Preface

This volume presents a collection of papers focused on the use of data analytics and machine learning techniques to facilitate the integration of renewable energy resources into existing infrastructure and socioeconomic systems. This volume includes papers presented at DARE 2016, the 4th International Workshop on Data Analytics for Renewable Energy Integration, which was hosted by ECML PKDD 2016, and a few invited articles.

In recent times, climate change, energy security, and sustainability have focused much attention on the development of clean and renewable energy sources. However, of equal importance is the issue of integrating these sources into existing infrastructure and socioeconomic systems. While increasing the generating capacities of renewable energy sources is still important, issues such as efficient and cost-effective storage and distribution, demand response, planning, and policy making must be resolved in parallel. These challenges are inherently multidisciplinary and depend heavily on robust and scalable computing techniques and the ability to handle large, complex data sets. The domains of data analytics, pattern recognition, and machine learning are uniquely positioned to offer solutions to many of these challenges. Examples of relevant topics include time series forecasting, the detection of faults, cyber security, smart grid and smart cities, technology integration, demand response, and many others.

This year's event attracted numerous researchers working in the various related domains, both to present and discuss their findings and to share their respective experiences and concerns. We are very grateful to the organizers of ECML PKDD 2016 for hosting DARE 2016, the Program Committee members for their time and assistance, and the Masdar Institute, MIT, and the University of Oldenburg for their support of this timely and important workshop. Last but not least we sincerely thank the authors for their valuable contributions to this volume.

Srinivas Sampalli	Dalhousie University, Canada
Paul Yoo	Bournemouth University, UK
Erik Casagrande	GE, UAE
Randa Herzallah	Aston University, UK

Contents

Locating Faults in Photovoltaic Systems Data.	1
<i>Alexander Kogler and Patrick Traxler</i>	
Forecasting of Smart Meter Time Series Based on Neural Networks	10
<i>Thierry Zufferey, Andreas Ulbig, Stephan Koch, and Gabriela Hug</i>	
Cybersecurity for Smart Cities: A Brief Review	22
<i>Armin Alibasic, Reem Al Junaibi, Zeyar Aung, Wei Lee Woon, and Mohammad Atif Omar</i>	
Machine Learning Prediction of Photovoltaic Energy from Satellite Sources . . .	31
<i>Alejandro Catalina, Alberto Torres-Barrán, and José R. Dorronsoro</i>	
Approximate Probabilistic Power Flow	43
<i>Carlos D. Zuluaga and Mauricio A. Álvarez</i>	
Dealing with Uncertainty: An Empirical Study on the Relevance of Renewable Energy Forecasting Methods	54
<i>Robert Ulbricht, Anna Thoß, Hilko Donker, Gunter Gräfe, and Wolfgang Lehner</i>	
Measuring Stakeholders' Perceptions of Cybersecurity for Renewable Energy Systems	67
<i>Stuart Madnick, Mohammad S. Jalali, Michael Siegel, Yang Lee, Diane Strong, Richard Wang, Wee Horng Ang, Vicki Deng, and Dinsha Mistree</i>	
Selection of Numerical Weather Forecast Features for PV Power Predictions with Random Forests	78
<i>Björn Wolff, Oliver Kramer, and Detlev Heinemann</i>	
Evolutionary Multi-objective Ensembles for Wind Power Prediction	92
<i>Justin Heinemann, Jörg Lässig, and Oliver Kramer</i>	
A Semi-automatic Approach for Tech Mining and Interactive Taxonomy Visualization	102
<i>Ioannis Karakatsanis, Alexandros Tsoupos, and Wei Lee Woon</i>	
Decomposition of Aggregate Electricity Demand into the Seasonal-Thermal Components for Demand-Side Management Applications in “Smart Grids” . . .	116
<i>Andreas Paisios and Sasa Djokic</i>	
Author Index	137
