About this Series

The series “Studies in Computational Intelligence” (SCI) publishes new developments and advances in the various areas of computational intelligence—quickly and with a high quality. The intent is to cover the theory, applications, and design methods of computational intelligence, as embedded in the fields of engineering, computer science, physics and life sciences, as well as the methodologies behind them. The series contains monographs, lecture notes and edited volumes in computational intelligence spanning the areas of neural networks, connectionist systems, genetic algorithms, evolutionary computation, artificial intelligence, cellular automata, self-organizing systems, soft computing, fuzzy systems, and hybrid intelligent systems. Of particular value to both the contributors and the readership are the short publication timeframe and the worldwide distribution, which enable both wide and rapid dissemination of research output.

Preface

Fuzzy systems are well suited for advanced scientific and engineering applications. They are universal approximators and the knowledge stored in them is represented in the form of fuzzy rules. Initially, such rules were thought to be inherently interpretable. That resulted, among others, from the theory of fuzzy sets proposed by Prof. Lotfi Zadeh, which assumed that fuzzy rules used fuzzy sets and interpretation of a fuzzy set is intuitive. However, in the 1990s researchers drew attention to the fact that the use of a large number of fuzzy rules and sets increases accuracy of system operation but significantly reduces readability of a rule-based notation. Therefore, solutions associated with the term “interpretability” began to appear. Currently, this term goes far beyond the notions of the fuzzy set and the fuzzy rule. The purpose of this book is to show different aspects of interpretable fuzzy systems design in various fields of applications. This book addresses issues of fuzzy sets and systems theory, machine learning, evolutionary algorithms inspired by nature, multi-criterion optimization, classification, biometrics, automatics and control theory.

The book is the result of collaboration with colleagues from the Institute of Computational Intelligence at Częstochowa University of Technology. The author would like to thank Dr. Łukasz Bartczuk, Dr. Krystian Łapa, Dr. Andrzej Przybył and Dr. Marcin Zalaśiński for their cooperation. The author specially thanks Prof. Leszek Rutkowski for his invaluable help and great kindness, which contributed to the writing of this book. The author also thanks his wife Agnieszka, children, Malwina and Patryk, and his parents, Wanda and Józef, for inspirational motivation, heartfelt support and patience.

Contents

1	Introduction	1
	References.	5
2	Selected Topics in Fuzzy Systems Designing	11
2.1	Fuzzy System Description	11
2.1.1	Fuzzy System Implementing Mamdani-Type Inference	14
2.1.2	Fuzzy System Implementing Logical-Type Inference	15
2.2	Fuzzy System Learning Methods	16
2.3	Methods for Evaluation of Fuzzy System Accuracy	20
2.3.1	Accuracy Evaluation of the Systems Used for Modelling	20
2.3.2	Accuracy Evaluation of the Systems Used for Classification	20
2.3.3	Accuracy Evaluation in the Context of Interpretable Fuzzy Systems Designing	21
2.4	Summary	22
	References.	22
3	Introduction to Fuzzy System Interpretability	27
3.1	Fuzzy System Accuracy, Complexity and Interpretability	28
3.2	An Overview of Solutions for Fuzzy Systems Interpretability	30
3.3	Attempts to Systematize Solutions for Fuzzy Systems Interpretability	30
3.4	Basic Fuzzy System Interpretability Criteria	31
3.5	Summary	34
	References.	34

4	Improving Fuzzy Systems Interpretability by Appropriate Selection of Their Structure	37
4.1	Precise Aggregation and Inference Operators	38
4.1.1	Parameterized Triangular Norms	38
4.1.2	Triangular Norms with Weights of Arguments	42
4.1.3	Switchable Triangular Norms	44
4.1.4	Hybrid Aggregation and Inference Operators	46
4.2	Precise Defuzzification Operators	47
4.3	Flexible-Type Fuzzy Systems	49
4.4	Extended Interpretability Criteria of Fuzzy Systems	52
4.5	Simulation Results	55
4.6	Summary	58
	References	58
5	Interpretability of Fuzzy Systems Designed in the Process of Gradient Learning	61
5.1	Initialization of Fuzzy Systems	62
5.2	Gradient Learning of Fuzzy Systems	65
5.3	Fuzzy System Tuning Aimed at Increasing Accuracy	69
5.4	Fuzzy System Reduction Aimed at Maximum Simplification of the Structure	72
5.4.1	Method of Consecutive Eliminations	72
5.4.2	Method of Consecutive Merging	75
5.5	Fuzzy Systems Reduction Aimed at Structure Simplification and Increase of Accuracy	78
5.5.1	Method of the Most Favorable Local Eliminations	79
5.5.2	Method of the Most Favorable Global Eliminations	81
5.6	Simulation Results	83
5.7	Summary	87
	References	88
6	Interpretability of Fuzzy Systems Designed in the Process of Evolutionary Learning	91
6.1	Initializing a Population in Evolutionary Learning	92
6.2	Evolutionary Learning of Fuzzy Systems	94
6.2.1	Evolutionary Learning of Fuzzy Systems Using Single Population	95
6.2.2	Evolutionary Learning of Fuzzy Systems Using Many Populations	106
6.3	Taking into Account Interpretability Criteria of Fuzzy Systems	110
6.3.1	Complexity Evaluation Criterion	110
6.3.2	Fuzzy Sets Position Evaluation Criterion	111
6.3.3	Criterion for Assessing Similarity of Fuzzy Sets Width	113

6.3.4	Criterion for Assessing Coverage of the Data Space by Input Fuzzy Sets	114
6.3.5	Criterion for Assessing Fuzzy Rules Activity	114
6.3.6	Criterion for Assessing the Readability of Weight Values in the Fuzzy Rule Base	115
6.3.7	Criterion for Assessing the Readability of Aggregation and Inference Operators	115
6.3.8	Criterion for Assessing the Defuzzification Mechanism	116
6.4	Simulation Results	116
6.5	Summary	119
	References.	127
7	Case Study: Interpretability of Fuzzy Systems Applied to Nonlinear Modelling and Control	131
7.1	Nonlinear Objects Modelling	131
7.1.1	Description of a Given Class of Objects	132
7.1.2	Description of the Method	135
7.1.3	Simulation Results	137
7.1.4	Conclusions.	141
7.2	Control of CNC Machines with a Jerk Limit	141
7.2.1	Description of the Problem	146
7.2.2	Description of the Method	152
7.2.3	Simulation Results	156
7.2.4	Conclusions.	159
7.3	Summary	159
	References.	160
8	Case Study: Interpretability of Fuzzy Systems Applied to Identity Verification	163
8.1	Identity Verification on the Basis of Characteristic Partitions of the Dynamic Signature.	163
8.1.1	Description of the Method	165
8.1.2	Simulation Results	177
8.1.3	Conclusions.	181
8.2	Identity Verification on the Basis of Characteristic Features of the Dynamic Signature.	182
8.2.1	Description of the Method	182
8.2.2	Simulation Results	185
8.2.3	Conclusions.	186
8.3	Summary	186
	References.	187
9	Concluding Remarks and Future Perspectives	191
	References.	193
	Index	195
