Preface

We are excited to present the proceedings of the 23rd annual Passive and Active Measurement (PAM) conference. After more than two decades, PAM continues to provide an essential venue for emerging and early-stage research in network measurements – work that seeks to better understand complex, real-world networked systems and offer critical empirical foundations and support to network research. In light of a still ongoing global COVID-19 pandemic, this 23rd edition of PAM was held as a virtual (online) conference during March 28–30, 2022. This year’s edition benefited from experiences gathered by measuring the participants’ feedback from PAM 2020 and PAM 2021, both held online.

This year’s proceedings demonstrate the importance and extent to which measurements permeate systems – from protocols to performance to security. In total, we received 62 double-blind submissions from authors representing 47 unique institutions, of which the Technical Program Committee (TPC) selected 30 for publication – on a par with last year’s published papers. A novelty this year was the possibility of submitting long papers. We received 30 long submissions, out of which half were accepted. We thus reached the same acceptance rate for long and short submissions. We paid particular attention to the TPC composition, intending to have it as broadly representative as possible, including both junior and senior researchers. We are indebted to the hard-working TPC members, who ensured that each paper received four reviews and carried out a lively (and in several cases spirited) online discussion to arrive at the final program. TPC members were asked to provide constructive feedback, bearing in mind PAM’s focus and goals that recognize promising early work and reproducibility effort. For PAM 2022 we once again implemented a Review Task Force (RTF), following the model used by USENIX Security and ACM IMC. The RTF included senior, experienced researchers from the community, who are also great mentors. The engagement of such a group ensured that all the TPC’s feedback met high standards of technical correctness, specific critiques, and a positive, constructive tone. To ensure the quality of the program and equanimity of the presented results, 18 papers were assigned a shepherd from the TPC members who reviewed the paper. We are delighted with the final set of 30 papers and hope the readers find them as valuable and provocative as we do.

We would be remiss not to thank the Steering Committee for helping organize the conference. We thank SIDN for being the hosting institution. We thank Marco Davids as Web chair, Moritz Müller as Registration chair, and Caspar Schutijser as Video chair, along with all the volunteers who helped run the online sessions. We also thank the legal team at SIDN (Maarten Simon, Karin Vink, and April Löwe) who helped us navigate the Dutch and European privacy laws. Last but not least, we thank all the

researchers who have made PAM such an exciting and essential conference for all these years.
