SpringerBriefs present concise summaries of cutting-edge research and practical applications across a wide spectrum of fields. Featuring compact volumes of 50 to 125 pages, the series covers a range of content from professional to academic.

Typical topics might include:

- A timely report of state-of-the art analytical techniques
- A bridge between new research results, as published in journal articles, and a contextual literature review
- A snapshot of a hot or emerging topic
- An in-depth case study or clinical example
- A presentation of core concepts that students must understand in order to make independent contributions

Briefs allow authors to present their ideas and readers to absorb them with minimal time investment. Briefs will be published as part of Springer's eBook collection, with millions of users worldwide. In addition, Briefs will be available for individual print and electronic purchase. Briefs are characterized by fast, global electronic dissemination, standard publishing contracts, easy-to-use manuscript preparation and formatting guidelines, and expedited production schedules. We aim for publication 8–12 weeks after acceptance. Both solicited and unsolicited manuscripts are considered for publication in this series.

To all those who smile.

### Preface

It is often said that the face is a window to the soul. Bearing a metaphor of this nature in mind, one might find it intriguing to understand, if any, how the physical, behavioural as well as emotional characteristics of a person could be decoded from the face itself. With the increasing deductive power of machine learning techniques, it is becoming plausible to address such questions through the development of appropriate computational frameworks. Though there are as many as over twenty-five categories of emotions one could express, regardless of the ethnicity, gender or social class, across humanity, there exist six common emotions namely happiness, sadness, surprise, fear, anger and disgust—all of which can be inferred from facial expressions. Of these facial expressions, the smile is the most prominent in social interactions.

The smile bears important ramifications with beliefs such as it makes one more attractive, less stressful in upsetting situations and employers tending to promote people who smile often. Even pockets of scientific research appear to be forthcoming to validate such beliefs and claims, e.g. the smile intensity observed in photographs positively correlates with longevity, the ability to win a fight and whether a couple would stay married. Thus, it appears that many important personality traits are encoded in the smile itself. Therefore, the deployment of computer based algorithms for studying the human smiles in greater detail is a plausible avenue for which we have dedicated the discussions in this book.

In this book, we discuss the recent developments in computational techniques for automated non-invasive facial emotion detection and analysis with particular focus on the smile. By way of application, we discuss how genuine and non-genuine smiles can be inferred, how gender is encoded in a smile and how it is possible to use the dynamics of a smile itself as a biometric feature.

Bradford, UK February 2019 Hassan Ugail Ahmad Ali Asad Aldahoud

#### Acknowledgements

This book is a result of years of research into the topic of computer based human facial analysis by the authors. To this end, we are grateful for the research support and funding we have received from a variety of sources. Notably, we would like to acknowledge the doctoral scholarship provided for Ahmad Al-dahoud by Al-Zaytoonah University of Jordan. We gratefully acknowledge funding we have received from the European Union's Horizon 2020 Programme H2020-MSCA-RISE-2017, under the project PDE-GIR with grant number 778035 and also funding from the University of Bradford's Higher Education and Innovation Fund. Undoubtedly, it takes a fair amount of dedication and continuous effort to put together a book—usually work on a book falls outside the regular lines of the day to day academic tasks. As a result, a support base outside the immediate academic environment is essential to complete a book of this nature. We feel blessed to have received such support from our dear family members, our friends, our colleagues and our collaborators. Without their support and continued encouragement, this book would not have seen the light of the day. Our heartfelt thanks, therefore, goes to all of them. Thank you!
