The series “Advances in Intelligent Systems and Computing” contains publications on theory, applications, and design methods of Intelligent Systems and Intelligent Computing. Virtually all disciplines such as engineering, natural sciences, computer and information science, ICT, economics, business, e-commerce, environment, healthcare, life science are covered. The list of topics spans all the areas of modern intelligent systems and computing such as: computational intelligence, soft computing including neural networks, fuzzy systems, evolutionary computing and the fusion of these paradigms, social intelligence, ambient intelligence, computational neuroscience, artificial life, virtual worlds and society, cognitive science and systems, Perception and Vision, DNA and immune based systems, self-organizing and adaptive systems, e-Learning and teaching, human-centered and human-centric computing, recommender systems, intelligent control, robotics and mechatronics including human-machine teaming, knowledge-based paradigms, learning paradigms, machine ethics, intelligent data analysis, knowledge management, intelligent agents, intelligent decision making and support, intelligent network security, trust management, interactive entertainment, Web intelligence and multimedia.

The publications within “Advances in Intelligent Systems and Computing” are primarily proceedings of important conferences, symposia and congresses. They cover significant recent developments in the field, both of a foundational and applicable character. An important characteristic feature of the series is the short publication time and world-wide distribution. This permits a rapid and broad dissemination of research results.

**** Indexing: The books of this series are submitted to ISI Proceedings, EI-Compendex, DBLP, SCOPUS, Google Scholar and Springerlink ****

Preface

The 2019 International Conference on Cyber Security Intelligence and Analytics (CSIA 2019) is an international conference dedicated to promoting novel theoretical and applied research advances in the interdisciplinary agenda of cyber security, particularly focusing on threat intelligence and analytics and countering cybercrime. Cyber security experts, including those in data analytics, incident response, and digital forensics, need to be able to rapidly detect, analyze, and defend against a diverse range of cyber threats in near real-time conditions. For example, when a significant amount of data is collected from or generated by different security monitoring solutions, intelligent and next-generation big data analytical techniques are necessary to mine, interpret, and extract knowledge of this (big) data. Cyber threat intelligence and analytics are among the fastest-growing interdisciplinary fields of research bringing together researchers from different fields such as digital forensics, political and security studies, criminology, cyber security, big data analytics, and machine learning to detect, contain, and mitigate advanced persistent threats and fight against organized cybercrimes.

Each paper was reviewed by at least three independent experts, and the acceptance rate was 45%. The conference would not have been possible without the contributions of the authors. We sincerely thank all the authors for their valuable contributions. We would like to express our appreciation to all members of the Program Committee for their valuable efforts in the review process that helped us to guarantee the highest quality of the selected papers for the conference.

We would like to express our thanks to Prof. Shunxiang Zhang, Anhui University of Science and Technology, and Prof. Xiangfeng Luo, Shanghai University, for being the keynote speakers at the conference. We would also thank the Steering Committee, General Chairs, Program Committee Chairs, Organizing Chairs, and Workshop Chairs. The local organizers' and the students' help is highly appreciated.

Our special thanks are due also to the editors for publishing the proceedings in *Advances in Intelligent Systems and Computing* of Springer.

Tianzheng Wang, Zhumao Lu, Shaohui Feng, Hua Yu, and Yongxin Liu

**Research on Multi-source Image Fusion Method Based on FCM
and Wavelet Transform 1371**
Lianhuan Li

**The Analysis and Research of Lifting Scheme
Based on Wavelet Transform 1377**
Li Ding and Weiqing Chen

**A Survey of Personalized Recommendation Algorithm Selection
Based on Meta-learning 1383**
Yi Ren, Cuirong Chi, and Zhang Jintao

**Study of Signal Remote Monitoring System Based on Template
Technology in Timing System 1389**
Wei Wu and Haidong Zou

**Research on E-learning Teaching Assistant System
Based on Improved Particle Swarm Optimization Algorithm. 1395**
Yue Liu, Jiamei Xue, and Meishan Li

Design of Tracing Car Based on Photoelectric Sensor 1401
Huang Jian

An Improved Particle Swarm Optimization Algorithm 1406
Chunguang Chang and Xi Wu

**A Statistical Process Control Approach to Global Optimization
of System Integration 1411**
Hequn Wu

Research on 3-D Laser Point Cloud Recognition Based on Depth Neural Network 1416
Fan Yu, Yanxi Wei, and Haige Yu

Information Management System and Supply Chain Management (SCM)..... 1421
Yefu Tang and Yanju Liu

Development of Hadoop Massive Data Migration System 1427
Ming Zheng and Mugui Zhuo

Talent-Training Mode Exploration in Software Major Between Universities and Enterprises Based on the Perspective of Big Data 1432
Xiaoming Yang

Analysis of Factors Affecting Power Grid Investment Based on Johansen Cointegration Analysis Theory 1437
Wang Zhang, Kaihui Nan, Qinggang Yang, Jianfeng Zhang, Hong Chen, and Xinyan Zhang

Direct Torque Control System of Electric Vehicle Based on Torque Hysteresis Adjustment 1443
Taihua Jia
