The Springer Proceedings in Advanced Robotics (SPAR) publishes new developments and advances in the fields of robotics research, rapidly and informally but with a high quality.

The intent is to cover all the technical contents, applications, and multidisciplinary aspects of robotics, embedded in the fields of Mechanical Engineering, Computer Science, Electrical Engineering, Mechatronics, Control, and Life Sciences, as well as the methodologies behind them.

The publications within the “Springer Proceedings in Advanced Robotics” are primarily proceedings and post-proceedings of important conferences, symposia and congresses. They cover significant recent developments in the field, both of a foundational and applicable character. Also considered for publication are edited monographs, contributed volumes and lecture notes of exceptionally high quality and interest.

An important characteristic feature of the series is the short publication time and world-wide distribution. This permits a rapid and broad dissemination of research results.

Indexed by SCOPUS, SCIMAGO, WTI Frankfurt eG, zbMATH.

All books published in the series are submitted for consideration in Web of Science.

# Foreword

At the dawn of the century's third decade, robotics is reaching an elevated level of maturity and continues to benefit from the advances and innovations in its enabling technologies. These all are contributing to an unprecedented effort in bringing robots to human environment in hospitals and homes, factories, and schools, in the field for robots fighting fires, making goods and products, picking fruits and watering the farmland, and saving time and lives. Robots today hold the promise for making a considerable impact in a wide range of real-world applications from industrial manufacturing to health care, transportation, and exploration of the deep space and sea. Tomorrow, robots will become pervasive and touch upon many aspects of modern life.

The *Springer Tracts in Advanced Robotics (STAR)* was launched in 2002 with the goal of bringing to the research community the latest advances in the robotics field based on their significance and quality. During the latest fifteen years, the STAR series has featured the publication of both monographs and edited collections. Among the latter, the proceedings of thematic symposia devoted to excellence in robotics research, such as ISRR, ISER, FSR, and WAFR, have been regularly included in STAR.

The expansion of our field as well as the emergence of new research areas has motivated us to enlarge the pool of proceedings in the STAR series in the past few years. This has ultimately led to launching a sister series in parallel to STAR. The *Springer Proceedings in Advanced Robotics (SPAR)* is dedicated to the timely dissemination of the latest research results presented in selected symposia and workshops.

This volume of the SPAR series brings the proceedings of the seventeen edition of the International Symposium of Robotics Research (ISRR). The event took place in Hanoi, Vietnam, from October 6 to 10, 2019. The volume edited by Tamim Asfour, Eiichi Yoshida, Jaeheung Park, Philippe Bidaud, Henrik Christensen, and Oussama Khatib is a collection of 60 articles addressing a broad range of topics in robotics ranging from design to control, from vision to learning, and from planning to integrated systems. The content of these contributions provides a wide coverage of the current state of robotics research: the advances and challenges in its

theoretical foundation and technology basis, and the developments in its traditional and new emerging areas of applications. The diversity, novelty, and span of the work unfolding in these areas reveal the field's increased pace of development and expanded scope.

From its beautiful venue to its excellent program, the seventeen edition of ISRR culminates with this important reference on the current developments and new directions in the field of robotics—a true tribute to its contributors and organizers!

# Preface

This volume contains the papers that were presented at the 17th International Symposium of Robotics Research (ISRR). This biennial meeting is sponsored and organized by the International Foundation of Robotics Research (IFRR). The ISRR promotes the development and dissemination of groundbreaking research and technological innovation in robotics useful to society by providing a lively, intimate, forward-looking forum for discussion and debate about the current status and future trends of robotics with great emphasis on its potential role to benefit humankind.

This particular meeting took place in Hanoi during October 6–10, 2019. As one of the pioneering symposia in robotics, ISRR has established some of the most fundamental and lasting contributions in the field bringing together top experts in robotics from overall world since 1983. The ISRR 2019 program comprises a combination of distinguished talks, oral and interactive presentations as well as an attractive social program. Eighteen distinguished talks were given by leading roboticists presenting blue sky ideas and their views on the field including past experience, lessons learned, success and failure stories of robotics, views on the future, latest developments in robotics, and impact of robotics on society. In addition, the program includes 60 presentations, each presented in oral and interactive sessions, giving time for discussions between the participants. All presented papers were selected in a peer-review process of submitted papers in response to an open call for papers.

Scientific interaction is the keyword of ISRR, and the social program was designed to support the rich discussions among participants in the most suitable conditions, culminating in the collective trip to admire the beautiful Halong Bay on October 9 of this inspiring gathering. In addition, a workshop on robotics and AI was organized at the Hanoi University of Science & Technology (HUST) on October 10 with several talks given by ISSR2019 invited speakers, participation of HUST representative, and more than 300 students.

We are very grateful to all the contributing authors, distinguished speakers, the program committee, reviewers, sponsors as well as the organization supporting teams in Hanoi and Karlsruhe for their contributions and support to ISRR 2019.

Finally, the meeting would not have been possible without the support of the Sandra Tartarelli, Christine Grinewitsch, and Fabian Paus from KIT. We acknowledge and thank them all.

Bruno Siciliano	Univ. Napoli Federico II
Wataru Takano	Osaka University
Rudolph Triebel	German Aerospace Center – DLR
Eiichi Yoshida	National Inst. of AIST

# Contents

<b>Globally Optimal Joint Search of Topology and Trajectory for Planar Linkages</b> . . . . .	1
Zherong Pan, Min Liu, Xifeng Gao, and Dinesh Manocha	
<b>Asymmetric Dual-Arm Task Execution Using an Extended Relative Jacobian</b> . . . . .	18
Diogo Almeida and Yiannis Karayiannidis	
<b>Consensus-Based ADMM for Task Assignment in Multi-robot Teams</b> . . . . .	35
Ravi N. Haksar, Olaoluwa Shorinwa, Patrick Washington, and Mac Schwager	
<b>Rapidly-Exploring Quotient-Space Trees: Motion Planning Using Sequential Simplifications</b> . . . . .	52
Andreas Orthey and Marc Toussaint	
<b>Optimally Convergent Trajectories for Navigation</b> . . . . .	69
Nathan J. Kong and Aaron M. Johnson	
<b>Introducing PIVOT: Predictive Incremental Variable Ordering Tactic for Efficient Belief Space Planning</b> . . . . .	85
Khen Elimelech and Vadim Indelman	
<b>Fast and Fine Manipulation of RBCs in Artificial Capillary and Their Mysterious Behaviors</b> . . . . .	102
Makoto Kaneko and Chia-Hung Dylan Tsai	
<b>Certified Grasping</b> . . . . .	114
Bernardo Accettuno-Cabezas, Jose Ballester, and Alberto Rodriguez	
<b>KPAM: KeyPoint Affordances for Category-Level Robotic Manipulation</b> . . . . .	132
Lucas Manuelli, Wei Gao, Peter Florence, and Russ Tedrake	

<b>Unsupervised Real-Time Control Through Variational Empowerment</b> . . . . .	158
Maximilian Karl, Philip Becker-Ehmck, Maximilian Soelch, Djalel Benbouzid, Patrick van der Smagt, and Justin Bayer	
<b>Multilevel Monte-Carlo for Solving POMDPs Online</b> . . . . .	174
Marcus Hoerger, Hanna Kurniawati, and Alberto Elfes	
<b>Fast Reciprocal Collision Avoidance Under Measurement Uncertainty</b> . . . . .	191
Guillermo Angeris, Kunal Shah, and Mac Schwager	
<b>Learning Collaborative Action Plans from YouTube Videos</b> . . . . .	208
Hejia Zhang, Po-Jen Lai, Sayan Paul, Suraj Kothawade, and Stefanos Nikolaidis	
<b>SCRATCHS: Scalable and Robust Algorithms for Task-Based Coordination from High-Level Specifications</b> . . . . .	224
Austin M. Jones, Kevin Leahy, Cristian Vasile, Sadra Sadraddini, Zachary Serlin, Roberto Tron, and Calin Belta	
<b>Embedded Neural Networks for Robot Autonomy</b> . . . . .	242
Sarah Aguasvivas Manzano, Dana T. Hughes, Cooper R. Simpson, Radhen Patel, Christoffer Heckman, and Nikolaus Correll	
<b>Multi-objective Policy Generation for Multi-robot Systems Using Riemannian Motion Policies</b> . . . . .	258
Anqi Li, Mustafa Mukadam, Magnus Egerstedt, and Byron Boots	
<b>Deep Transfer Learning of Pick Points on Fabric for Robot Bed-Making</b> . . . . .	275
Daniel Seita, Nawid Jamali, Michael Laskey, Ajay Kumar Tanwani, Ron Berenstein, Prakash Baskaran, Soshi Iba, John Canny, and Ken Goldberg	
<b>Taming Combinatorial Challenges in Clutter Removal</b> . . . . .	291
Wei N. Tang and Jingjin Yu	
<b>Probabilistically Safe Corridors to Guide Sampling-Based Motion Planning</b> . . . . .	311
Jinwook Huh, Ömür Arslan, and Daniel D. Lee	
<b>A Photo-Realistic Synthetic Dataset for Analyzing the Effects of Moving Objects on Visual Localization Algorithms for Drones</b> . . . . .	328
Jeonggi Yang, Soojeon Lee, and Byoung-Sun Lee	
<b>Aerial Manipulation and Grasping by the Versatile Multilinked Aerial Robot DRAGON</b> . . . . .	343
Moju Zhao, Kei Okada, and Masayuki Inaba	

<b>Towards Assistive Robotic Pick and Place in Open World Environments . . . . .</b>	<b>360</b>
Dian Wang, Colin Kohler, Andreas ten Pas, Alexander Wilkinson, Maozhi Liu, Holly Yanco, and Robert Platt	
<b>Inferring Occluded Geometry Improves Performance When Retrieving an Object from Dense Clutter . . . . .</b>	<b>376</b>
Andrew Price, Linyi Jin, and Dmitry Berenson	
<b>Generalized Proximal Methods for Pose Graph Optimization . . . . .</b>	<b>393</b>
Taosha Fan and Todd Murphey	
<b>Joint Space Stiffness and Damping for Cartesian and Null Space Impedance Control of Redundant Robotic Manipulators . . . . .</b>	<b>410</b>
Carlos Saldarriaga, Nilanjan Chakraborty, and Imin Kao	
<b>Robot-Assisted Feeding: Generalizing Skewering Strategies Across Food Items on a Plate . . . . .</b>	<b>427</b>
Ryan Feng, Youngsun Kim, Gilwoo Lee, Ethan K. Gordon, Matt Schmittle, Shivaum Kumar, Tapomayukh Bhattacharjee, and Siddhartha S. Srinivasa	
<b>The Blindfolded Robot: A Bayesian Approach to Planning with Contact Feedback . . . . .</b>	<b>443</b>
Brad Saund, Sanjiban Choudhury, Siddhartha Srinivasa, and Dmitry Berenson	
<b>Learning User Preferences for Trajectories from Brain Signals . . . . .</b>	<b>460</b>
Henrich Kolkhorst, Wolfram Burgard, and Michael Tangermann	
<b>Attitude Tracking from a Camera and an Accelerometer on Gyro-Less Devices . . . . .</b>	<b>477</b>
Tien Do, Leo Neira, Yang Yang, and Stergios I. Roumeliotis	
<b>A Unified Pipeline for 3D Detection and Velocity Estimation of Vehicles . . . . .</b>	<b>493</b>
Xinxin Du, Marcelo H. Ang Jr., Sertac Karaman, and Daniela Rus	
<b>Automatic Encoding and Repair of Reactive High-Level Tasks with Learned Abstract Representations . . . . .</b>	<b>509</b>
Adam Pacheck, George Konidaris, and Hadas Kress-Gazit	
<b>Multi-class Target Tracking Using the Semantic PHD Filter . . . . .</b>	<b>526</b>
Jun Chen and Philip Dames	
<b>Task-Motion Planning for Navigation in Belief Space . . . . .</b>	<b>542</b>
Antony Thomas, Fulvio Mastrogiiovanni, and Marco Baglietto	
<b>Exploration Without Global Consistency Using Local Volume Consolidation . . . . .</b>	<b>559</b>
Titus Cieslewski, Andreas Ziegler, and Davide Scaramuzza	

<b>Vision-Based Autonomous UAV Navigation and Landing for Urban Search and Rescue . . . . .</b>	<b>575</b>
