Preface

Both formal methods and conventional software engineering techniques face various challenges; they must be properly integrated to establish more effective technologies for future software engineering. The development of the Structured Object-Oriented Formal Language (SOFL) over the last two decades has shown some possibilities of achieving effective integrations to build practical formal techniques and tool support for requirements analysis, specification, design, inspection, review, and testing of software systems. SOFL integrates: Data Flow Diagram, Petri Nets, and VDM-SL to offer a graphical and formal notation for writing specification-based inspection and testing methods for detecting errors in both specifications and programs; and a set of tools to support modeling and verification. Meanwhile, the Modeling, Simulation and Verification Language (MSVL) is a parallel programming language developed over the last decade. Its supporting tool MSV has been developed to enable us to model, simulate, and verify a system formally. The two languages complement each other.

Following the success of the second SOFL workshop held in Kyoto in 2012, the 3rd International Workshop on SOFL+MSVL (SOFL+MSVL 2013) is jointly organized by the Shaoying Liu research group at Hosei University, Japan, and the Zhenhua Duan research group at Xidian University, China, with the aim of bringing industrial, academic, and government experts and practitioners of SOFL or MSVL to communicate and to exchange ideas. The workshop attracted 22 submissions on formal specification, specification-based testing, specification pattern, modeling checking, specification animation, simulation, application of SOFL, and supporting tools for SOFL or MSVL. Each submission is rigorously reviewed by two Program Committee members on the basis of technical quality, relevance, significance, and clarity, and 13 papers were accepted for publication in the workshop proceedings. The acceptance rate is approximately 59 %.

We would like to thank the ICFEM 2013 organizers for supporting the organization of the workshop, all of the Program Committee members for their great efforts and cooperation in reviewing and selecting papers, and our postgraduate students for their help. We would also like to thank all of the participants for attending presentation sessions and actively joining discussions at the workshop. Finally, our gratitude goes to Alfred Hofmann and his team for their continuous support in the publication of the workshop proceedings.

January 2014

Contents

Testing and Verification

Combining Specification-Based Testing, Correctness Proof, and Inspection for Program Verification in Practice	3
Theory of Test Modeling Based on Regular Expressions	17
Simulation and Model Checking	
Integrating Separation Logic with PPTL Xu Lu, Zhenhua Duan, Cong Tian, and Hongjin Liu	35
Improved Net Reductions for LTL\X Model Checking Ya Shi, Zhenhua Duan, Cong Tian, and Hua Yang	48
Formalizing and Implementing Types in MSVL	62
Present-Future Form of Linear Time μ-Calculus Yao Liu, Zhenhua Duan, Cong Tian, and Bo Liu	76
SOFL Tools	
Prototype Tool for Supporting a Formal Engineering Approach to Service-Based Software Modeling	89
A Supporting Tool for Syntactic Analysis of SOFL Formal Specifications and Automatic Generation of Functional Scenarios Shenghua Zhu and Shaoying Liu	104
SOFL Specification Animation with Tool Support	118
Formal Specification and Application	
An Approach to Declaring Data Types for Formal Specifications Xi Wang and Shaoying Liu	135
Detection Method of the Second-Order SQL Injection in Web Applications Lu Yan, Xiaohong Li, Ruitao Feng, Zhiyong Feng, and Jing Hu	154

X Contents

Applying SOFL to Constructing a Smart Traffic Light Specification Wahyu Eko Sulistiono and Shaoying Liu	166
Checking Internal Consistency of SOFL Specification: A Hybrid Approach Yuting Chen	175
Author Index	193
