Preface

The general theme of this series of conferences is the use of crisp, clear mathematics in the discovery and design of algorithms and in the development of corresponding software or hardware. The previous two conferences were held in 1989 at Twente, Netherlands, organised by the Rijksuniversiteit Groningen, and in 1992 at Oxford, United Kingdom. The conference theme reflects the growing interest in formal, mathematically based methods for the construction of software and hardware. The goal of the MPC conferences is to report on and significantly advance the state of the art in this area.

The emphasis is on the combination of *conciseness* and *precision* in *calculational techniques* for program construction. Typical areas are:

- formal specification of sequential and concurrent programs;
- constructing implementations to meet specifications;

in particular,

- program transformation;
- program analysis;
- program verification;
- convincing case studies.

The scientific programme for this third conference in the MPC series consisted of five invited lectures by distinguished international researchers and 19 contributed lectures selected by the programme committee out of 58 submissions. They were arranged into sessions with the following titles: Semantics and Verification, Refinement, Particular Calculi, Algebra of Data Structures, Applications, Programs and their Proofs, Verification and Construction of Parallel Programs and Support Systems. Overall, we witnessed significant progress in raising the level of abstraction, in simplifying the support calculi and in the treatment of the notoriously difficult subject of parallel programs.

The conference took place July 17–21, 1995 at Kloster Irsee, a former Baroque monastery located in the Southwest of Bavaria, Germany, close to the Alps. We gratefully acknowledge sponsorship by the Deutsche Forschungsgemeinschaft, the Society of the Friends of the University of Augsburg, Esprit Working Group 8533 NADA — New Hardware Design Methods, IBM Germany, sd&m (software design & management) Munich and Pandasoft Berlin. Finally, I would like to thank the programme committee members for their responsible and timely collaboration, Martin Russling for his assistance in preparing the final manuscript and Andrea Haupteltshofer for her help as Conference Secretary.

Augsburg, July 1995

Bernhard Möller

PROGRAMME COMMITTEE

Ralph-Johan Back	Finland
Roland Backhouse	Netherlands
Geoff Dromey	Australia
David Gries	USA
Ian Hayes	Australia
Rick Hehner	Canada
Wim Hesselink	Netherlands
Gerard Huet	France
Cliff Jones	UK
Anne Kaldewaij	Netherlands
Lambert Meertens	Netherlands
Bernhard Möller	Germany (Chair)
Oege de Moor	UK
Carroll Morgan	UK
Helmut Partsch	Germany
Ross Paterson	UK
Christine Paulin-Mohring	France
Peter Pepper	Germany
Wolfgang Reif	Germany
Beverly Sanders	Switzerland
Fred Schneider	USA
Mary Sheeran	Sweden
Doug Smith	USA
Wlad Turski	Poland

Table of Contents

Invited Lectures

<i>Towards automatic parallelization of logic programs</i> K.R. Apt	1
<i>Functional algorithm design</i> R.S. Bird	2
<i>Mathematics of software engineering</i> M. Broy	18
<i>Program construction in intuitionistic type theory</i> T. Coquand	49
<i>Computer-aided computing</i> N. Shankar	50

Contributed Lectures

<i>Derivation of parallel algorithms from functional specifications to CSP processes</i> A.E. Abdallah	67
<i>Architecture independent massive parallelization of divide-and-conquer algorithms</i> K. Achatz, W. Schulte	97
<i>Exploring summation and product operators in the refinement calculus</i> R.-J.R. Back, M. Butler	128
<i>An action system specification of the Caltech asynchronous microprocessor</i> R.-J.R. Back, A.J. Martin, K. Sere	159
<i>Formal derivation of CSP programs from temporal specifications</i> R. Berghammer, B. von Karger	180
<i>A compositional proof system for asynchronously communicating processes</i> F.S. de Boer, M. van Hulst	197
<i>A graphical calculus</i> S. Curtis, G. Lowe	214

<i>A simple, efficient, and flexible implementation of flexible arrays</i> V.J. Dielissen, A. Kaldewaij	232
<i>Induction and recursion on datatypes</i> H. Doornbos, R. Backhouse	242
<i>Program construction by parts</i> M. Frappier, A. Mili, J. Desharnais	257
<i>An initial-algebra approach to directed acyclic graphs</i> J. Gibbons	282
<i>Algebraic proof assistants in HOL</i> R. Groenboom, C. Hendriks, I. Polak, J. Terlouw, J. Tijmen Udding	304
<i>Angelic termination in Dijkstra's calculus</i> W.H. Hesselink	322
<i>Extracting programs with exceptions in an impredicative type system</i> J.-F. Monin	335
<i>Synthesizing proofs from programs in the calculus of inductive constructions</i> C. Parent	351
<i>A general scheme for breadth-first graph traversal</i> M. Russling	380
<i>SPECWARE: Formal support for composing software</i> Y. V. Srinivas, R. Jüllig	399
<i>A refinement relation supporting the transition from unbounded to bounded communication buffers</i> K. Stølen	423
<i>ImpUNITY: UNITY with procedures and local variables</i> R. T. Udink, J. N. Kok	452
