Foreword

Knowledge representation (KR) has been a central area of research ever since work in Artificial Intelligence began some forty years ago. While there was no consensus on the theoretical underpinnings of KR until the late seventies, the situation has changed drastically over the past fifteen years with the formal logic-based approach being the clear winner. Today KR presents itself as a mature discipline with its own first rate conferences like the biannual *International Conference on Principles of Knowledge Representation and Reasoning*.

This collection of papers presents state-of-the-art research results on the foundations of KR combined with two survey articles, one by the editors intended as a guide to this book and another by Shoham and Cousins on mental attitudes. Except for the surveys, the papers grew out of a workshop on *Theoretical Foundations of Knowledge Representation and Reasoning*, which we organized in conjunction with the *10th European Conference on Artificial Intelligence (ECAI-92)* in August 1992 in Vienna.

We are very grateful to Gerd Brewka (GMD, Germany), Maurizio Lenzerini (Rome, Italy), and Wolfgang Nejdl (Aachen, Germany), who served as members of the programme committee of the ECAI-workshop helping us select the best papers from a large number of submissions. We thank the authors for their hard work and patience in waiting for this book to appear. We also thank the ECAI-92 organizers, in particular Gerhard Widmer, for their help in making the initial workshop happen and Springer-Verlag for their professional support in the publication of this volume.

Finally, *Internet* deserves a special thanks as well. Without it the organization of the workshop and the preparation of this book would have been all but impossible.

Contents

Foundations of Knowledge Representation and Reasoning <i>Gerhard Lakemeyer, Bernhard Nebel</i>	1
Collective Entities and Relations in Concept Languages <i>Jürgen Allgayer, Enrico Franconi</i>	13
Computing Extensions of Terminological Default Theories <i>Franz Baader, Bernhard Hollunder</i>	30
A Formalization of Interval-Based Temporal Subsumption in First Order Logic <i>Claudio Bettini</i>	53
Normative, Subjunctive and Autoepistemic Defaults <i>Craig Boutilier</i>	74
Abductive Reasoning with Abstraction Axioms <i>Luca Console, Daniele Theseider Dupré</i>	98
Queries, Rules and Definitions as Epistemic Sentences in Concept Languages <i>Francesco M. Donini, Maurizio Lenzerini, Daniele Nardi, Werner Nutt, Andrea Schaerf</i>	113
The Power of Beliefs or Translating Default Logic into Standard Autoepistemic Logic <i>Georg Gottlob</i>	133
Learning an Optimally Accurate Representation System <i>Russell Greiner, Dale Schuurmans</i>	145
Default Reasoning via Negation as Failure <i>A.C. Kakas</i>	160
Weak Autoepistemic Reasoning and Well-Founded Semantics <i>Jürgen Kalinski</i>	179
Forming Concepts for Fast Inference <i>Henry Kautz, Bart Selman</i>	200
A Common-Sense Theory of Time <i>Yuen Q. Lin</i>	216

Reasoning with Analogical Representations <i>Karen L. Myers, Kurt Konolige</i>	229
Asking About Possibilities – Revision and Update Semantics for Subjunctive Queries <i>Wolfgang Nejdl, Markus Banagl</i>	250
On the Impact of Stratification on the Complexity of Nonmonotonic Reasoning <i>Ilkka Niemelä, Jussi Rintanen</i>	275
Logics of Mental Attitudes in AI <i>Yoav Shoham, Steve B. Cousins</i>	296
Hyperrational Conditionals – Monotonic Reasoning About Nested Default Conditionals <i>Emil Weydert</i>	310
Revision by Expansion in Logic Programs <i>Cees Witteveen, Catholijn Jonker</i>	333
