Preface

Virtual Reality has the potential to provide descriptive and practical information for medical training and therapy while relieving the patient or the physician. Multi-modal interactions between the user and the virtual environment facilitate the generation of high-fidelity sensory impressions, by using not only visual and auditory, but also kinesthetic, tactile, and even olfactory feedback modalities. On the basis of the existing physiological constraints, this book derives the technical requirements and design principles of multimodal input devices, displays, and rendering techniques. Several examples are presented that are currently being developed or already applied for surgical training, intra-operative augmentation, and rehabilitation.

This book resulted from the lecture notes of the course Virtual Reality in Medicine, which has been taught and further developed at ETH Zurich, Switzerland, since 2003. It is well suited as introductory material for engineering and computer science students as well as researchers who want to learn more about basic technologies in the area of virtual reality applied to medicine. It also provides a broad overview to non-engineering students as well as clinical users, who desire to learn more about the current state of the art and future applications of this technology.

Many people contributed to the preparation of this book. Our thanks go to Gerald Bianchi, Basil Fierz, Philipp Fürnstahl, Marco Guidali, Johannes Hug, Seokhee Jeon, Benjamin Knörlein, Alexander König, Peter Leskovsky, Bryn Lloyd, Nikolas Neels, Bundit Panchaphongsaphak, Georg Rauter, Raimundo Sierra, Mario Sikic, Jonas Spillmann, Christoph Spuhler, Stefan Tuchschmid, and Heike Vallery. A special thanks goes to Roland Sigrist for his work in organising and performing the final editing of the book.

Contents

1	Introduction to Virtual Reality in Medicine	1
1.1	What Is Virtual Reality?	1
1.1.1	Definition of Virtual Reality	1
1.1.2	Presence and Immersion	2
1.2	VR in Medicine	2
1.2.1	Need for Training in Medicine	2
1.2.2	VR for Medical Education and Training	4
1.2.3	VR in Rehabilitation, Psychotherapy, and Surgery	5
1.2.4	Benefits and Chances	5
1.3	Principles of Virtual Reality	6
1.3.1	Main Components	6
1.3.2	Importance of Multimodality	7
1.3.3	Early Steps in Multimodal Displays	7
1.3.4	Multimodal Training Simulation	8
1.3.5	Problems	10
1.4	Contents of the Book	10
	References	11
2	Input Periphery	13
2.1	Human Actuators, Input Modalities	13
2.2	Position and Movement Recording	13
2.2.1	Physical Measurement Principles	13
2.2.2	Position and Movement Measuring Systems	15
2.2.3	Eye-Tracking Systems	19
2.3	Force and Torque Recording	20
2.3.1	Resistive Methods	21
2.3.2	Piezoelectric Methods	21
2.3.3	Optical Systems	22
2.3.4	Capacitive Methods	22
2.4	Sound and Speech Recording	23

2.5	Physiological Data Recording	23
2.5.1	Electromyography (EMG)	23
2.5.2	Electroencephalography (EEG)	24
2.5.3	Electrocardiography (ECG)	24
2.5.4	Blood Pressure Measurement	24
2.5.5	Pulse Oximetry	26
2.5.6	Respiratory Measurements	27
2.5.7	Skin Conductance	27
	References	28
3	Visual Aspects	31
3.1	What Is Computer Graphics?	31
3.2	Visual Sense and Perception	33
3.2.1	Structure of the Human Eye	33
3.2.2	Photoreceptors in the Retina	34
3.2.3	Electromagnetic Waves	35
3.2.4	Color Vision	37
3.2.5	RGB Color Space	38
3.2.6	Liquid Crystal Display	39
3.2.7	Further Colorsaces	39
3.2.8	Depth Perception	42
3.3	Visual Display Technology	45
3.3.1	Stereoscopic Rendering	45
3.3.2	Stereoscopic Display Hardware	47
3.3.3	Virtual Reality Displays	49
3.4	Rendering in Computer Graphics	53
3.4.1	Object Representations	53
3.4.2	Geometry Transformations	56
3.4.3	Light Sources and Reflection	59
3.4.4	Viewing Projections	64
3.4.5	Surface Shading	68
3.4.6	Advanced Rendering Techniques	73
3.5	Applications of Visual Displays in Medical VR	76
	References	77
4	Haptic Aspects	79
4.1	What Is Haptics?	79
4.2	Haptic Sense and Perception	80
4.2.1	Anatomy and Physiology	81
4.2.2	Psychophysics	84
4.2.3	Haptic Exploration	85
4.3	Haptic Display Technology	85
4.3.1	Kinematic Principles of Haptic Displays	86
4.3.2	Actuation Principles of Haptic Displays	89
4.3.3	Control Principles of Haptic Displays	95
4.3.4	Examples of Haptic Displays	99

4.4	Haptic Rendering	107
4.4.1	Penalty Method	107
4.4.2	Vector Field Method	110
4.4.3	God-Object Method	112
4.4.4	Force Shading Method	114
4.4.5	Two-Pass Force Shading Method	115
4.4.6	Haptic Rendering of Implicit Surfaces	117
4.4.7	Direct Haptic Rendering of NURBS Models	117
4.4.8	Point-Shell Voxelmap Method	121
4.4.9	Rendering of Deformable Objects	122
4.5	Applications of Haptic Displays in Medical VR	123
	References	125
5	Auditory Aspects	131
5.1	What Are Auditory Displays?	131
5.2	Auditory Sense and Perception	131
5.2.1	Anatomy and Physiology	132
5.2.2	Perception	132
5.3	Auditory Display Technology	136
5.3.1	Challenges for the Design of Auditory Displays	136
5.3.2	Examples of Auditory Displays	137
5.4	Auditory Rendering	142
5.4.1	Display of Pre-recorded Sound Samples	143
5.4.2	Real-Time Synthesizing of Sound	143
5.4.3	Sound Triggering	144
5.5	Application of Auditory Displays in Medical VR	145
	References	145
6	Olfactory and Gustatory Aspects	149
6.1	What Are Olfactory and Gustatory Displays?	149
6.2	Olfactory Sense and Perception	149
6.3	Olfactory Display Technology	150
6.3.1	Design Principles	150
6.3.2	Stationary Devices	151
6.3.3	Wearable Devices	153
6.4	Gustatory Sense and Perception	155
6.5	Gustatory Display Technology	156
6.5.1	Design Principles	156
6.5.2	Taste Simulation	157
6.5.3	Food Simulation	157
6.5.4	Drinking Simulation	157
6.6	Applications of Olfactory and Gustatory Displays in Medical VR .	158
