Preface

Bio-inspired computing methods take inspiration from nature to develop optimization and search algorithms or metaheuristics, typically in order to tackle the search for optimal solutions of complex problems in science and engineering, which usually imply a high dimensionality of the search space. The interplay between natural and artificial computation creates new paradigms not only in computer science but also in medicine and biology. The hybridization between social sciences and social behaviors with robotics, between neurobiology and computing, between ethics and neuroprosthetics, between cognitive sciences and neurocomputing, and between neurophysiology and marketing, will give rise to new concepts and tools that can be applied to ICT systems, as well as to natural science fields. Through IWINAC, we provide a forum in which research in different fields can converge to create new computational paradigms that are on the frontier between neural and biomedical sciences and information technologies.

As a multidisciplinary forum, IWINAC is open to any established institutions and research laboratories actively working in the field of natural or neural technologies. But beyond achieving cooperation between different research realms, we wish to actively encourage cooperation with the private sector, particularly SMEs, as a way of bridging the gap between frontier science and societal impact. In this edition, four main themes outline the conference topics: Affective Computing, Machine Learning Applied to NeuroScience, Deep Learning, and Biomedical Applications.

Emotions are essential in human–human communication, cognition, learning and rational decision-making processes. However, human–machine interfaces (HMIs) are still not able to understand human feelings and react accordingly. With the aim of endowing HMIs with the emotional intelligence they lack, affective computing science focuses on the development of artificial intelligence by means of the analysis of affects and emotions, such that systems and devices may be able to recognize, interpret, process and simulate human feelings.

Today, the evaluation of electrophysiological signals plays a key role in the advancement toward that purpose since they are an objective representation of the emotional state of an individual. Hence, the interest in physiological variables like electroencephalogram, electrocardiogram, or electrodermal activity, among many others, has notably grown in the field of affective states detection. Furthermore, emotions have also been widely identified by means of the assessment of speech characteristics and facial gestures of people under different sentimental conditions. It is also worth noting that the development of algorithms for the classification of affective states in social media has experienced a notable boost in the last years. In this sense, language of posts included in social networks, such as Facebook or Twitter, is evaluated with the aim of detecting the sentiments of the users of these media tools. Affective computing and sentiment analysis is intended to be a meeting point for researchers that are interested in any of those areas of expertise related to sentiment

analysis and who want to initiate their studies or are currently working on these topics. Hence, manuscripts introducing new proposals based on the analysis of physiological measures, facial recognition, speech recognition, or natural language processing in social media are examples on affective computing and sentiment analysis.

Currently, machine learning holds great promise in the development of new models and theories in the field of neuroscience, in conjunction with classic statistical hypothesis testing. Machine learning algorithms have the potential to reveal interactions, hidden patterns of abnormal activity, brain structure and connectivity, and physiological mechanisms of the brain and behavior. In addition, several approaches for testing the significance of the machine learning outcomes have been successfully proposed to avoid “the dangers of spurious findings or explanations void of mechanism” by means of proper replication, validation, and hypothesis-driven confirmation. Therefore, machine learning can effectively provide relevant information to take great strides toward understanding how the brain works. The main goal of this field is to build a bridge between two scientific communities, the machine learning community, including lead scientists in deep learning and related areas in pattern recognition and artificial intelligence, and the neuroscience community.

Deep learning has represented a breakthrough for the artificial intelligence community. The best performances attained so far in many fields, such as computer vision or natural language processing, have been overtaken by these novel paradigms up to a point that only ten years ago was just science fiction. In addition, this technology has been open sourced by the main AI companies, hence making it quite straightforward to design, train, and integrate deep-learning based systems. Moreover, the amount of data available every day is not only enormous, but growing at an exponential rate. Over the past few years there has been increasing interest in using machine learning methods to analyze and visualize massive data generated from very different sources and with many different features: social networks, surveillance systems, smart cities, medical diagnosis, business, cyberphysical systems or media digital data. This topic is designed to serve researchers and developers to publish original, innovative, and state-of-the art machine learning algorithms and architectures to analyze and visualize large amounts of data.

Finally, biomedical applications are essential in IWINAC meetings. For instance, brain-computer interfaces (BCI) implement a new paradigm in communication networks, namely, brain area networks. In this paradigm, our brain receives input data (external stimuli), performs multiple media-access controls by means of cognitive tasks (selective attention), processes the information (perception), takes a decision (cognition) and, eventually, transmits data back to the source (by means of a BCI), thus closing the communication loop. Image understanding is a research area involving both feature extraction and object identification within images from a scene, and a posterior treatment of this information in order to establish relationships between these objects with a specific goal. In biomedical and industrial scenarios, the main purpose of this discipline is, given a visual problem, to manage all aspects of prior knowledge, from study start-up and initiation through data collection, quality control, expert independent interpretation, to design and development of systems involving image processing capable of tackle with these tasks. These areas are clear examples of innovative applications in biology or medicine.

The wider view of the computational paradigm gives us more elbow room to accommodate the results of the interplay between nature and computation. The IWINAC forum thus becomes a methodological approximation (set of intentions, questions, experiments, models, algorithms, mechanisms, explanation procedures, and engineering and computational methods) to the natural and artificial perspectives of the mind embodiment problem, both in humans and in artifacts. This is the philosophy that continues in IWINAC meetings, the “interplay” movement between the natural and the artificial, facing this same problem every two years. This synergistic approach will permit us not only to build new computational systems based on the natural measurable phenomena, but also to understand many of the observable behaviors inherent to natural systems.

The difficulty of building bridges between natural and artificial computation is one of the main motivations for the organization of IWINAC 2019. The IWINAC 2019 proceedings contain the works selected by the Scientific Committee from nearly 200 submissions, after the refereeing process. The first volume, entitled *Understanding the Brain Function and Emotions*, includes all the contributions mainly related to the new tools for analyzing neural data, or detecting emotional states, or interfacing with physical systems. The second volume, entitled *From Bioinspired Systems and Biomedical Applications to Machine Learning*, contains the papers related to bioinspired programming strategies and all the contributions oriented to the computational solutions to engineering problems in different application domains, as biomedical systems, or big data solutions.

An event of the nature of IWINAC 2019 cannot be organized without the collaboration of a group of institutions and people whom we would like to thank now, starting with Universidad Nacional de Educación a Distancia (UNED) and Universidad Politécnica de Cartagena. The collaboration of the Universidad de Granada and Universidad de Almería was crucial, as was the efficient work of the local Organizing Committee, chaired by Juan Manuel Gorrión Sáez with the close collaboration of Manuel Cantón Garbín, Manuel Berenguel Soria, Javier Ramírez Pérez de Inestrosa, Andrés Ortiz García, Francisco Jesús Martínez Murcia, Diego Salas González, Ignacio Álvarez Illán, Fermín Segovia Román, and Diego Castillo Barnés. In addition to our universities, we received financial support from the Spanish CYTED, Red Nacional en Computación Natural y Artificial, Programa de Grupos de Excelencia de la Fundación Séneca and Apliquem Microones 21 s.l.

We want to express our gratitude to our invited speakers, Prof. Hojjat Adeli (Ohio State University, USA), Prof. Francisco Herrera (Universidad de Málaga, Spain), Prof. John Suckling (University of Cambridge, UK), and Prof. Hiroaki Wagatsuma (Kyushu Institute of Technology, Japan), for accepting our invitation and for their magnificent plenary talks. We would also like to thank the authors for their interest in our call and the effort in preparing the papers, condition sine qua non for these proceedings. We thank the Scientific and Organizing Committees, in particular the members of these committees who acted as effective and efficient referees and as promoters and managers of preorganized sessions on autonomous and relevant topics under the IWINAC global scope. Our sincere gratitude also goes to Springer and to Alfred Hofmann and his colleagues, Anna Kramer and Elke Werner, for the continuous receptivity, help efforts, and collaboration in all our joint editorial ventures on the

interplay between neuroscience and computation. Finally, we want to express our special thanks to Viajes Hispania, our technical secretariat, and to Chari García and Beatriz Baeza, for making this meeting possible, and for arranging all the details that comprise the organization of this kind of event.

Last year, in 2018, was 10 years without Professor Mira, without his close and friendly presence. We want to dedicate these two volumes of the IWINAC proceedings to Professor Mira's memory.

Contents – Part II

Models

Towards a General Method for Logical Rule Extraction from Time Series . . .	3
<i>Guido Sciavicco, Ionel Eduard Stan, and Alessandro Vaccari</i>	
A Principled Two-Step Method for Example-Dependent Cost Binary Classification	13
<i>Javier Mediavilla-Relaño, Aitor Gutiérrez-López, Marcelino Lázaro, and Anibal R. Figueiras-Vidal</i>	
Symbiotic Autonomous Systems with Consciousness Using Digital Twins . . .	23
<i>Felipe Fernández, Ángel Sánchez, José F. Vélez, and A. Belén Moreno</i>	
Deep Support Vector Classification and Regression	33
<i>David Díaz-Vico, Jesús Prada, Adil Omari, and José R. Dorronsoro</i>	
An Experimental Study on the Relationships Among Neural Codes and the Computational Properties of Neural Networks	44
<i>Sergio Miguel-Tomé</i>	
Uninformed Methods to Build Optimal Choice-Based Ensembles	58
<i>Ameed Almomani and Eduardo Sánchez</i>	

Robotics

Design and Implementation of a Robotics Learning Environment to Teach Physics in Secondary Schools	69
<i>Samantha Orlando, Félix de la Paz López, and Elena Gaudioso</i>	
Multi-robot User Interface for Cooperative Transportation Tasks	77
<i>Majd Kassawat, Enric Cervera, and Angel P. del Pobil</i>	
Precise Positioning and Heading for Autonomous Scouting Robots in a Harsh Environment	82
<i>David Obregón, Raúl Arnau, María Campo-Cossio, Juan G. Arroyo-Parras, Michael Pattinson, Smita Tiwari, Iker Lluvia, Oscar Rey, Jeroen Verschoore, Libor Lenza, and Joaquín Reyes</i>	

Applications

Gesture Control Wearables for Human-Machine Interaction in Industry 4.0	99
<i>Luis Roda-Sanchez, Teresa Olivares, Celia Garrido-Hidalgo, and Antonio Fernández-Caballero</i>	
Computing the Missing Lexicon in Students Using Bayesian Networks	109
<i>Pedro Salcedo L., M. Angélica Pinninghoff J., and Ricardo Contreras A.</i>	
Control of Transitory Take-Off Regime in the Transportation of a Pendulum by a Quadrotor	117
<i>Julián Estévez and Jose Manuel López-Guede</i>	
Improving Scheduling Performance of a Real-Time System by Incorporation of an Artificial Intelligence Planner	127
<i>Jesus Fernandez-Conde, Pedro Cuenca-Jimenez, and Rafael Toledo-Moreo</i>	
Convolutional Neural Networks for Olive Oil Classification	137
<i>Belén Vega-Márquez, Andrea Carminati, Natividad Jurado-Campos, Andrés Martín-Gómez, Lourdes Arce-Jiménez, Cristina Rubio-Escudero, and Isabel A. Nepomuceno-Chamorro</i>	
An Indoor Illuminance Prediction Model Based on Neural Networks for Visual Comfort and Energy Efficiency Optimization Purposes	146
<i>M. Martell, M. Castilla, F. Rodríguez, and M. Berenguel</i>	
Using Probabilistic Context Awareness in a Deliberative Planner System	157
<i>Jonatan Gines Clavero, Francisco J. Rodriguez, Francisco Martín Rico, Angel Manuel Guerrero, and Vicente Matellán</i>	
Combining Data-Driven and Domain Knowledge Components in an Intelligent Assistant to Build Personalized Menus	167
<i>Miquel Sànchez-Marrè, Karina Gibert, and Beatriz Sevilla-Villaneva</i>	
Robust Heading Estimation in Mobile Phones.	180
<i>Fernando E. Casado, Adrián Nieto, Roberto Iglesias, Carlos V. Regueiro, and Senén Barro</i>	

Bioinspired Systems

Crowding Differential Evolution for Protein Structure Prediction.	193
<i>Daniel Varela and José Santos</i>	
Bacterial Resistance Algorithm. An Application to CVRP	204
<i>M. Angélica Pinninghoff J., José Orellana M., and Ricardo Contreras A.</i>	

Conceptual Description of Nature-Inspired Cognitive Cities: Properties and Challenges	212

Deep Learning Prediction of Gait Based on Inertial Measurements	284
<i>Pedro Romero-Hernandez, Javier de Lope Asiain, and Manuel Graña</i>	

Recognizing Cognitive Activities Through Eye Tracking	291
<i>Sara Moraleda, Javier de Lope Asiain, and Manuel Graña</i>	

An Approach to Teach Nao Dialogue Skills	301
<i>Manuel Graña and Alexander Triguero</i>	

Boosting Object Detection in Cyberphysical Systems.	309
<i>José M. Buenaposada and Luis Baumela</i>	

Fusion of Inertial Motion Sensors and Electroencephalogram for Activity Detection	319
<i>Ibai Baglietto Araquistain, Xabier Garmendia, Manuel Graña, and Javier de Lope Asiain</i>	

BIOTHINGS: A Pipeline Creation Tool for PAR-CLIP Sequence Analys . . .	327
<i>Oier Echaniz and Manuel Graña</i>	

Machine Learning in Neuroscience

Automating Autoencoder Architecture Configuration: An Evolutionary Approach.	339
<i>Francisco Charte, Antonio J. Rivera, Francisco Martínez, and María J. del Jesus</i>	

Periodogram Connectivity of EEG Signals for the Detection of Dyslexia . . .	350
<i>F. J. Martínez-Murcia, A. Ortiz, R. Morales-Ortega, P. J. López, J. L. Luque, D. Castillo-Barnes, F. Segovia, I. A. Illan, J. Ortega, J. Ramirez, and J. M. Gorriz</i>	

Isosurface Modelling of DatSCAN Images for Parkinson Disease Diagnosis	360
<i>M. Martínez-Ibañez, A. Ortiz, J. Munilla, Diego Salas-Gonzalez, J. M. Górriz, and J. Ramírez</i>	
An Anomaly Detection Approach for Dyslexia Diagnosis Using EEG Signals	369
<i>A. Ortiz, P. J. López, J. L. Luque, F. J. Martínez-Murcia, D. A. Aquino-Britez, and J. Ortega</i>	
Comparison Between Affine and Non-affine Transformations Applied to $[^{123}\text{I}]$ -FP-CIT SPECT Images Used for Parkinson's Disease Diagnosis	379
<i>Diego Castillo-Barnes, Francisco J. Martinez-Murcia, Fermin Segovia, Ignacio A. Illán, Diego Salas-Gonzalez, Juan M. Górriz, and Javier Ramírez</i>	
Deep Learning on Brain Images in Autism: What Do Large Samples Reveal of Its Complexity?	389
<i>Matthew Leming and John Suckling</i>	
Multivariate Pattern Analysis of Electroencephalography Data in a Demand-Selection Task	403
<i>David López-García, Alberto Sobrado, J. M. González-Peñalver, Juan Manuel Górriz, and María Ruz</i>	
Support Vector Machine Failure in Imbalanced Datasets	412
<i>I. A. Illan, J. M. Gorriz, J. Ramirez, F. J. Martinez-Murcia, D. Castillo-Barnes, F. Segovia, and D. Salas-Gonzalez</i>	
Machine Learning Methods for Environmental-Enrichment-Related Variations in Behavioral Responses of Laboratory Rats	420
<i>Karmele López-de-Ipiña, Hodei Cepeda, Catalina Requejo, Elsa Fernandez, Pilar Maria Calvo, and Jose Vicente Lafuente</i>	
Author Index	429
