Preface

Along with the fast development of mobile communications technologies, the amount of high-quality wireless services required is increasing exponentially. According to the prediction of Cisco VNI Mobile Forecast 2016, global mobile data traffic will increase nearly eightfold between 2015 and 2020, and mobile network connection speeds will increase more than threefold by 2020. Hence, there are still big gaps between future requirements and current communication technologies, even using 4G/5G. How to integrate the limited wireless resources with some intelligent algorithms or schemes and boost potential benefits is the focus of the conference. As an emerging discipline, machine learning is a subfield of computer science that evolved from the study of pattern recognition and computational learning theory in artificial intelligence, and explores the study and construction of algorithms that can learn from and make predictions about complicated scenarios. In communication systems, the previous/current radio situations and communication paradigms should be well considered to obtain a high quality of service (QoS), such as the available spectrum, limited energy, antenna configurations, and heterogeneous properties. Machine learning algorithms facilitate the analysis and prediction of complicated scenarios, and thus to make an optimal actions in OSI seven layers. We hope the integrating of machine-learning algorithms into communication systems will improve the QoS and make the systems smart, intelligent, and efficient.

Contents

Data Mining in Heterogeneous Networks

- An Emergency Event Driven Routing Algorithm for Bi-directional Highway in Vehicular Ad Hoc Networks
Yajie Yang, Demin Li, Guanglin Zhang, Chang Guo, and Saifei Jin 3

Decentralized Learning for Wireless Communication Systems

- A Novel Constellation Shaping Method to Reduce PAPR for Rate Compatible Modulation 15
Min Wang, Qin Zou, and Xiaoqiang Tu
- Application of Four-Channel Broadband Transmitter in Coal Mine 25
Xiaobing Han, Qi Li, and Chenglin Fu

Intelligent Cooperative/Distributed Coding

- A CRC-Aided LDPC Erasure Decoding Algorithm for SEUs Correcting in Small Satellites 35
Hao Zheng, Zinan Song, Shuyi Zhang, Shuo Chai, and Liwei Shao
- An MELP Vocoder Based on UVS and MVF. 44
Tangle Lu and Xiaoqun Zhao
- Optimization of Voiced Excitation Model by MVF Algorithm 53
Bing Xue and Xiaoqun Zhao

Intelligent Cooperative Networks

- Capacity of Content-Centric Hybrid Wireless Networks 65
Jian Liu, Guanglin Zhang, Demin Li, and Jiajie Ren
- D2D-Based Cooperative Uplink Transmission for Vehicular Users 76
Yun Pan, Chao Wang, Fuqiang Liu, and Ping Wang
- Research on Data Transmission Protocol Performance of DTN Relay Channel Based on CFDP 86
Dezhi Li, Yaoqing Ni, Qun Wu, Zhenyong Wang, and Deyang Kong
- Multiple Relay Selection Scheme for Underwater Acoustic Cooperative Communication Based on Steady-State Mean-Square-Error Threshold 97
Zhiyong Liu, Yinghua Wang, and Baoqi Ding

Intelligent Massive MIMO
