Preface

This volume contains the proceedings of the 12th International Conference on Formal Aspects of Component Software (FACS 2015), held at the Universidade Federal Fluminense, Niterói, Brazil, during October 14–16, 2015.

Component-based software development proposes sound engineering principles and techniques to cope with the complexity of software systems. However, many challenging conceptual and technological issues remain. The advent of service-oriented and cloud computing has also brought to the fore new dimensions, such as quality of service and robustness to withstand faults. As software applications themselves become components of wider socio-technical systems, further challenges arise from the need to create and manage interactions.

The FACS series of events addresses the application of formal methods in all aspects of software components and services. Formal methods have provided foundations for component-based software development through research on mathematical models for components, composition and adaptation, and rigorous approaches to verification, deployment, testing, and certification.

FACS 2015 received 33 regular paper submissions, each of which was reviewed by at least three reviewers. Based on the reviews and extensive discussions, the program committee decided to accept 15 regular papers. This volume contains the revised versions of the 15 regular papers, as well as invited papers by Martin Wirsing and David Déharbe.

Many colleagues and friends contributed to FACS 2015. We thank Martin Wirsing, David Déharbe, and Renato Cerqueira for accepting our invitations to give invited talks, and the authors who submitted their work to FACS 2015. We are grateful to the members of the program committee for providing timely and insightful reviews as well as for their involvement in the post-reviewing discussions. Finally, we thank Bruno Lopes for his assistance in organizing FACS 2015, and acknowledge partial financial support from CAPES and CNPq.

November 2015

Contents

OnPlan: A Framework for Simulation-Based Online Planning	1
Software Component Design with the B Method — A Formalization in Isabelle/HOL	31
Asynchronous Coordination of Stateful Autonomic Managers in the Cloud Rim Abid, Gwen Salaün, Noel De Palma, and Soguy Mak-Kare Gueye	48
A Cost/Reward Method for Optimal Infinite Scheduling in Mobile Cloud Computing	66
Luca Aceto, Kim G. Larsen, Andrea Morichetta, and Francesco Tiezzi A Contract-Oriented Middleware	86
A Robust Framework for Securing Composed Web Services	105
Combinatory Synthesis of Classes Using Feature Grammars Jan Bessai, Boris Düdder, George T. Heineman, and Jakob Rehof	123
Towards Modular Verification of Threaded Concurrent Executable Code Generated from DSL Models	141
An Operational Semantics of BPMN Collaboration	161
k-Bisimulation: A Bisimulation for Measuring the Dissimilarity Between Processes	181
Time Complexity of Concurrent Programs – A Technique Based on Behavioural Types –	199

X Contents

Composing Constraint Automata, State-by-State	217
Floating Time Transition System: More Efficient Analysis of Timed Actors Ehsan Khamespanah, Marjan Sirjani, Mahesh Viswanathan, and Ramtin Khosravi	237
Configuration Logics: Modelling Architecture Styles	256
Learning-Based Compositional Model Checking of Behavioral UML Systems	275
Typed Connector Families	294
Formal Architecture Modeling of Sequential C-Programs	312
Author Index	331
