About this Series

The series “Studies in Computational Intelligence” (SCI) publishes new developments and advances in the various areas of computational intelligence—quickly and with a high quality. The intent is to cover the theory, applications, and design methods of computational intelligence, as embedded in the fields of engineering, computer science, physics and life sciences, as well as the methodologies behind them. The series contains monographs, lecture notes and edited volumes in computational intelligence spanning the areas of neural networks, connectionist systems, genetic algorithms, evolutionary computation, artificial intelligence, cellular automata, self-organizing systems, soft computing, fuzzy systems, and hybrid intelligent systems. Of particular value to both the contributors and the readership are the short publication timeframe and the world-wide distribution, which enable both wide and rapid dissemination of research output.

Preface

Information and Communication Technologies are widely used in business, industry, and public sector. They support core business, enable control of equipment, provide information or knowledge for decision makers, and they allow the creation/design of new software and hardware solutions. Ubiquitous Internet has forced the development of new services and it is still an inspiration to propose new tools, approaches, and paradigms.

The development of the information society (the knowledge era) is directly related to the growing importance of information. Large datasets processing give a possibility of obtaining relevant information and knowledge can be acquired from data. Thus, data processing, analyses, visualization are very important, practically essential for organizations, therefore decision makers.

Researchers' and business sector's interest in solutions for advanced processing and acquisition of information to be able to process knowledge. To this aim intelligent systems and software/hardware solutions are to be employed. High potential for Business ICT have, in particular, Business Intelligence, reasoning systems, knowledge management, advanced signal/data processing, text mining techniques (including processing data available on the web sites/services and content processing), and big data—including new analyzing and visualization algorithms.

This contributed volume is a result of many valuable discussions held at ABICT'13 (4th International Workshop on Advances in Business ICT) in Krakow, September 8–11, 2013.

The workshop focused on Advances in Business ICT approached from a multidisciplinary perspective. It provided an international forum for scientists/experts from academia and industry to discuss and exchange current results, applications, new ideas of ongoing research, and experience on all aspects of Business Intelligence and big data. ABICT has also been an opportunity to demonstrate different ideas and tools for developing and supporting organizational creativity, as well as advances in decision support systems.

This book is an interesting resource for researchers, analysts, and IT professionals including software designers. The book comprises 11 chapters. Authors

present research results on business analytics in organization, business processes modeling, problems with processing big data, nonlinear time structures, and nonlinear time ontology application, simulation profiling, signal processing (including change detection problems), text processing and risk analysis.

Contents

A Multi-level Hierarchical Approach for Configuring Business Processes	1
Mateusz Baran, Krzysztof Kluza, Grzegorz J. Nalepa and Antoni Ligęza	
Profiling Simulation Performance: The Example of the German Toll System	19
Tommy Baumann, Bernd Pfitzinger and Thomas Jestädt	
Analysis of Content of Posts and Comments in Evolving Social Groups	35
Bogdan Gliwa, Anna Zygmunt and Piotr Bober	
Generation of Hierarchical Business Process Models from Attribute Relationship Diagrams	57
Krzysztof Kluza and Grzegorz J. Nalepa	
Nonlinear Time Structures and Nonlinear Time Ontology for Description of Economic Phenomena	77
Maria Mach-Król	
Business Intelligence and Analytics in Organizations	89
Celina M. Olszak	
Low-Frequency Signal Reconstruction and Abrupt Change Detection in Non-stationary Time Series by Enhanced Moving Trend Based Filters	111
Tomasz Pelech-Pilichowski and Jan T. Duda	

The Assessment of the EPQ Parameter for Detecting H-Index Manipulation and the Analysis of Scientific Publications	127
Rafał Rumin and Piotr Potiopa	
Fuzzy Multi-attribute Evaluation of Investments	141
Bogdan Rębiasz, Bartłomiej Gawel and Iwona Skalna	
Theory of Digital Data Transformation in the ICT	157
Lubomyr B. Petryshyn	
The Opportunities and Challenges Connected with Implementation of the Big Data Concept.	171
Janusz Wielki
