Foreword

A new class of models, formalisms, and mechanisms for describing concurrent and distributed computations has emerged over the last few years. A characteristic feature of members of this class is that they are based on (generative) communication via a shared data space. They are called *coordination* languages and models.

This volume contains the proceedings of the First International Conference on Coordination Models and Languages (COORDINATION'96), held in Cesena (Italy) 15-17 April 1996.

In response to the call for papers, 78 papers were submitted to COORDINATION'96. All submitted papers were reviewed by at least 3 reviewers. The programme committee met at Imperial College (London) on 11 December 1995 and selected 21 regular papers. A further 10 papers were selected as short papers, to be presented at a poster session; these are included in this volume after the regular papers.

The programme committee invited Jean-Pierre Banâtre, Ugo Montanari, and Peter Wegner to give invited talks; these are included in this volume before the regular papers.

We thank all members of the programme committee and their sub-referees; they are listed on the following pages. We would also like to thank Roberto Gorrieri, the local arrangements chairperson, and Juarez Muylaert Filho and David Cohen for their assistance in processing the referees' reports. The following organisations provided sponsorship for the conference: Fondazione Cassa di Risparmio di Cesena, Italian National Research Council (C.N.R.), Comune di Cesena, Provincia di Forlì-Cesena, Olidata, Sun Microsystems, Silicon Graphics, Ascom TCS Safnat S.p.A., Link s.r.l., Libreria Minerva, and Cremonini Fabio s.r.l.. Finally, we would not have had the inspiration for arranging this conference had it not been for the EU-funded project COORDINATION; the project has provided partial financial support for a number of the European programme committee members.

April 1996

Contents

Invited Papers

Parallel Multiset Processing: From Explicit Coordination to Chemical Reaction <i>J.-P. Banâtre</i>	1
Graph Rewriting and Constraint Solving for Modelling Distributed Systems with Synchronization <i>U. Montanari and F. Rossi</i>	12
Coordination as Constrained Interaction <i>P. Wegner</i>	28

Regular Papers

The IWIM Model for Coordination of Concurrent Activities <i>F. Arbab</i>	34
Sonia: an Adaptation of Linda for Coordination of Activities in Organizations <i>M. Banville</i>	57
The ToolBus Coordination Architecture <i>J. A. Bergstra and P. Klint</i>	75
Enhancing Coordination and Modularity Mechanisms for a Language with Objects-as-Multisets <i>S. Castellani and P. Ciancarini</i>	89
Towards a Compositional Method for Coordinating Gamma Programs <i>M. Chaudron and E. de Jong</i>	107
Introducing a Calculus for Higher-Order Multiset Programming <i>D. Cohen and J. Muglaert-Filho</i>	124
μ^2 Log : Towards Remote Coordination <i>K. De Bosschere and J.-M. Jacquet</i>	142
A Process Algebra Based on Linda <i>R. De Nicola and R. Pugliese</i>	160
Intra- and Inter-Object Coordination with MESSENGERS <i>M. Fukuda, L. F. Bic, M. B. Dillencourt and F. Merchant</i>	179

Ariadne and HOPLa: Flexible Coordination of Collaborative Processes <i>G. Florijn, T. Besamusca and D. Greefhorst</i>	197
Coordination in the ImpUnity Framework <i>H. J. M. Goeman, J. N. Kok, K. Sere and R.T. Udink</i>	215
Compiler Correctness for Concurrent Languages <i>D. S. Gladstein and M. Wand</i>	231
A Software Environment for Concurrent Coordinated Programming <i>A. A. Holzbacher</i>	249
Designing a Coordination Model for Open Systems <i>T. Kielmann</i>	267
CCE: A Process-Calculus Based Formalism for Specifying Multi-Object Coordination <i>M. Mukherji and D.Kafura</i>	285
An Extensible Framework for the Development of Coordinated Applications <i>E. Denti, A. Omicini, A. Natali and M. Venuti</i>	305
Broadcasting in Time <i>K. V. S. Prasad</i>	321
Semantics of a Higher-Order Coordination Language <i>M. Radestock and S. Eisenbach</i>	339
Solving the Linda Multiple rd Problem <i>A. Rowstron and A. Wood</i>	357
Coordinating Distributed Objects with Declarative Interfaces <i>N. Singh and M. A. Gisi</i>	368
Coordinating Services in Open Distributed Systems with LAURA <i>R. Tolksdorf</i>	386

Short Papers

Visifold: A Visual Environment for a Coordination Language <i>P. Bouvry and F. Arbab</i>	403
ALWAN: A Skeleton Programming Language <i>H. Burkhart, R. Frank and G. Hächler</i>	407
Weaving the Web Using Coordination <i>P. Ciancarini, R. Tolksdorf and F. Vitali</i>	411
Investigating Strategies for Cooperative Planning of Independent Agents Through Prototype Evaluation <i>E.-E. Doberkat, W. Hasselbring and C. Pahl</i>	416

A Case Study of Integration of a Software Process Management System with Software Engineering Environments for Process Monitoring and Management <i>A. Hazeyama and S. Komiya</i>	420
Nepi: A Network Programming Language Based on the Pi-Calculus <i>E. Horita and K. Mano</i>	424
Modelling Interoperability by CHAM: A Case Study <i>P. Inverardi and D. Compare</i>	428
Integrating Coordination Features in PVM <i>O. Krone, M. Aguilar, B. Hirsbrunner and V. Sunderam</i>	432
A Simulator Framework for Embedded Systems <i>P. A. Olivier</i>	436
Understanding Behavior of Business Process Models <i>P. A. Straub and C. Hurtado L.</i>	440
