Human-Computer Interaction is a multidisciplinary field focused on human aspects of the development of computer technology. As computer-based technology becomes increasingly pervasive - not just in developed countries, but worldwide - the need to take a human-centered approach in the design and development of this technology becomes ever more important. For roughly 30 years now, researchers and practitioners in computational and behavioral sciences have worked to identify theory and practice that influences the direction of these technologies, and this diverse work makes up the field of human-computer interaction. Broadly speaking it includes the study of what technology might be able to do for people and how people might interact with the technology. In this series we present work which advances the science and technology of developing systems which are both effective and satisfying for people in a wide variety of contexts. The human-computer interaction series will focus on theoretical perspectives (such as formal approaches drawn from a variety of behavioral sciences), practical approaches (such as the techniques for effectively integrating user needs in system development), and social issues (such as the determinants of utility, usability and acceptability).

Images

I would like to thank the following for giving me permission to use these images.

Fig. 1.1: Virtual Calakmul, Dr. Rocio Ruiz Rodarte of Mexico, archaeologist Ramon Carrasco and architect Fernando Garcia Cuspineira. Dr. Rodarte was also very helpful to me when I visited Mexico during the author's doctoral research.

Fig. 1.2: Global Conflict: Palestine (as well as Figs. 5.8–5.10 which also features Playing History), Assistant Professor Simon Egenfeldt-Nielsen, Serious Games Interactive, Copenhagen. Simon was also instrumental in arranging support from a European Union project "Serious Games on a Global Market Place", which allowed me to visit both his company and DPU, Aarhus University in Copenhagen, in 2009.

Fig. 1.3: Virtual Parthenon interior, Chris Blundell, Brisbane.

Figs. 2.2–2.3: The SGI VRML model of Tenochtitlan ported to Bryce3D, placed on water, was originally created by SGI, thanks to them for releasing the project and the models via the Internet, and for promoting VRML.

Fig. 2.4: Qumulus, and Fig. 5.2 Dordrecht Monastery images are courtesy of Dylan Nagel, Paladin Studios, The Netherlands. I'd also like to thank Dylan for a model of the Temple of Inscriptions for my original Palenque environment.

Fig. 2.5: ActiveWorlds screenshot was in the public domain but thanks to ActiveWorlds for their continual involvement of the project and for their ongoing help with academic research.

Fig. 2.6: The Renaissance Community screenshot was taken by the author, but the virtual environment was a cooperative European Union research project with the technical assistance of Blaxxun.

Fig. 4.1: Virtual Queenscliff, courtesy of Professor William Cartwright, RMIT University, and Tim Germanchis.

Figs. 4.2–4.5: Palenque in Unreal Tournament screenshots were from a student project involving Andrew Dekker and Mark Hurst.

Figs. 4.6–4.7: Car racing inside a tent image was from a University of Queensland student project that the author supervised, the team was Bonnii Weeks and Jonathan Barrett.

Figs. 4.13–4.14: Journey to the West was from a University of Queensland student project that the author supervised, comprised of Bonni Weeks, Peter Claire and Wen Ling Pu.

Fig. 4.15: An Unreal bot (NPC) in the Unreal Palenque game level. Thanks to Mark Hurst and Andrew Dekker for the image.

Figs. 4.16–4.17: Elder Scrolls III: Morrowind and the Egyptian Temple of the Gods image was from a University of Queensland student project that the author supervised, the team was Alex Peters, Ryan Fairhurst, William Gordon and Benn Chisholm.

Fig. 4.18: Drawing Game (Chinese Writing Language) using Torque 2D image was from a University of Queensland student project that I supervised: AI Team Studios (Isaac Gibson and Amy Ng).

Fig. 5.1: The Blink3D image is courtesy of Dr. Glenn Gunhouse, Art History, Georgia State University.

Fig. 5.2: The Virtual Forbidden City image is courtesy of IBM.

Figs. 5.4–5.6: The Virtual Sambor images are courtesy of Professor Yehuda Kalay, University of California at Berkeley.

Fig. 5.7: Palace Kalhu, Assyria is courtesy of Dr. Melanie Stegman, Federation of American Scientists.

Figs. 5.11–5.12: Virtual Egyptian Temple images are courtesy of Dr. Jeffrey Jacobson, PublicVR, USA.

Figs. 5.13, 7.5–7.6: The Mawson's Hut Reconstruction, Exterior and interior images are courtesy of Associate Professor Paul Bourke, WASP, University of Western Australia, and Dr. Peter Morse.

Fig. 5.14: Macquarie Light House in Oblivion is courtesy of Dr. Eric Fassbender.

Figs. 5.15–5.16: PLACE-Hampi and PLACE-Hampi, Opera House, Lille images are courtesy of Sarah Kenderdine and Professor Jeffrey Shaw, iCinema.

Figs. 5.17–5.18: Spaces of Mjallnar from above and from in front were courtesy of Bernadette Flynn, the photographer was Heidrun Lohr.

Figs. 7.1–7.2: ARQuake and the HMD shot was courtesy of Professor Bruce Thomas, Director of the Wearable Computer Lab, School of Computer and Information Science The University of South Australia.

Figs. 7.3–7.4: The images of an early AR system and the asylum are courtesy of Professor Steven Feiner. The early AR system image is © 1997, Steven Feiner, Blair MacIntyre, Tobias Hoellerer, and Anthony Webster, Computer Graphics and User Interfaces Lab, Columbia University.

The asylum image is © 1999 Tobias Hoellerer, Steven Feiner, and John Pavlik, Computer Graphics and User Interfaces Lab, Columbia University.

Fig. 7.7: Layar Augmented Reality on a Phone image is courtesy of Layar Technologies.

Figs. 7.8–7.9: The Virtual World with Real World Information image is courtesy of Philippe Kerremans, (www.Platini.com).

Fig. 7.9: The 34 North by 118 West image is courtesy of James Hight.

Fig. 7.10: The Biofed Single-Player game play image was from Andrew Dekker's University of Queensland student project that the author supervised in 2006.

Fig. 7.11: The Biosensor image was from a University of Queensland student project (Renee King, Matt Rhodes, Liam Miller and Aaron Fletcher) that the author supervised in 2006.

Fig. 7.12: The Gameplay augmented by audience image was from a University of Queensland student project that the author supervised. The students were Bonnii Weeks and Jonathan Barrett.

I was given permission to publish several other images. To Microsoft India, to Mellanium, Wolfire, Katalabs and so on, my apologies, time and space was against me.

Funding for the Palenque Project

An Australian Research Council SPIRT grant in collaboration with the industry partner Lonely Planet Publications and the University of Melbourne supported this research.

Academic Advice

Thanks to Lonely Planet Publications (especially to Dr. Ron Gallagher). I would also like to thank the University of Melbourne, to Dr. Graham Hepworth for statistics consulting, and to my supervisors Professor Ian Bishop and Associate Professor Bharat Dave.

Advice Scripting and Materials from

Martin Judd, Michael J. Hall, Ben Jordan, Stuart Forbes, Jim Coe, Tweex, Adobe Atmosphere Development Team, Agnes Davey, Paul from UTS, Americo Damasco, and Phil C. Initial 3D Studio Max/Viz modelling of the Temple of Inscriptions was modelled by Dylan Nagel. The Palenque temple models used in the evaluation were modelled in Adobe Atmosphere by Erik Champion and so were the other 3D Studio Viz models. Thanks to Planeta Vivo Society for use of the small Pyramid of the Sun at Teotihuacán Viewpoint model (used in the warm-up environment). Music used in the evaluations is by Xavier Quijas Yxayotl (<http://www.yxayotl.com/>).

General

Thanks to the Centre for Classics and Archaeology at the University of Melbourne, and to all the people who participated in the user evaluations. Thanks for ongoing advice and encouragement from Paul Bourke, Bernard Meade, Peter Murphy, and Sarah Kenderdine.

Thanks also to KAIST for the offer of a conference grant to Korea, and to VSMM (and especially to Associate Professor Susan Tennant), for their ongoing interest in the project and for the recognition. In addition, thank you to Swinburne University of Technology for allowing me to test some of my ideas through supervision of postgraduate students, and for knowledge developed in co-ordinating the User Experience Design course. Thanks to Interaction Design, University of Queensland for initial funding and for give me so much leeway in organizing and supervising student projects. I am also greatly appreciated of the efforts of staff and students during my time there.

Archaeological Advice

Professor Peter Mathews for early archaeological and epigraphical advice, the FAMSI website for allowing me to use their amazing drawings as surface textures, and Justin Kerr for permission to use his photographs as surface textures. In addition, thanks to the musician Xavier Quijas Yxayotl for the breathtaking traditional music used in the evaluations. Thanks also to Associate Professor Phillip Hofstetter for permission to use his QuickTime panoramas (even though they were not used), Gilbert Griffin for advice on wall stucco texture, Doctor Ed Barnhart for sending me his terrain data, and Professor Dennis Tedlock for permission to quote from his translation of the Popol Vuh in the information used in the Palenque project.

“The Big Print Giveth and the Small Print Taketh Away” – *Step Right Up* by Tom Waits. I apologise in advance for any omissions, mistakes, dogmatic assertions, or other small print issues.
