### Foreword

The articles in this volume are revised versions of some of the papers presented at the Fifth Workshop on Languages and Compilers for Parallel Computing that took place in August, 1992 at Yale University in New Haven. The previous workshops in this series were held in Santa Clara (1991), Irvine (1990), Urbana (1989) and Ithaca (1988). We strove as in previous years for a reasonable cross-section of some of the best work in the field, and the papers in this volume show that we succeeded fairly well.

Thanks are due to many people for making the workshop and this volume a success: above all to Chris Hatchell, who provided the organizational and administrative glue that held the whole enterprise together. It's striking how little computers can achieve when all is said and done, and how much everything comes down (as it always has) to the right people working hard.

## Contents

Compilation of a Highly Parallel Actor-Based Language
A Concurrent Execution Semantics for Parallel Program Graphs 1 and Program Dependence Graphs V. Sarkar, IBM Palo Alto Scientific Center, Palo Alto, California
Using Profile Information to Assist Advanced Compiler
A Hierarchical Parallelizing Compiler for VLIW/MIMD Machines 49 C. Brownhill and A. Nicolau, University of California at Irvine
Dynamic Dependence Analysis: A Novel Method for Data
On the Feasibility of Dynamic Partitioning of Pointer Structures 83  J. Solworth, University of Illinois at Chicago
Compiler Analysis for Irregular Problems in Fortran D
Data Ensembles in Orca C
Compositional C++: Compositional Parallel Programming

Data Parallelism and Linda
Techniques for Efficient Execution of Fine-Grained Concurrent 160 Programs A. Chien, W. Feng, V. Karamcheti, and J. Plevyak University of Illinois at Urbana-Champaign
Computing Per-Process Summary Side-Effect Information
Supporting SPMD Execution for Dynamic Data Structures
Determining Transformation Sequences for Loop Parallelization
Compiler Optimizations for Massively Parallel Machines:
Handling Distributed Data in Vienna Fortran Procedures
On the Synthesis of Parallel Programs from Tensor Product
Collective Loop Fusion for Array Contraction

Parallel Hybrid Data Flow Algorithms: A Case Study
A Control-Parallel Programming Model Implemented on SIMD 311 Hardware H. Dietz and W. Cohen, Purdue University, West Lafayette, Indiana
C**: A Large-Grain, Object-Oriented, Data-Parallel Programming 326 Language J. Larus, University of Wisconsin at Madison
A Calculus of Gamma Programs
A Linda-Based Runtime System for a Distributed Logic Language 356 P. Ciancarini, <i>University of Bologna, Bologna, Italy</i>
Parallelizing a C Dialect for Distributed Memory MIMD Machines 369 O. Lempel, S. Pinter, and E. Turiel Technion — Israel Institute of Technology, Haifa, Israel
A Singular Loop Transformation Framework Based on Non-Singular 391 Matrices W. Li and K. Pingali, Cornell University, Ithaca, New York
Designing the McCAT Compiler Based on a Family of Structured 406 Intermediate Representations  L. Hendren, C. Donawa, M. Emami, G. Gao, Justiani, and B. Sridharan McGill University, Montréal, Québec, Canada
Doany: Not Just Another Parallel Loop

	ta Dependence and Data-Flow Analysis of Arrays
	Stanford University, Stanford, California
Ex	perience with Techniques for Refining Data Race Detection 449 R. Netzer, Brown University, Providence, Rhode Island B. Miller, University of Wisconsin at Madison
Ext	nending the Banerjee-Wolfe Test to Handle Execution Conditions 464 D. Klappholz, Stevens Institute of Technology, Hoboken, New Jersey X. Kong, Sun Microsystems, Inc., Mountain View, California
	FORTRAN Compiling Method for Dataflow Machines and Its 482 stotype Compiler for the Parallel Processing System -Harray-T. Yasue, H. Yamana, and Y. Muraoka Waseda University, Tokyo, Japan
	tributed Slicing and Partial Re-execution for Distributed
	Program's Eye View of Miprac
Cor	nbolic Program Analysis and Optimization for Parallelizing
	lizing New Communication Features in Compilation for 563
