IFIP – The International Federation for Information Processing

IFIP was founded in 1960 under the auspices of UNESCO, following the First World Computer Congress held in Paris the previous year. An umbrella organization for societies working in information processing, IFIP's aim is two-fold: to support information processing within its member countries and to encourage technology transfer to developing nations. As its mission statement clearly states,

IFIP's mission is to be the leading, truly international, apolitical organization which encourages and assists in the development, exploitation and application of information technology for the benefit of all people.

IFIP is a non-profitmaking organization, run almost solely by 2500 volunteers. It operates through a number of technical committees, which organize events and publications. IFIP's events range from an international congress to local seminars, but the most important are:

- The IFIP World Computer Congress, held every second year;
- Open conferences;
- Working conferences.

The flagship event is the IFIP World Computer Congress, at which both invited and contributed papers are presented. Contributed papers are rigorously refereed and the rejection rate is high.

As with the Congress, participation in the open conferences is open to all and papers may be invited or submitted. Again, submitted papers are stringently refereed.

The working conferences are structured differently. They are usually run by a working group and attendance is small and by invitation only. Their purpose is to create an atmosphere conducive to innovation and development. Refereeing is also rigorous and papers are subjected to extensive group discussion.

Publications arising from IFIP events vary. The papers presented at the IFIP World Computer Congress and at open conferences are published as conference proceedings, while the results of the working conferences are often published as collections of selected and edited papers.

Any national society whose primary activity is about information processing may apply to become a full member of IFIP, although full membership is restricted to one society per country. Full members are entitled to vote at the annual General Assembly, National societies preferring a less committed involvement may apply for associate or corresponding membership. Associate members enjoy the same benefits as full members, but without voting rights. Corresponding members are not represented in IFIP bodies. Affiliated membership is open to non-national societies, and individual and honorary membership schemes are also offered.

Preface

Modern companies in industrially advanced countries face the low growth of the global economy. Every enterprise makes various efforts to survive in such a severe management environment. Mass production style has disappeared, and manufacturers must provide goods that the customer favors when the customer wants them.

Organizations today cannot do it alone. Most modern enterprises depend on the collective efforts of a group of trading partners to stretch a supply chain from the raw material supplier to the end customer. A trading partner in this context means any external organization that plays an integral role in the enterprise and whose business fortune depends wholly or partly on the success of the enterprise. This includes factories, contract manufacturers, sub-assembly plants, distribution centers, wholesalers, retailers, carriers, freight forwarder services, customer broker services, international procurement organizations, and value-added network services. Building such resilient global value-chains is needed.

Current enterprises also face global environment issues. Saving energy, reduction of industrial waste, and reutilization of natural resources are required in all operational stages to realize environmentally friendly production and logistics systems. Modern manufacturing enterprises should cope well with such issues as enterprise management responsibilities.

This book collects suggestions of leading researchers and practitioners from all around the world, including conceptual frameworks of new approaches, developments of novel technologies, and case studies of practical issues. The book comprises five main categories, including specific subtopic themes as follows:

- Collaborative networks
 - Collaborative tools in production management
 - Collaborative design
 - Distributed systems and multi-agent technologies
 - ICT for collaborative manufacturing
 - Innovation for enterprise collaboration
 - Collaborative information networks
 - Performance measurement and benchmarking
 - B2B, B2C
- Globalization and production management
 - Inventory management in large supply chains
 - Global supply chain systems
 - Mass customization
 - Social and cultural aspects of global supply chains

- Worldwide procurement
- Logistics and distribution management
- Knowledge-based production management
 - Computational intelligence in production management
 - Intelligent manufacturing systems
 - Knowledge engineering
 - Knowledge-based PLM
 - Production planning and control
 - Scheduling
 - Automatic learning systems
 - Modeling and simulation of business and operational processes
 - Supply chain simulation
 - Social networks for manufacturing
 - Virtual factory
 - Agile and flexible manufacturing systems
- Project management, engineering management, and quality management
 - Closed loop design
 - Highly customized products and services
 - Quality management
 - QFD
 - Six-sigma
 - New products development
 - Engineering management
 - Engineering and management education
- Sustainability and production management
 - Eco-design and eco-innovation
 - Energy efficiency in manufacturing
 - Green manufacturing
 - Life cycle assessment
 - Remanufacturing
 - Disassembly and recycling
 - Sustainable supply chains
 - Sustainability in global supply networks
 - Smart factory

The papers in this book were peer reviewed and presented at the advanced production management systems conference – APMS 2015 – which was held in Tokyo, Japan, September 7–9, 2015. The conference was supported by Working Group 7 of Technical Committee 5 of the International Federation for Information Processing called Advances in Production Management Systems (APMS) and was hosted by Musashi University, Tokyo, Japan.

There were 185 full paper submissions, and 163 of them were accepted through peer review. Thus, the acceptance ratio is about 88 %. As the book editors, we would like to thank all the contributors for the high-quality presentation of their papers. We would also like to thank the members of the international Program Committee for their work in reviewing and selecting the papers.

Potential of Building Information Modeling – BIM - Tools Inside Brazilian Civil Construction Scenery	299
<i>Samuel Dereste dos Santos, Oduvaldo Vendrametto, Miguel León González, and Creusa Fernandes Correia</i>	
Cyber Physical Production Control: Transparency and High Resolution in Production Control	308
<i>Volker Stich, Niklas Hering, and Jan Meißner</i>	
Proposing a Standard Template for Construction Site Layout: A Case Study of a Norwegian Contractor	316
<i>Børge Sjøbakk and Lars Skjelstad</i>	
Priority Modes of Transport for Soybeans from the Center-West Region in Brazil	324
<i>Cristina Corrêa de Oliveira, Danilo Medeiros de Castro, Nélio Fernando dos Reis, João Gilberto Mendes dos Reis, and Jair Minoro Abe</i>	

Social Network Analysis of a Supply Network Structural Investigation of the South Korean Automotive Industry	332
<i>Jin-Baeck Kim</i>	
ACD Modeling of Homogeneous Job Shops Having Inline Cells	340
<i>Hyeonsik Kim, Byoung K. Choi, and Hayong Shin</i>	
A Computer-Aided Process Planning Method Considering Production Scheduling	348
<i>Eiji Morinaga, Hiroki Joko, Hidefumi Wakamatsu, and Eiji Arai</i>	
Clustering Human Decision-Making in Production and Logistic Systems	356
<i>Christos Tsagkalidis, Rémy Glardon, and Maryam Darvish</i>	
Standardization, Commonality, Modularity: A Global Economic Perspective	365
<i>Clément Chatras and Vincent Giard</i>	
Knowledge Sharing Using Product Life Cycle Management	376
<i>Pham Cong Cuong, Alexandre Durupt, Nada Matta, Benoit Eynard, and Guillaume Duccellier</i>	
Organizational Capability in Production Scheduling	383
<i>Emrah Arica, Sven Vegard Buer, and Jan Ola Strandhagen</i>	
Linking Information Exchange to Planning and Control: An Overview	391
<i>Kasper Kiil, Heidi C. Dreyer, and Hans-Henrik Hvolby</i>	
More Than What Was Asked for: Company Specific Competence Programs as Innovation Hothouses	399
<i>Hanne O. Finnestrand, Kristoffer Magerøy, and Johan E. Ravn</i>	
Prediction of Process Time for Early Production Planning Purposes	406
<i>Mads Bejlegaard, Thomas Ditlev Brunoe, and Kjeld Nielsen</i>	
Information Logistics Means to Support a Flexible Production?	414
<i>Susanne Altendorfer-Kaiser</i>	
Why Do Plant Managers Struggle to Synchronize Production Capacity and Costs with Demand in Face of Volatility and Uncertainty?: Obstacles Within Strategizing Volume-Oriented Changeability in Practice	422
<i>Manuel Rippel, Johannes Schmiester, and Paul Schönsleben</i>	
How to Support Plant Managers in Strategizing Volume-Oriented Changeability in Volatile and Uncertain Times – Deriving Requirements for a Practice-Oriented Approach	431
<i>Manuel Rippel, Johannes Schmiester, and Paul Schönsleben</i>	

Job Shop Scheduling with Alternative Machines Using a Genetic Algorithm Incorporating Heuristic Rules -Effectiveness of Due-Date Related Information-	439
<i>Parinya Kaweegitbundit and Toru Eguchi</i>	
Big Data Technology for Resilient Failure Management in Production Systems	447
<i>Volker Stich, Felix Jordan, Martin Birkmeier, Kerem Oflazgil, Jan Reschke, and Anna Diews</i>	
Selection of Molding Method for CFRP Automotive Body Parts - Resin Injection vs. Compression	455
<i>Yuji Kageyama, Kenju Akai, Nariaki Nishino, and Kazuro Kageyama</i>	
Paraconsistent Artificial Neural Network Applied in Breast Cancer Diagnosis Support.	464
<i>Carlos Arruda Baltazar, Fábio Vieira do Amaral, Jair Minoru Abe, Alexandre Jacob Sandor Cadim, Caique Zaneti Kirilo, Fábio Luís Pereira, Hélio Côrrea de Araújo, Henry Costa Ungaro, Lauro Henrique de Castro Tomiatti, Luiz Carlos Machi Lozano, Renan dos Santos Tampellini, Renato Hildebrando Parreira, and Uanderson Celestino</i>	
Project Management, Engineering Management, and Quality Management	
Start of Production in Low-Volume Manufacturing Industries: Disturbances and Solutions	475
<i>Siavash Javadi and Jessica Bruch</i>	
Improving Service Quality in Public Transportation in Brazil: How Bus Companies are Simplifying Quality Management Systems and Strategic Planning to Increase Service Level?.	484
<i>Helcio Raymundo, João Gilberto Mendes dos Reis, Pedro L.O. Costa Neto, Oduvaldo Vendrametto, Emerson Rodolfo Abraham, Marcos O. Morais, Carla C. Parizi, Sivanilza Teixeira Machado, Helton R.O. Silva, and Antônio S. Brejão</i>	
A Study on the Effect of Dirt on an Inspection Surface on Defect Detection in Visual Inspection Utilizing Peripheral Vision	492
<i>Ryosuke Nakajima, Yuta Asano, Takuya Hida, and Toshiyuki Matsumoto</i>	
The Main Problems in the Design and Management of MOOCs	500
<i>Luis Naito Mendes Bezerra and Márcia Terra da Silva</i>	
Assessing the Relationship Between Commodity Chains: Ethanol, Corn and Chicken Meat.	507
<i>Eder Ferragi and Irenilza Nääs</i>	

Information Quality in PLM: A Product Design Perspective	515
<i>Stefan Wellsandt, Thorsten Wuest, Karl Hribernik, and Klaus-Dieter Thoben</i>	
Managing Evolving Global Operations Networks	524
<i>Alona Mykhaylenko, Brian Vejrum Wæhrens, and John Johansen</i>	
Production Cost Analysis and Production Planning for Plant Factories Considering Markets	532
<i>Nobuhiro Sugimura, Koji Iwamura, Nguyen Quang Thinh, Kousuke Nakai, Seisuke Fukumoto, and Yoshitaka Tanimizu</i>	
Enhancing an Integrative Course in Industrial Engineering and Management via Realistic Socio-technical Problems and Serious Game Development	541
<i>Nick Szirbik, Christine Pelletier, and Vincent Velthuizen</i>	
Performing Supply Chain Design in Three-Dimensional Concurrent Engineering: Requirements and Challenges	549
<i>Ottar Bakås, Kristoffer Magerøy, Børge Sjøbak, and Maria Kollberg Thomassen</i>	
Learning Evaluation Using Non-classical Logics	558
<i>Genivaldo Carlos Silva and Jair Minoro Abe</i>	
Scrum as Method for Agile Project Management Outside of the Product Development Area	565
<i>Ronny Weinreich, Norbert Neumann, Ralph Riedel, and Egon Müller</i>	
A Behaviour Model for Risk Assessment of Complex Systems Based on HAZOP and Coloured Petri Nets	573
<i>Damiano Nunzio Arena, Dimitris Kiritsis, and Natalia Trapani</i>	
Importance of Bidimensional Data Matrix Code Against Medicine Counterfeiting	582
