# Preface

We are delighted to introduce the proceedings of the Third European Alliance for Innovation (EAI) International Conference on IoT as a Service (IoTaaS 2017). This conference brought together researchers, developers, and practitioners from around the world who are leveraging and developing technologies and applications for IoT as a service.

The technical program of IoTaaS 2017 consisted of 46 full papers that were presented at the conference. Aside from the high-quality technical paper presentations, the technical program also featured two keynote speeches and three special sessions. The two keynote speeches were given by Imrich Chlamtac from EAI/CREATE-NET/University of Trento and Tao Zhang from CISCO. The three special sessions organized were Wearable Technology and Applications (WTAA), Building Smart Machine Applications (BSMA), and Security and Privacy in the Internet of Things, Services, and People (SP-IoTSP). The WTAA special session aimed to address the challenges of maintaining the high efficiency of WTAA in terms of high recognition rate, energy consumption, computational costs, and so forth. The BSMA special session aimed to explore how to construct smart machine architecture for industry against the background of IoT and big data. The SP-IoTSP special session aimed to investigate recent research and future directions for IoTSP security and privacy.

Coordination with the steering chair, Imrich Chlamtac, and the steering committee members, Benny Mandler, Yi-Bing Lin, and Der-Jiunn Deng, was essential for the success of the conference. We sincerely appreciate their constant support and guidance. It was also a great pleasure to work with such an excellent Organizing Committee team and we thank them for their hard work in organizing and supporting the conference. We are particularly grateful to the Technical Program Committee, led by our TPC co-chairs, Prof. Der-Jiunn Deng and Prof. Ilsun You, who completed the peer-review process of technical papers and put together a high-quality technical program. We are also grateful to Conference Manager Michaela Miklusakova for her support, and all the authors who submitted their papers to the IoTaaS 2017 conference and special sessions.

We strongly believe that the IoTaaS conference provides a good forum for researchers, developers, and practitioners to discuss all aspects of science and technology that are relevant to IoT as a service. We also expect that future IoTaaS conferences will be as successful and stimulating, as indicated by the contributions presented in this volume.

# Conference Organization

## Steering Committee Chair

Imrich Chlamtac      Create-Net, Italy and EAI, Belgium

## Steering Committee Members

Athanasios V.      National Technical University of Athens, Greece  
Vasilakos  
Jun Suzuki      University of Massachusetts, Boston, USA  
Giancarlo Fortino      University of Calabria, Italy

## Organizing Committee

### General Chair

Zhelong Wang      Dalian University of Technology, China

### General Co-chair

Giancarlo Fortino      University of Calabria, Italy

### TPC Chairs

Qiong Wang      Technische Universität Dresden, Germany  
Dongyi Chen      University of Electronic Science and Technology of China,  
China  
Hassan Gasemzadeh      Washington State University, USA  
Thanos Vasilakos      Lulea University of Technology, Sweden  
Min Chen      Huazhong University of Science and Technology, China  
Mehmet Yuce      Monash University, Australia  
Xiangchen Li      China Institute of Sport Science, China

### Local Chair

Sen Qiu      Dalian University of Technology, China

### Special Track Chairs

Raffaele Gravina      University of Calabria, Italy  
Wenfeng Li      Wuhan University of Technology, China

### Publications Chair

Hongyu Zhao      Dalian University of Technology, China

### **Website Chair**

Jiaxin Wang Dalian University of Technology, China

### **Sponsorship and Exhibits Chair**

Long Liu Dalian University of Technology, China

### **Conference Manager**

Lenka Bilksa EAI, Belgium

### **Technical Program Committee**

Zhiqiang Zhang	University of Leeds, UK
Fan Wu	Monash University, Australia
Xiao Fang	Dresden University of Technology, Germany
Wendong Xiao	University of Science and Technology Beijing, China
Mehrab Ramzan	Dresden University of Technology, Germany
Pengjie Zhang	University of Chinese Academy of Sciences, China
Raffaele Gravina	University of Calabria, Italy
Qiong Wang	Dresden University of Technology, Germany
Ahmed Khorshid	University of California, Irvine, USA
Fabrizio Messina	University of Calabria, Italy
Hongyu Zhao	Dalian University of Technology, China
Claudio Savaglio	University of Calabria, Italy
Pasquale Pace	University of Calabria, Italy
Omid Dehzangi	University of Michigan, USA
Ibrahim Alquaydheb	University of California, Irvine, USA
Jianjun He	Dalian Minzu University, China
Xin Liu	Dalian University of Technology, China
Sen Qiu	Dalian University of Technology, China

# The Applications for IoT Sensor Bricks

## (Abstract of Poster and Demo)

**Abstract.** In this demonstration, the applications of IoT sensor bricks [1] including the color sensor system, temperature/UV sensor system, SpO2 sensor system, motion sensor system and alcohol sensor system are presented. Users can stack multiple sensor bricks together to build a unique IoT sensor system according to the requirements. The corresponding APPs of smart phone for 6 sensor systems are used to interact with visitors to experience the IoT sensor bricks. A video [2] is played to introduce the features of this commercial product and its sample applications in life. The firmware development/debug environment including the debug hardware and its GNU tool chains are also explained in this demonstration. Visitors can therefore understand that the proposed IoT sensor bricks is a modular wireless sensing system which features an open architecture and reusability. It has a sharable power supply unit, a computing unit, a communication unit, an output unit, and a sensing unit. The IoT sensor bricks can be disassembled and assembled at will; it is equipped with NFC, Bluetooth communication and wireless charging. Data gathered by IoT sensor bricks can be converted to useful applications and displayed in the smart phone. The demo materials for each sensor system include the alcohol swabs for the alcohol sensor system, pantone color paper for the color sensor system etc. are utilized to facilitate the demonstration.
