Preface

This volume contains the proceedings of the 19th International Conference on Knowledge Engineering and Knowledge Management (EKAW 2014), held in Linköping, Sweden, during November 24–28, 2014. This was the first EKAW conference in a Nordic country. It was concerned with all aspects of eliciting, acquiring, modeling, and managing knowledge, the construction of knowledge-intensive systems and services for the Semantic Web, knowledge management, e-business, natural language processing, intelligent information integration, personal digital assistance systems, and a variety of other related topics.

The special focus of EKAW 2014 was *Diversity*. Today, multi-thematic, multi-perspective, multi-cultural, multi-media, and multi-dimensional data are available at an ever-increasing spatial, temporal, and thematic resolution. This allows us to gain a more holistic understanding of complex physical and social processes that cannot be explained from within one domain alone. While scale and complexity of information has always attracted attention, its heterogeneity in nature and usage are only now being investigated more systematically. To publish, retrieve, clean, reuse, and integrate these data requires novel knowledge engineering and management methods. Thus, EKAW 2014 put a special emphasis on this diversity of knowledge and its usage.

For the main conference we invited submissions for research papers that present novel methods, techniques, or analysis with appropriate empirical or other types of evaluation, as well as in-use papers describing applications of knowledge management and engineering in real environments. We also invited submissions of position papers describing novel and innovative ideas that are still in an early stage. In addition to the regular conference submission, we established a combined conference/journal submission track. Papers accepted for the combined track were published as regular research papers in this EKAW 2014 Springer conference proceedings and authors were also invited to submit an extended version of their manuscript for a fast-track in the *Semantic Web* journal (SWJ) published by IOS Press. The journal follows an open review process. All submitted papers were publicly available during the review phase and the reviews and final decisions were posted online, thereby making the review process more transparent.

Overall, we received 168 abstract submissions, 138 which were submitted as papers. We are very glad to report that 45 author teams decided to submit to the combined track, thus making their papers and reviews publicly available. These papers were either accepted for the conference and journal, for the conference only, or rejected for both. In total, 45 submissions were accepted by the Program Committee: seven for the combined EKAW/SWJ track, 17 full papers for the conference only, 17 as short(er) papers, and four position papers.

To complement the program, we invited three distinguished keynote speakers:

- Pascal Hitzler (Wright State University, Dayton, Ohio, USA) presented a talk on “Ontology Design Patterns for Large-Scale Data Interchange and Discovery.”
- Arianna Betti (University of Amsterdam, The Netherlands) gave a talk on “Concepts in Motion.”
- Oscar Corcho (Universidad Politecnica de Madrid, Spain) discussed the question “Ontology Engineering for and by the Masses: Are We Already There?”

The program chairs of EKAW 2014 were Krzysztof Janowicz from the University of California, Santa Barbara, USA, and Stefan Schlobach from the Vrije Universiteit Amsterdam, The Netherlands.

The EKAW 2014 program included a Doctoral Consortium that provided PhD students an opportunity to present their research ideas and results in a stimulating environment, to get feedback from mentors who are experienced research scientists in the community, to explore issues related to academic and research careers, and to build relationships with other PhD students from around the world. The Doctoral Consortium was intended for students at each stage of their PhD. All accepted presenters had an opportunity to present their work to an international audience, to be paired with a mentor, and to discuss their work with experienced scientists from the research community. The Doctoral Consortium was organized by Ying Ding from the Indiana University Bloomington, USA, and Chiara Ghidini from The Fondazione Bruno Kessler in Italy.

In addition to the main research track, EKAW 2014 hosted four satellite workshops and two tutorials:

Workshops

1. *VISUAL2014*. International Workshop on Visualizations and User Interfaces for Knowledge Engineering and Linked Data Analytics
2. *EKM1*. The First International Workshop on Educational Knowledge Management
3. *ARCOE-Logic 2014*. The 6th International Workshop on Acquisition, Representation and Reasoning about Context with Logic
4. *WaSABi2014*. The Third International Workshop on Semantic Web Enterprise Adoption and Best Practice

Tutorials

1. *K4D*: Managing and Sharing Knowledge in Rural Parts of the World. By Stefan Schlobach, Victor de Boer, Christophe Guret, Stéphane Boyera, and Philippe Cudré-Mauroux.
2. *Language Resources and Linked Data*. By Jorge Gracia, Asuncion Gomez-Perez, Sebastian Hellmann, John McCrae, Roberto Navigli, and Daniel Vila-Suero.

The workshop and tutorial programs were chaired by Eva Blomqvist from Linköping University, Sweden, as well as Valentina Presutti from STLab ISTC-CNR, Italy.

Finally, EKAW 2014 also featured a demo and poster session. We encouraged contributions that were likely to stimulate critical or controversial discussions about any of the areas of the EKAW conference series. We also invited developers to showcase their systems and the benefit they can bring to a particular application. The demo and poster programs of EKAW 2014 were chaired by Guilin Qi from the Southeast University, China, and Uli Sattler from the University of Manchester, UK.

The conference organization also included Axel-Cyrille Ngonga Ngomo from the Universität Leipzig, Germany, as the sponsorship chair, Henrik Eriksson and Patrick Lambrix both from Linköping University, Sweden, took care of local arrangements, and Zlatan Dragisic and Valentina Ivanova from Linköping University, Sweden, acted as Web presence chairs. Eero Hyvönen from Aalto University, Finland, and Patrick Lambrix from Linköping University, Sweden, were the general chairs of EKAW 2014.

Thanks to everybody, including attendees at the conference, for making EKAW 2014 a successful event.

Organization

The 19th EKAU 2014 conference in Linköping was organized by the following team.

Executive Committee

General Chairs

Patrick Lambrix	Linköping University, Sweden
Eero Hyvönen	Aalto University, Finland

Program Chairs

Krzysztof Janowicz	University of California, Santa Barbara, USA
Stefan Schlobach	VU University, The Netherlands

Workshop and Tutorial Chairs

Eva Blomqvist	Linköping University, Sweden
Valentina Presutti	STLab ISTC-CNR, Italy

Demo and Poster Chairs

Guilin Qi	Southeast University, China
Uli Sattler	University of Manchester, UK

Sponsorship Chair

Axel-Cyrille Ngomo	Leipzig University, Germany
--------------------	-----------------------------

Doctoral Consortium Chairs

Ying Ding	Indiana University Bloomington, USA
Chiara Ghidini	FBK, Italy

Local Organization Chairs

Patrick Lambrix	Linköping University, Sweden
Henrik Eriksson	Linköping University, Sweden

Web Presence Chairs

Zlatan Dragisic	Linköping University, Sweden
Valentina Ivanova	Linköping University, Sweden

Program Committee

Benjamin Adams	The University of Auckland, Australia
Lora Aroyo	VU University Amsterdam, The Netherlands
Sören Auer	University of Bonn and Fraunhofer IAIS, Germany
Nathalie Aussenac-Gilles	IRIT Toulouse, France
Andrea Ballatore	UCD Dublin, Ireland
Wouter Beek	VU University Amsterdam, The Netherlands
Olivier Bodenreider	US National Library of Medicine, USA
Joost Breuker	University of Amsterdam, The Netherlands
Christopher Brewster	Aston University, Birmingham, UK
Liliana Cabral	CSIRO, Australia
Vinay Chaudhri	SRI International, USA
Michelle Cheatham	Wright State University in Dayton, Ohio, USA
Paolo Ciancarini	University of Bologna, Italy
Philipp Cimiano	University of Bielefeld, Germany
Paul Compton	The University of New South Wales, Australia
Olivier Corby	Inria, France
Ronald Cornet	AMC - Universiteit van Amsterdam, The Netherlands
Claudia D'Amato	University of Bari, Italy
Mathieu D'Aquin	The Open University, UK
Aba-Sah Dadzie	University of Birmingham, UK
Victor de Boer	VU Amsterdam, The Netherlands
Stefan Decker	DERI Galway, Ireland
Daniele Dell'Aglio	DEI, Politecnico di Milano, Italy
Emanuele Della Valle	DEI, Politecnico di Milano, Italy
Klaas Dellschaft	University Koblenz-Landau, Germany
Zlatan Dragisic	Linköping University, Sweden
Henrik Eriksson	Linköping University, Sweden
Dieter Fensel	University of Innsbruck, Austria
Jesualdo Tomás	
Fernández-Breis	Universidad de Murcia, Spain
Antske Fokkens	VU Amsterdam, The Netherlands
Aldo Gangemi	Université Paris 13 and CNR-ISTC, France
Serge Garlatti	Telecom Bretagne, France
Dragan Gasevic	Athabasca University, Canada
Chiara Ghidini	FBK-irst, Italy
Luca Gilardoni	Quinary
Paul Groth	VU University Amsterdam, The Netherlands
Michael Gruninger	University of Toronto, Canada
Jon Atle Gulla	Norwegian University of Science and Technology, Norway

Keynote Papers

Concepts in Motion

Arianna Betti

Universiteit van Amsterdam

ariannabetti@gmail.com

Abstract. The history of ideas traces the development of ideas such as evolution, liberty, or science in human thought as represented in texts. Recent contributions [2] suggest that the increasing quantities of digitally available historical data can be of invaluable help to historians of ideas.

However, these and similar contributions usually apply generic computer methods, simple n-gram analyses and shallow NLP tools to historical textual material. This practice contrasts strikingly with the reality of research in the history of ideas and related fields such as history of science. Researchers in this area typically apply painstakingly fine-grained analyses to diverse textual material of extremely high conceptual density. Can these opposites be reconciled? In other words: Is a digital history of ideas possible?

Yes, I argue, but only by requiring historians of ideas to provide explicitly structured semantic framing of domain knowledge before investigating texts computationally (models in the sense of [1]), and to constantly re-input findings from the interpretive point of view in a process of semi-automatic ontology extraction.

This is joint work with Hein van den Berg.

Ontology Engineering for and by the Masses: Are We Already There?

Oscar Corcho

Universidad Politecnica de Madrid

Abstract. We can assume that most of the attendees to this conference have created or contributed to the development of at least one ontology, and many of them have several years of experience in ontology development. The area of ontology engineering is already quite mature, hence creating ontologies should not be a very difficult task. We have methodologies that guide us in the process of ontology development; we have plenty of techniques that we can use, from the knowledge acquisition stages to ontology usage; we have tools that facilitate the transition from our ontology conceptualizations to actual implementations, including support for tasks like debugging, documenting, modularising, reasoning, and a large etcétera. However, how many ontology developers are there now in the world? Are they hundreds, thousands, tens of thousands maybe? Not as many as we may like. . . In fact, whenever I setup an heterogeneous ontology development team in a domain, I still find lots of difficulties to get the team running at full speed and with high quality results. In this talk I will share some of my most recent experiences on the setup of several small ontology development teams, composed of a combination of city managers, policy makers and computer scientists, for the development of a set of ontologies for an upcoming technical norm on “Open Data for Smart Cities”, and will discuss on the main success factors as well as threats and weaknesses of the process, with the hope that this can give some light towards making ontology engineering more accessible to all.

Ontology Design Patterns for Large-Scale Data Interchange and Discovery

Pascal Hitzler

Data Semantics (DaSe) Laboratory, Wright State University, USA
pascal.hitzler@wright.edu
<http://www.pascal-hitzler.de>

Abstract. Data and information integration remains a major challenge for our modern information-driven society whereby people and organizations often have to deal with large data volumes coming from semantically heterogeneous sources featuring significant variety between them. In this context, data integration aims to provide a unified view over data residing at different sources through a global schema, which can be formalized as an ontology. From the end-users perspective, the data integration problem can be seen as a data access problem whereby the emphasis is on how such a unified view should help the nontechnical end-users in accessing the data from such heterogeneous sources. Early efforts to solve these problems led to a number of relational database integration approaches which have been very useful in specific situations. Unfortunately, they still require very significant manual efforts in creating and maintaining the mappings between the global and local schema, as the resulting integrations are often rigid and not transferable to new application scenarios without investing even more human expert resources, and furthermore, the global schema expressivity is limited which makes it difficult for the end-users to pose ad-hoc queries for their information needs.

Ontology design patterns have been conceived as modular and reusable building blocks for ontology modeling. We argue that a principled use of ontology design patterns also improve large-scale data integration under heterogeneity, as compared to the use of a monolithic ontology as global schema. In particular, the adoption of ontology design patterns can simplify several key aspects of the ontology application life cycle, including knowledge acquisition from experts, collaborative modeling and updates, incorporation of different perspectives, data-model alignment, and social barriers to adoption.

We report on recent progress we have made with this approach as part of our work on improving data discovery in the Earth Sciences, and point out key challenges on the road ahead.
