## Preface

The intersection of distributed artificial intelligence and machine learning constitutes a relatively young but important area of research that has received steadily increasing attention in the past years. The reason for this attention is largely based on the insight that the complexity of the systems studied in distributed artificial intelligence often makes it extremely difficult or even impossible to correctly and completely specify their behavioral repertoires and their dynamics. It is therefore broadly agreed that these systems should be equipped with the ability to learn, that is, to improve their future performance on their own. This book documents current and ongoing developments in the area of learning in distributed artificial intelligence systems.

The book contains selected, revised, and extended versions of sixteen papers that were first presented at two related workshops held at the Twelfth European Conference on Artificial Intelligence (ECAI-96, Budapest, Hungary, August 11–16, 1996) and the Second International Conference on Multiagent Systems (ICMAS-96, Kyoto, Japan, December 9–13, 1996). These were the ECAI-96 workshop on “Learning in Distributed Artificial Intelligence Systems” (LDAIS) and the ICMAS-96 workshop on “Learning, Interaction, and Organization in Multiagent Environments” (LIOME). Additionally, the book contains the invited talk by Munindar Singh and Michael Huhns presented at the LDAIS workshop and a Reader’s Guide. Forty-one papers were submitted to these two workshops, from nine different countries: fifteen from Japan, nine from the USA, five from Germany, four from the UK, two each from Spain, Italy, and Switzerland, and one each from Romania and Sweden. Each paper submitted to the LDAIS or the LIOME workshop was reviewed by at least two experts. Twenty-five of the submitted papers were accepted for presentation at the workshops, and sixteen of them were selected for subsequent publication in this book. The purpose of both workshops was to bring together researchers and practitioners with an active interest in both distributed artificial intelligence and machine learning, and to serve as a forum for discussing existing work, exchanging expertise, and developing new ideas and perspectives. Further information on these workshops and their organization is provided on the following pages.

The papers included in this book reflect the broad spectrum of learning in distributed artificial intelligence systems and the progress made in this area. It is my hope that this book will serve as a valuable source of information and inspiration for the reader, and that it will lead to further development and progress in this fascinating area.

**Acknowledgements.** I would like to thank all the people who contributed to these workshops and thereby made this book possible at all. I am particularly grateful to the committee members of both workshops for their advice and review activities, to the additional reviewers, to Munindar Singh and Michael Huhns for giving an invited talk at the LDAIS workshop, to the speakers for presenting their work, to the workshop attendees for their interest, and to the authors

for their willingness to prepare revised and extended versions of their workshop contributions. The LIOME workshop would not have been possible without the commitment and engagement of Hiroshi Ishiguro. Last not least, I am indebt to Alfred Hofmann of Springer-Verlag for his assistance and support during the whole book project.

February 1997

Gerhard Weiß

# **Organization of the ECAI-96 Workshop on Learning in Distributed Artificial Intelligence Systems (LDAIS)**

## **Organizing Committee**

Gerhard Weiß (Chair)	Technische Universität München, Germany
Michael Huhns	University of South Carolina, USA
Toru Ishida	Kyoto University, Japan
Gerhard Kraetzschmar	Universität Ulm, Germany
Victor Lesser	University of Massachusetts, USA
Jeffrey Rosenschein	The Hebrew University, Israel
Gheorghe Tecuci	George Mason University, USA, & Romanian Academy, Romania
Walter Van de Velde	Vrije Universiteit Brussel, Belgium

## **Additional Reviewers**

Ciara Byrne	Trinity College, Dublin, Ireland
Diana Gordon	Navy Center for Applied Research in AI, USA
Thomas Haynes	University of Tulsa, USA
Tuomas Sandholm	University of Massachusetts at Amherst, USA
Ming Tan	GTE Laboratories Inc., USA
Moshe Tennenholtz	Technion - Israel Institute of Technology, Israel

## **Invited Speakers**

Munindar Singh (North Carolina State University, USA) and Michael Huhns (University of South Carolina, USA), “Challenges for Machine Learning in Co-operative Information Systems”

# **Organization of the ICMAS-96 Workshop on Learning, Interaction and Organization in Multiagent Environments (LIOME)**

## **Organizing Committee**

Yukinori Kakazu	Hokkaido University, Japan
Toru Ishida	Kyoto University, Japan
Gerhard Weiß	Technische Universität München, Germany

## **Program Committee**

Minoru Asada	Osaka University, Japan
Yves Demazeau	Laboratoire Leibniz, Institut IMAG, France
Ed Durfee	University of Michigan, USA
Thomas Haynes	University of Tulsa, USA
Michael Huhns	University of South Carolina, USA
Hiroshi Ishiguro	Kyoto University, Japan
Victor Lesser	University of Massachusetts, USA
Jeffrey Rosenschein	The Hebrew University, Israel
Sandip Sen	University of Tulsa, USA
Keiji Suzuki	Hokkaido University, Japan
Tatsuo Unemi	Soka University, Japan

# Contents

## Introduction

Reader's Guide .....	1
<i>Gerhard Weiß</i>	

Challenges for Machine Learning in Cooperative Information Systems ...	11
<i>Munindar P. Singh and Michael N. Huhns</i>	

## Part I: Learning, Cooperation and Competition

A Modular Approach to Multi-Agent Reinforcement Learning .....	25
<i>Norihiko Ono and Kenji Fukumoto</i>	

Learning Real Team Solutions .....	40
<i>Cristina Versino and Luca Maria Gambardella</i>	

Learning by Linear Anticipation in Multi-Agent Systems .....	62
<i>Paul Davidsson</i>	

Learning Coordinated Behavior in a Continuous Environment .....	73
<i>Norihiko Ono and Yoshihiro Fukuta</i>	

Multi-Agent Learning with the Success-Story Algorithm .....	82
<i>Jürgen Schmidhuber and Jieyu Zhao</i>	

On the Collaborative Object Search Team: A Formulation .....	94
<i>Yiming Ye and John K. Tsotsos</i>	

Evolution of Coordination as a Metaphor for Learning in Multi-Agent Systems .....	117
<i>Ana Lucia Ceterick Bazzan</i>	

## Part II: Learning About/From Other Agents and the World

Correlating Internal Parameters and External Performance: Learning Soccer Agents .....	137
<i>Rajani Nadella and Sandip Sen</i>	

Learning Agents' Reliability Through Bayesian Conditioning: A Simulation Experiment .....	151
<i>Aldo Franco Dragoni and Paolo Giorgini</i>	

A Study of Organizational Learning in Multi-Agent Systems .....	168
<i>Masahiro Terabe, Takashi Washio, Osamu Katai, and Tetsuo Sawaragi</i>	

Cooperative Case-Based Reasoning .....	180
<i>Enric Plaza, Josep Lluís Arcos, and Francisco Martín</i>	
Contract-Net-Based Learning in a User-Adaptive Interface Agency .....	202
<i>Britta Lenzmann and Ipke Wachsmuth</i>	
 <b>Part III: Learning, Communication and Understanding</b>	
The Communication of Inductive Inferences .....	223
<i>Winton Davies and Peter Edwards</i>	
Addressee Learning and Message Interception for Communication Load Reduction in Multiple Robot Environments .....	242
<i>Takuya Ohko, Kazuo Hiraki, and Yuichiro Anzai</i>	
Learning and Communication in Multi-Agent Systems .....	259
<i>Holger Friedrich, Michael Kaiser, Oliver Rogalla, and Rüdiger Dillmann</i>	
Investigating the Effects of Explicit Epistemology on a Distributed Learning System .....	276
<i>Nicholas Lacey, Keiichi Nakata, and Mark Lee</i>	
<b>Subject Index</b> .....	293
