

Studies in Computational Intelligence

Volume 666

Series editor

Janusz Kacprzyk, Polish Academy of Sciences, Warsaw, Poland
e-mail: kacprzyk@ibspan.waw.pl

About this Series

The series “Studies in Computational Intelligence” (SCI) publishes new developments and advances in the various areas of computational intelligence—quickly and with a high quality. The intent is to cover the theory, applications, and design methods of computational intelligence, as embedded in the fields of engineering, computer science, physics and life sciences, as well as the methodologies behind them. The series contains monographs, lecture notes and edited volumes in computational intelligence spanning the areas of neural networks, connectionist systems, genetic algorithms, evolutionary computation, artificial intelligence, cellular automata, self-organizing systems, soft computing, fuzzy systems, and hybrid intelligent systems. Of particular value to both the contributors and the readership are the short publication timeframe and the worldwide distribution, which enable both wide and rapid dissemination of research output.

*This book is dedicated to operations analysts,
computational scientists, decision analysts,
and industrial engineers*

Preface

Recent research trends have shown that industry is inundated with grouping problems that require efficient computational algorithms for grouping system entities based on specific guiding criteria. Grouping problems commonplace in industry include vehicle routing, container loading, equal piles problem, machine-part cell formation, cutting stock problem, job shop scheduling, assembly line balancing, and task assignment. These problems have a group structure with identifiable characteristic features, that is, the need to form efficient groups of entities according to guiding criteria, and the need to allocate those groups to specific assignees in order to satisfy the desired objectives. It is interesting to note that, across all the spectrum of these problems, grouping and allocation criteria are inherently very similar in nature.

The wide spectrum of real-world grouping problems, the striking similarities between their features, and the multi-criteria decisions involved are three major motivating factors behind the research momentum in this area. However, more challenging issues in this field have appeared in recent researches. First, there is an ever-growing need to address uncertainties in various grouping problem situations. Second, decision analysts in the field often call for multi-criteria decision approaches by which multiple criteria can be handled simultaneously. Third, researchers and decision analysts have realized the need for interactive, population-based algorithms that can provide alternative solutions rather than prescribe a single solution to the decision maker. Examples of such approaches are tabu search, particle swarm optimization, ant colony optimization, simulated evolution algorithm, simulated metamorphosis algorithm, genetic algorithms, and grouping genetic algorithms. Thus, in sum, recent research has emphasized the need for development of interactive multi-criteria computational algorithms that can address grouping problems, even in uncertain or fuzzy environments.

Evidently, notable research has focused on advances in genetic algorithms and related hybrid approaches, with application in various problem areas. Current research trends tend to show that there is a high potential for remarkable advances in genetic algorithms and its variants, specifically in grouping genetic algorithms. Genetic algorithm-based approaches offer a more user-friendly, flexible, and

adaptable population-based approach than related algorithms. Given these advantages, further developments and advances in grouping genetic algorithms are quite promising.

The purpose of this book is to provide an account of recent research advances and, above all, applications of grouping genetic algorithm and its variants. The prospective audience of the book “Grouping Genetic Algorithms: Advances and Applications” includes research students, academicians, researchers, decision analysts, software developers, and scientists. It is hoped that, by going through this book, readers will obtain an in-depth understanding of the novel unique features of the algorithm and apply it to specific areas of concern.

The book comprises three parts. Part I presents an in-depth reader-friendly exposition of a wide range of practical grouping problems, and the emerging challenges often experienced in the decision process. Part II presents recent novel developments in grouping genetic algorithms, demonstrating new techniques and unique grouping genetic operators that can handle complex multi-criteria decision problems. Part III focuses on computational applications of grouping genetic algorithms across a wide range of real-world grouping problems, including fleet size and mix vehicle routing, heterogeneous vehicle routing, container loading, machine-part cell formation, cutting stock problem, job shop scheduling, assembly line balancing, task assignment, and other group technology applications. Finally, Part IV provides concluding remarks and suggests further research extensions.

Contents

Part I Introduction

1 Exploring Grouping Problems in Industry	3
1.1 Introduction	3
1.2 Identifying Grouping Problems in Industry	5
1.2.1 Cell Formation in Manufacturing Systems.	5
1.2.2 Assembly Line Balancing	7
1.2.3 Job Shop Scheduling	8
1.2.4 Vehicle Routing Problem	9
1.2.5 Home Healthcare Worker Scheduling	10
1.2.6 Bin Packing Problem.	12
1.2.7 Task Assignment Problem	13
1.2.8 Modular Product Design	14
1.2.9 Group Maintenance Planning.	15
1.2.10 Order Batching	16
1.2.11 Team Formation	17
1.2.12 Earnings Management.	18
1.2.13 Economies of Scale	20
1.2.14 Timetabling	21
1.2.15 Student Grouping for Cooperative Learning	22
1.2.16 Other Problems	23
1.3 Extant Modeling Approaches to Grouping Problems	23
1.4 Structure of the Book	24
References	25
2 Complicating Features in Industrial Grouping Problems	31
2.1 Introduction	31
2.2 Research Methodology	33
2.3 Research Findings.	33
2.4 Complicating Features	36
2.4.1 Model Conceptualization	36
2.4.2 Myriad of Constraints	37

2.4.3	Fuzzy Management Goals	38
2.4.4	Computational Complexity	39
2.5	Suggested Solution Approaches	40
2.6	Summary	40
	References	41

Part II Grouping Genetic Algorithms

3 Grouping Genetic Algorithms: Advances for Real-World

	Grouping Problems	45
3.1	Introduction	45
3.2	Grouping Genetic Algorithm: An Overview	46
3.2.1	Group Encoding	47
3.3	Crossover	48
3.3.1	Mutation	49
3.3.2	Inversion	49
3.4	Grouping Genetic Algorithms: Advances and Innovations	50
3.4.1	Group Encoding Strategies	50
3.4.2	Initialization.	51
3.4.3	Selection Strategies	53
3.4.4	Rank-Based Wheel Selection Strategy.	54
3.4.5	Crossover Strategies	54
3.4.6	Mutation Strategies	56
3.4.7	Inversion	59
3.4.8	Replacement Strategies	61
3.4.9	Termination Strategies.	62
3.5	Application Areas.	63
3.6	Summary	64
	References	65

4 Fuzzy Grouping Genetic Algorithms: Advances for Real-World

	Grouping Problems	67
4.1	Introduction	67
4.2	Preliminaries: Fuzzy Logic Control	69
4.3	Fuzzy Grouping Genetic Algorithms: Advances and Innovations	70
4.3.1	FGGA Coding Scheme	71
4.3.2	Initialization.	72
4.3.3	Fuzzy Fitness Evaluation.	72
4.3.4	Fuzzy Genetic Operators	74
4.3.5	Fuzzy Dynamic Adaptive Operators	80
4.3.6	Termination.	82
4.4	Potential Application Areas	83
4.5	Summary	84
	References	85

Part III Research Applications

5 Multi-Criterion Team Formation Using Fuzzy Grouping	
Genetic Algorithm Approach	89
5.1 Introduction	89
5.2 Related Approaches	90
5.3 The Multi-Criterion Team Formation Problem	91
5.3.1 Problem Description	91
5.3.2 Fuzzy Multi-Criterion Modeling	92
5.4 A Fuzzy Grouping Genetic Algorithm Approach	94
5.4.1 Group Encoding Scheme	94
5.4.2 Initialization	94
5.4.3 Fuzzy Evaluation	95
5.4.4 Selection and Crossover	96
5.4.5 Mutation	98
5.4.6 Inversion	99
5.4.7 Termination	100
5.5 Experimental Tests and Results	100
5.5.1 Experiment 1: Teaching Group Formation	101
5.5.2 Experiment 2: Comparative FGGA Success Rates	102
5.5.3 Experiment 3: Further Extensive Computations	102
5.6 Summary	103
References	104
6 Grouping Learners for Cooperative Learning: Grouping	
Genetic Algorithm Approach	107
6.1 Introduction	107
6.2 Related Literature	108
6.3 Cooperative Learners' Grouping Problem	109
6.4 A Grouping Genetic Algorithm Approach	110
6.4.1 Group Encoding Scheme	111
6.4.2 Initialization	111
6.4.3 Selection and Crossover	112
6.4.4 Mutation	113
6.4.5 Inversion	114
6.4.6 Termination	116
6.5 Computational Results and Discussions	116
6.5.1 Preliminary Experiments	116
6.6 Comparative Results: GGA and Other Approaches	117
6.6.1 Further Experiments	118
6.7 Summary	118

7 Optimizing Order Batching in Order Picking Systems:	
Hybrid Grouping Genetic Algorithm	121
7.1 Introduction	121
7.2 Order Batching Problem	123
7.2.1 Description of the Problem	123
7.2.2 Problem Formulation	124
7.3 Related Solution Approaches	125
7.3.1 Routing Heuristics	125
7.3.2 Mathematical Programming Techniques	127
7.3.3 Constructive Heuristics	127
7.3.4 Metaheuristics	127
7.4 Hybrid Grouping Genetic Algorithm for Order Batching	128
7.4.1 Group Encoding Scheme	128
7.4.2 Initialization	128
7.4.3 Selection and Crossover	129
7.4.4 Mutation with Constructive Insertion	131
7.4.5 Inversion	132
7.4.6 Termination	133
7.5 Computation Experiments	134
7.6 Computational Results and Discussions	135
7.6.1 Preliminary Experiments	135
7.6.2 Further Experiments	136
7.7 Summary	138
References	138
8 Fleet Size and Mix Vehicle Routing: A Multi-Criterion Grouping Genetic Algorithm Approach	141
8.1 Introduction	141
8.2 Fleet Size and Mix Vehicle Routing Problem Description	142
8.3 Related Work	143
8.3.1 Vehicle Routing: A Background	143
8.3.2 Approaches to Fleet Size and Mix Vehicle Routing	144
8.4 Multi-Criterion Grouping Genetic Algorithm Approach	145
8.4.1 GGA Encoding	145
8.4.2 Initialization	147
8.4.3 Selection	148
8.4.4 Crossover	148
8.4.5 Mutation	149
8.4.6 Inversion	151
8.4.7 Diversification	152
8.4.8 GGA Computational Implementation	153

8.5	Computational Tests and Discussions	154
8.5.1	Computational Experiments	154
