Studies in Computational Intelligence

Volume 851

Series Editor

Janusz Kacprzyk, Polish Academy of Sciences, Warsaw, Poland

The series "Studies in Computational Intelligence" (SCI) publishes new developments and advances in the various areas of computational intelligence—quickly and with a high quality. The intent is to cover the theory, applications, and design methods of computational intelligence, as embedded in the fields of engineering, computer science, physics and life sciences, as well as the methodologies behind them. The series contains monographs, lecture notes and edited volumes in computational intelligence spanning the areas of neural networks, connectionist systems, genetic algorithms, evolutionary computation, artificial intelligence, cellular automata, self-organizing systems, soft computing, fuzzy systems, and hybrid intelligent systems. Of particular value to both the contributors and the readership are the short publication timeframe and the world-wide distribution, which enable both wide and rapid dissemination of research output.

The books of this series are submitted to indexing to Web of Science, EI-Compendex, DBLP, SCOPUS, Google Scholar and Springerlink.

Preface

The term "software engineering" was coined in 1968 at the NATO Software Engineering Conference by Bauer (the chairman of the conference) in his famous statement "What we need, is software engineering". Since then the discipline has made a long way. It would not be possible without the hard work of both practitioners and researchers.

However, software engineering is now facing grand challenges including increasingly critical role software plays in our daily lives and the increasing size and complexity of software systems. With that, defect-free and rapidly developed software fulfilling user requirements may seem like distant goals. These challenges need to be addressed using new software engineering concepts, methods, processes, technologies, or tools. That is why, in this book, we emphasize the need for tight collaboration and integration of research and practice, to overcome the posed challenges in software engineering, which one would argue that never were greater than today. Authors of the chapters in this book worked in industry on the frontiers of innovation that grows from practice, as well as made important academic contributions in their labs. Thus, we believe they are well prepared to bridge research and practice as suggested by the title of this book. Chapters cover a wide range of topics from mining software repositories (including GitHub), software quality, safety, security and vulnerability to business modeling, requirements engineering (also in agile projects), user experience, extracting business rules from legacy code in COBOL, effort estimation, hybrid cloud model for Industry 4.0, and last but not least software engineering education.

Many people helped in the preparation, publication, and dissemination of this book. We would like to thank: authors of the contributed chapters, the referees for helping us in the selection process, and Polish Information Processing Society for continuous supporting our efforts. We would like to express also our gratitude to Prof. Janusz Kacprzyk, the editor of the "Studies in Computational Intelligence" series, Dr. Thomas Ditzinger from Springer for their interest and support, as well as Ramamoorthy Rajangam who coordinated the book production project. We sincerely hope that this book will be a valuable reference work in integrating research and practice in software engineering.

Acknowledgements We acknowledge support of Polish Ministry of Science and Higher Education for KKIO'2019 and this monograph with grant 510/P-DUN/2019.

Contents

Creating Evolving Project Data Sets in Software Engineering Tomasz Lewowski and Lech Madeyski	1
Semantic Categorization of Software Bug Repositories for Severity Assignment Automation Abeer Hamdy and AbdulRahman El-Laithy	15
Scalable and Accurate Detection of Function Clones in Software Using Multithreading Manoj Kumar Singh and Kuldeep Kumar	31
Inferring Hints for Defect Fixing Order from Requirements-to-test-case Mappings Stan Jarzabek, Konrad Liszewski and Cezary Boldak	43
Safety and Security Integrated SIL Evaluation Using the NFR Approach Nary Subramanian and Janusz Zalewski	53
A Software Analysis Based Vulnerability Detection System For Smart Contracts	69
Securing Connection and Data Transfer Between Devices and IoT Cloud Service	83
A Data-Driven Conceptual Modeling	97
On Cognitive Biases in Requirements Elicitation Andrzej Zalewski, Klara Borowa and Damian Kowalski	111

Nuts and Bolts of Extracting Variability Models from Natural Language Requirements Documents Eleonora Arganese, Alessandro Fantechi, Stefania Gnesi and Laura Semini	125
On Importance of Non-functional Requirements in Agile Software Projects—A Survey Sylwia Kopczyńska, Mirosław Ochodek and Jerzy Nawrocki	145
Evaluation of Selected UX Techniques by Product Managers—A Preliminary Survey Jakub Miler and Margarita Menjega-Schmidt	159
Towards a Lightweight Approach for the Evaluation of Requirements Engineering Impact on Other IT Project Areas	171
From COBOL to Business Rules—Extracting Business Rules from Legacy Code Harry M. Sneed and Chris Verhoef	187
ISO 25010 Support in Test Point Analysis for Testing Effort Estimation	209
Software for Integration of Manufacturing Resources in the Hybrid Cloud Model for Industry 4.0 Andrzej Paszkiewicz and Marek Bolanowski	223
Integration of Senior Software Project Courses in an Undergraduate Software Engineering Program Janusz Zalewski, Ingrid Buckley and Fernando Gonzalez	237
Author Index	257
