), 1984 in Bern (W. Nef, H. Bieri) and 1985 in Karlsruhe (A. Schmitt, H. Müller).

As the interest in the fascinating field of Computational Geometry and its Applications has grown very quickly in recent years we felt the need to have a workshop, where a suitable number of invited participants could concentrate their efforts in this field to cover a broad spectrum of topics and to communicate in a stimulating atmosphere.

This workshop was attended by some fifty invited scientists. The scientific program consisted of 22 contributions, of which 18 papers with one additional paper (M. Reichling) are contained in the present volume.

The contributions covered important areas not only of fundamental aspects of Computational Geometry but a lot of interesting and most promising applications:

- Algorithmic Aspects of Geometry
- Arrangements
- Nearest-Neighbor-Problems and Abstract Voronoi-Diagrams
- Data Structures for Geometric Objects
- Geo-Relational Algebra
- Geometric Modeling
- Clustering and Visualizing Geometric Objects
- Finite Elements Methods, Triangulating in Parallel,
- Animation and Ray Tracing
- Robotics: Motion Planning, Collision Avoidance
- Visibility
- Smooth Surfaces
- Basic Models of Geometric Computations
- Automatizing Geometric Proofs and Constructions.

#### IV

The scientific program was accompanied by presentations of some Graphics- and CAD-software systems (University of Karlsruhe and Würzburg) which attracted similar interest to the demonstration of a computer assisted course on "Geometric Algorithms" (by Th. Ottmann and his coauthors, University of Freiburg).

I am very indebted to all participants of the workshop and especially to all contributors to this volume.

Thanks are also due to Hugo Heusinger, who carried much of the burden of preparing the workshop, and to all my fellows and staff members of Lehrstuhl für Informatik I, who did their best for a smooth local organization.

Last but not least I owe thanks to Springer-Verlag and to Dr. Hans Wössner for their support.

Würzburg, July 1988

Hartmut Noltemeier

## CONTENTS

|   |     |
|---|-----|
| Using Graphical Information From a Grid File's Directory<br>to Visualize Patterns in Cartesian Product Spaces<br><i>H. Hinterberger (Swiss Federal Institute of Technology Zürich)</i>                                    | 1   |
| Twin Grid Files: A Performance Evaluation<br><i>A. Huflesz, P. Widmayer (University of Karlsruhe)</i><br><i>H.-W. Six (University of Hagen)</i>   | 15  |
| On Separable and Rectangular Clusterings<br><i>H. Heusinger, H. Noltemeier (University of Würzburg)</i>   | 25  |
| A Sweep Algorithm for the All-Nearest-Neighbors Problem<br><i>K. Hinrichs (Asea Brown Boveri, Baden, Switzerland)</i><br><i>J. Nievergelt, P. Schorn (University of North Carolina, Chapel Hill, USA)</i>                 | 43  |
| On Continuous Homotopic One Layer Routing (Extended Abstract)<br><i>S. Gao, M. Kaufmann, K. Mehlhorn, W. Rülling, C. Storb</i><br><i>(University of Saarland)</i><br><i>M. Jerrum (University of Edinburgh, Scotland)</i> | 55  |
| Point Location in Arrangements (Extended Abstract)<br><i>S. Meiser (University of Saarland)</i>   | 71  |
| Internal and External Algorithms for the Points-in-Regions Problem -<br>the Inside Join of Geo-Relational Algebra (Extended Abstract)<br><i>G. Blankenagel, R. H. Güting (University of Dortmund)</i>                     | 85  |
| Geo-Relational Algebra: A Model and Query Language for Geometric<br>Database Systems (Extended Abstract)<br><i>R. H. Güting (University of Dortmund)</i>  | 90  |
| Elementary Set Operations with d-Dimensional Polyhedra<br><i>H. Bierl, W. Nef (University of Bern, Switzerland)</i>   | 97  |
| A Divide-and-Conquer Algorithm for Computing 4-Dimensional<br>Convex Hulls<br><i>C. E. Buckley (Swiss Federal Institute of Technology Zürich)</i>   | 113 |

## VI

|   |     |
|---|-----|
| Triangulating a Monotone Polygon in Parallel<br><i>H. Wägener (Technical University of Berlin)</i>                    | 136 |
| Abstract Voronoi Diagrams and their Applications (Extended Abstract)<br><i>R. Klein (University of Freiburg)</i>      | 148 |
| Geometric Modeling of Smooth Surfaces<br><i>H. Hagen (University of Kaiserslautern)</i>                               | 158 |
| Collision Avoidance for Nonrigid Objects (Extended Abstract)<br><i>S. Abramowski (University of Karlsruhe)</i>        | 168 |
| On the Detection of a Common Intersection of $k$ Convex Polyhedra<br><i>M. Reichling (University of Würzburg)</i>     | 180 |
| Time Coherence in Computer Animation by Ray Tracing (Extended Abstract)<br><i>H. Müller (University of Karlsruhe)</i> | 187 |
| Using Gale Transforms in Computational Geometry<br><i>F. Aurenhammer (Technical University of Graz, Austria)</i>      | 202 |
| Geometrical Abstract Automata<br><i>U. Hucksbeck (University of Würzburg)</i>   | 217 |
| Automatizing Geometric Proofs and Constructions<br><i>B. Brüderlin (Swiss Federal Institute of Technology Zürich)</i> | 232 |
