

Studies in Systems, Decision and Control

Volume 409

Series Editor

Janusz Kacprzyk, Systems Research Institute, Polish Academy of Sciences,
Warsaw, Poland

The series “Studies in Systems, Decision and Control” (SSDC) covers both new developments and advances, as well as the state of the art, in the various areas of broadly perceived systems, decision making and control—quickly, up to date and with a high quality. The intent is to cover the theory, applications, and perspectives on the state of the art and future developments relevant to systems, decision making, control, complex processes and related areas, as embedded in the fields of engineering, computer science, physics, economics, social and life sciences, as well as the paradigms and methodologies behind them. The series contains monographs, textbooks, lecture notes and edited volumes in systems, decision making and control spanning the areas of Cyber-Physical Systems, Autonomous Systems, Sensor Networks, Control Systems, Energy Systems, Automotive Systems, Biological Systems, Vehicular Networking and Connected Vehicles, Aerospace Systems, Automation, Manufacturing, Smart Grids, Nonlinear Systems, Power Systems, Robotics, Social Systems, Economic Systems and other. Of particular value to both the contributors and the readership are the short publication timeframe and the world-wide distribution and exposure which enable both a wide and rapid dissemination of research output.

Indexed by SCOPUS, DBLP, WTI Frankfurt eG, zbMATH, SCImago.

All books published in the series are submitted for consideration in Web of Science.

Acknowledgements

My research on probability-derived systemic risk measures that is the basis for this book was awarded in 2014 with the Best Dissertation Award of Deutsche Bundesbank and the Hochschulpreis in Finance of Deutsches Aktieninstitut. The systemic risk measures in the following pages are in daily operational use by the European Central Bank (ECB) and the European Systemic Risk Board (ESRB). I would like to thank these institutions for the acknowledgment and support for my research.

I would like to thank Isabel Schnabel for her support and mentorship. The research underlying this book was partially conducted while I was a guest researcher at the Financial Stability Surveillance Division of the European Central Bank. I would like to thank Puriya Abbassi, Toni Ahnert, Pooyan Amir Ahmadi, Ivan Alves, Bernd Bartels, Andreas Barth, Frank Betz, Michael Binder, Carsten Detken, Paola Donati, Andrea Gamba, Paolo Giudici, Denis Gorea, Charles Goodhart, Martin Götz, Reint Gropp, Paul Hiebert, Jan-Pieter Krahnen, Melanie Krause, Silviu Oprica, Laura Parisi, Loriana Pelizzon, Rafael Repullo, David Schumacher, Ctirad Slawik, Constantin Weiser, Mirko Wiederholt and Chen Zhou for their valuable discussions and recommendations. This book also benefited from the suggestions and comments of the ECB FSS staff and the participants of the 1st Workshop in Financial Economics, the Brown Bag seminar at Johannes Gutenberg University Mainz, the 2012 GSEFM Summer Institute, the 2012 Conferences of the German Economic Association and the German Finance Association, the 2013 Congress of the European Economic Association, the Eurofidai December 2013 Paris Finance Meeting, the 2014 IFABS Lisbon conference, the 2016 ESRB and Bank of Finland Conference in Helsinki and the 5th Emerging Scholars in Banking and Finance Conference at the Business School, London (formerly Cass Business School). All remaining errors are my own. I gratefully acknowledge research support from the Leibniz Institute for Financial Research SAFE, funded by the State of Hessen initiative for research LOEWE.
