General Co-chairs and Editors' Message for OnTheMove 2017

The OnTheMove 2017 event held October 23–27 in Rhodes, Greece, further consolidated the importance of the series of annual conferences that was started in 2002 in Irvine, California. It then moved to Catania, Sicily in 2003, to Cyprus in 2004 and 2005, Montpellier in 2006, Vilamoura in 2007 and 2009, in 2008 to Monterrey, Mexico, to Heraklion, Crete in 2010 and 2011, Rome 2012, Graz in 2013, Amantea, Italy in 2014 and lastly in Rhodes in 2015 and 2016 as well.

This prime event continues to attract a diverse and relevant selection of today's research worldwide on the scientific concepts underlying new computing paradigms, which of necessity must be distributed, heterogeneous and supporting an environment of resources that are autonomous yet must meaningfully cooperate. Indeed, as such large, complex and networked intelligent information systems become the focus and norm for computing, there continues to be an acute and even increasing need to address the respective software, system, and enterprise issues and discuss them face to face in an integrated forum that covers methodological, semantic, theoretical, and application issues as well. As we all realize, e-mail, the Internet, and even video conferences are not by themselves optimal or even sufficient for effective and efficient scientific exchange.

The OnTheMove (OTM) International Federated Conference series has been created precisely to cover the scientific exchange needs of the communities that work in the broad yet closely connected fundamental technological spectrum of Web-based distributed computing. The OTM program every year covers data and Web semantics, distributed objects, Web services, databases, information systems, enterprise workflow and collaboration, ubiquity, interoperability, mobility, and grid and high-performance computing.

OnTheMove is proud to give meaning to the “federated” aspect in its full title: It aspires to be a primary scientific meeting place where all aspects of research and development of Internet- and intranet-based systems in organizations and for e-business are discussed in a scientifically motivated way, in a forum of interconnected workshops and conferences. This year's 15th edition of the OTM Federated Conferences event therefore once more provided an opportunity for researchers and practitioners to understand, discuss, and publish these developments within the broader context of distributed, ubiquitous computing. To further promote synergy and coherence, the main conferences of OTM 2017 were conceived against a background of their three interlocking global themes:

- Trusted Cloud Computing Infrastructures Emphasizing Security and Privacy
- Technology and Methodology for Data and Knowledge Resources on the (Semantic) Web

- Deployment of Collaborative and Social Computing for and in an Enterprise Context

Originally the federative structure of OTM was formed by the co-location of three related, complementary, and successful main conference series: DOA (Distributed Objects and Applications, held since 1999), covering the relevant infrastructure-enabling technologies, ODBASE (Ontologies, DataBases and Applications of SEmantics, since 2002) covering Web semantics, XML databases and ontologies, and of course CoopIS (Cooperative Information Systems, held since 1993) which studies the application of these technologies in an enterprise context through, e.g., workflow systems and knowledge management. In the 2011 edition security aspects issues, originally started as topics of the IS workshop in OTM 2006, became the focus of DOA as secure virtual infrastructures, further broadened to cover aspects of trust and privacy in so-called Cloud-based systems. As this latter aspect came to dominate agendas in this and overlapping research communities, we decided in 2014 to rename the event as the Cloud and Trusted Computing (C&TC) conference, and originally launched in a workshop format.

These three main conferences specifically seek high-quality, contributions of a more mature nature and encourage researchers to treat their respective topics within a framework that simultaneously incorporates (a) theory, (b) conceptual design and development, (c) methodology and pragmatics, and (d) application in particular case studies and industrial solutions.

As in previous years we again solicited and selected additional quality workshop proposals to complement the more mature and “archival” nature of the main conferences. Our workshops are intended to serve as “incubators” for emergent research results in selected areas related, or becoming related, to the general domain of Web-based distributed computing. This year this difficult and time-consuming job of selecting and coordinating the workshops was brought to a successful end by Ioana Ciuciu, and we were very glad to see that our earlier successful workshops (EI2N, META4eS, FBM) re-appeared in 2017, in some cases in alliance with other older or newly emerging workshops. The Fact Based Modeling (FBM) workshop in 2015 succeeded and expanded the scope of the successful earlier ORM workshop. The Industry Case Studies Program, started in 2011 under the leadership of Hervé Panetto and OMG's Richard Mark Soley, further gained momentum and visibility in its 7th edition this year.

The OTM registration format (“one workshop resp. conference buys all workshops resp. conferences”) actively intends to promote synergy between related areas in the field of distributed computing and to stimulate workshop audiences to productively mingle with each other and, optionally, with those of the main conferences. In particular EI2N continues to so create and exploit a visible cross-pollination with CoopIS.

We were very happy to see that in 2017 the number of quality submissions for the OnTheMove Academy (OTMA) noticeably increased. OTMA implements our unique, actively coached and therefore very time- and effort-intensive formula to bring PhD students together, and aims to carry our “vision for the future” in research in the areas covered by OTM. Its 2017 edition was organized and managed by a dedicated team of

collaborators and faculty, Peter Spyns, Maria-Esther Vidal, inspired as always by OTMA Dean, Erich Neuhold.

In the OTM Academy, PhD research proposals are submitted by students for peer review; selected submissions and their approaches are to be presented by the students in front of a wider audience at the conference, and are independently and extensively analyzed and discussed in front of this audience by a panel of senior professors. One may readily appreciate the time, effort, and funds invested in this by OnTheMove and especially by the OTMA Faculty.

As the three main conferences and the associated workshops all share the distributed aspects of modern computing systems, they experience the application pull created by the Internet and by the so-called Semantic Web, in particular developments of big data, increased importance of security issues, and the globalization of mobile-based technologies. For ODBASE 2017, the focus somewhat shifted from knowledge bases and methods required for enabling the use of formal semantics in Web-based databases and information systems to applications, especially those within IT-driven communities. For CoopIS 2017, the focus as before was on the interaction of such technologies and methods with business process issues, such as occur in networked organizations and enterprises. These subject areas overlap in a scientifically natural and fascinating fashion and many submissions in fact also covered and exploited the mutual impact among them. For our event C&TC 2017, the primary emphasis was again squarely put on the virtual and security aspects of Web-based computing in the broadest sense. As with the earlier OnTheMove editions, the organizers wanted to stimulate this cross-pollination by a program of engaging keynote speakers from academia and industry and shared by all OTM component events. We are quite proud to list for this year:

- Stephen Mellor, Industrial Internet Consortium, Needham, USA
- Markus Lanthaler, Google, Switzerland

The general downturn in submissions observed in recent years for almost all conferences in computer science and IT has also affected OnTheMove, but this year the harvest again stabilized at a total of 180 submissions for the three main conferences and 40 submissions in total for the workshops. Not only may we indeed again claim success in attracting a representative volume of scientific papers, many from the USA and Asia, but these numbers of course allow the respective Program Committees to again compose a high-quality cross-section of current research in the areas covered by OTM. Acceptance rates vary but the aim was to stay consistently at about one accepted full paper for three submitted, yet as always these rates are subject to professional peer assessment of proper scientific quality.

As usual we separated the proceedings into two volumes with their own titles, one for the main conferences and one for the workshops and posters. But in a different approach to previous years, we decided the latter should appear after the event and thus allow workshop authors to improve their peer-reviewed papers based on the critiques by the Program Committees and on the live interaction at OTM. The resulting additional complexity and effort of editing the proceedings was professionally shouldered by our leading editor, Christophe Debruyne, with the general chairs for the conference volume, and with Ioana Ciuciu and Hervé Panetto for the workshop volume. We are

again most grateful to the Springer LNCS team in Heidelberg for their professional support, suggestions, and meticulous collaboration in producing the files and indexes ready for downloading on the USB sticks. It is a pleasure to work with staff that so deeply understands the scientific context at large and the specific logistics of conference proceedings publication.

The reviewing process by the respective OTM Program Committees was performed to professional quality standards: Each paper review in the main conferences was assigned to at least three referees, with arbitrated e-mail discussions in the case of strongly diverging evaluations. It may be worth emphasizing once more that it is an explicit OnTheMove policy that all conference Program Committees and chairs make their selections in a completely sovereign manner, autonomous and independent from any OTM organizational considerations. As in recent years, proceedings in paper form are now only available to be ordered separately.

The general chairs are once more especially grateful to the many people directly or indirectly involved in the set-up of these federated conferences. Not everyone realizes the large number of qualified persons that need to be involved, and the huge amount of work, commitment, and financial risk in the uncertain economic and funding climate of 2017 that is entailed by the organization of an event like OTM. Apart from the persons in their roles mentioned earlier, we therefore wish to thank in particular explicitly our main conference Program Committee chairs:

- CoopIS 2017: Mike Papazoglou, Walid Gaaloul, and Liang Zhang
- ODBASE 2017: Declan O'Sullivan, Joseph Davis, and Satya Sahoo
- C&TC 2017: Adrian Paschke, Hans Weigand, and Nick Bassiliades

And similarly we thank the Program Committee (Co-)chairs of the 2017 ICSP, OTMA and Workshops (in their order of appearance on the website): Peter Spyns, Maria-Esther Vidal, Mario Lezoche, Wided Guédria, Qing Li, Georg Weichhart, Peter Bollen, Hans Mulder, Maurice Nijssen, Anna Fensel, and Ioana Ciuciu. Together with their many Program Committee members, they performed a superb and professional job in managing the difficult yet existential process of peer review and selection of the best papers from the harvest of submissions. We all also owe a significant debt of gratitude to our supremely competent and experienced conference secretariat and technical admin staff in Guadalajara and Dublin, respectively, Daniel Meersman and Christophe Debruyne.

The general conference and workshop co-chairs also thankfully acknowledge the academic freedom, logistic support, and facilities they enjoy from their respective institutions — Technical University of Graz, Austria; Université de Lorraine, Nancy, France; Latrobe University, Melbourne, Australia; and Babes-Bolyai University, Cluj, Romania — without which such a project quite simply would not be feasible. Reader, we do hope that the results of this federated scientific enterprise contribute to your research and your place in the scientific network... and we hope to welcome you at next year's event!

September 2017

Organization

OTM (On The Move) is a federated event involving a series of major international conferences and workshops. These proceedings contain the papers presented at the OTM 2017 Federated conferences, consisting of CoopIS 2017 (Cooperative Information Systems), C&TC 2017 (Cloud and Trusted Computing), and ODBASE 2017 (Ontologies, Databases, and Applications of Semantics).

OnTheMove 2017 Keynotes

Pragmatic Semantics at Web Scale

Markus Lanthaler

Google, Switzerland

Short Bio

Dr. Markus Lanthaler is a software engineer and tech lead at Google where he currently works on YouTube. He received his Ph.D. in Computer Science from the Graz University of Technology in 2014 for his research on Web APIs and Linked Data. Dr. Lanthaler is one of the core designers of JSON-LD and the inventor of Hydra. He has published several scientific articles, is a frequent speaker at conferences, and chairs the Hydra W3C Community Group.

Talk

Despite huge investments, the traditional Semantic Web stack failed to gain widespread adoption and deliver on its promises. The proposed solutions focused almost exclusively on theoretical purity at the expense of their usability. Both academia and industry ignored for a long time the fact that the Web is more a social creation than a technical one. After a long period of disillusionment, we see a renewed interest in the problems the Semantic Web set out to solve and first practical approaches delivering promising results. More than 30% of all websites contain structured information now. Initiatives such as Schema.org allow, e.g., search engines to extract and understand such data, integrate it, and create knowledge graphs to improve their services.

This talk analyzes the problems that hindered the adoption of the Semantic Web, present new, promising technologies and shows how they might be used to build the foundation of the longstanding vision of a Semantic Web of Services.

Evolution of the Industrial Internet of Things: Preparing for Change

Stephen Mellor

Industrial Internet Consortium, Needham, MA 02492, USA

Short Bio

Stephen Mellor is the Chief Technical Officer for the Industrial Internet Consortium, where he directs the standards requirements and technology & security priorities for the Industrial Internet. In that role, he coordinates the activities of the several engineering, architecture, security and testbed working groups and teams. He also co-chairs both the Definitions, Taxonomy and Reference Architecture workgroup and the Use Cases workgroup for the NIST CPS PWG (National Institute for Standards and Technology Cyberphysical System Public Working Group).

He is a well-known technology consultant on methods for the construction of real-time and embedded systems, a signatory to the Agile Manifesto, and adjunct professor at the Australian National University in Canberra, ACT, Australia. Stephen is the author of Structured Development for Real-Time Systems, Object Lifecycles, Executable UML, and MDA Distilled.

Until recently, he was Chief Scientist of the Embedded Software Division at Mentor Graphics, and founder and past president of Project Technology, Inc., before its acquisition. He participated in multiple UML/modeling-related activities at the Object Management Group (OMG), and was a member of the OMG Architecture Board, which is the final technical gateway for all OMG standards. Stephen was the Chairman of the Advisory Board to IEEE Software for ten years and a two-time Guest Editor of the magazine, most recently for an issue on Model-Driven Development.

Talk

The fundamental technological trends presently are more connectivity and more capability to analyze large quantities of data cheaply. But no one knows where those technological trends will take us, so we need to prepare for change.

Prediction is difficult, especially about the future, as several people are reputed to have said. But this keynote will peer ahead into several areas that we can see need attention, such as:

- Security for everything
- Innovation and funding
- Learning, deployment and competitiveness

We need strategies to prepare for evolution in these areas, and we also need to understand longer term trends. Already we see improvements in operational efficiency, and changes in the economy from pay-per-asset to pay-per-use. More changes are likely, towards pay-per-outcome and direct consumer access to “pull” products autonomously.

These changes will fundamentally change the economy and drive technological innovation. The industrial internet is only at the beginning of perhaps forty more years of change.

ProLoD: An Efficient Framework for Processing Logistics Data	698
<i>Mohammad AlShaer, Yehia Taher, Rafiqul Haque, Mohand-Saïd Hacid, and Mohamed Dbouk</i>	
Ubiquity: Extensible Persistence as a Service for Heterogeneous Container-Based Frameworks	716
<i>Mohamed Mohamed, Amit Warke, Dean Hildebrand, Robert Engel, Heiko Ludwig, and Nagapramod Mandagere</i>	
A Formal Approach for Correct Elastic Package-Based Free and Open Source Software Composition in Cloud.	732
<i>Imed Abbassi, Mohamed Graïet, Sindyaana Jlassi, Abir Elkhalfa, and Layth Sliman</i>	

An Optimization-Based Approach for Cloud Solution Design 751
Aly Megahed, Ahmed Nazeem, Peifeng Yin, Samir Tata,
Hamid Reza Motahari Nezhad, and Taiga Nakamura

Author Index 765

Contents – Part II

Cloud and Trusted Computing (C&TC) 2017

Property Preserving Encryption in NoSQL Wide Column Stores	3
<i>Tim Waage and Lena Wiese</i>	
Towards a JSON-Based Fast Policy Evaluation Framework (Short Paper) . . .	22
<i>Hao Jiang and Ahmed Bouabdallah</i>	
Gibbon: An Availability Evaluation Framework for Distributed Databases . . .	31
<i>Daniel Seybold, Christopher B. Hauser, Simon Volpert, and Jörg Domaschka</i>	
Locality-Aware GC Optimisations for Big Data Workloads	50
<i>Duarte Patricio, Rodrigo Bruno, José Simão, Paulo Ferreira, and Luís Veiga</i>	
FairCloud: Truthful Cloud Scheduling with Continuous and Combinatorial Auctions	68
<i>Artur Fonseca, José Simão, and Luís Veiga</i>	
A Novel WebGIS-Based Situational Awareness Platform for Trustworthy Big Data Integration and Analytics in Mobility Context	86
<i>Susanna Bonura, Giuseppe Cammarata, Rosolino Finazzo, Giuseppe Francaviglia, and Vito Morreale</i>	
On the Verification of Software Vulnerabilities During Static Code Analysis Using Data Mining Techniques (Short Paper)	99
<i>Foteini Cheirdari and George Karabatis</i>	

International Conference on Ontologies, DataBases, and Applications of Semantics (ODBASE) 2017

Linked Data and Ontology Reference Model for Infectious Disease Reporting Systems	109
<i>Olga Streibel, Felix Kybranz, and Göran Kirchner</i>	
PFSgeo: Preference-Enriched Faceted Search for Geographical Data	125
<i>Panagiotis Lionakis and Yannis Tzitzikas</i>	
Speeding up Publication of Linked Data Using Data Chunking in LinkedPipes ETL	144
<i>Jakub Klímek and Petr Škoda</i>	

A Particle Swarm-Based Approach for Semantic Similarity Computation	161
<i>Samira Babalou, Alsayed Algergawy, and Birgitta König-Ries</i>	
Agent-Based Assistance in Ambient Assisted Living Through Reinforcement Learning and Semantic Technologies (Short Paper)	180
<i>Nicole Merkle and Stefan Zander</i>	
On the Need for Applications Aware Adaptive Middleware in Real-Time RDF Data Analysis (Short Paper)	189
<i>Zia Ush Shamszaman and Muhammad Intizar Ali</i>	
Learning Probabilistic Relational Models Using an Ontology of Transformation Processes	198
<i>Melanie Munch, Pierre-Henri Wuillemin, Cristina Manfredotti, Juliette Dibie, and Stephane Dervaux</i>	
ORDAIN: An Ontology for Trust Management in the Internet of Things (Short Paper)	216
<i>Kalliopi Kravari and Nick Bassiliades</i>	
APOPSIS: A Web-Based Platform for the Analysis of Structured Dialogues . . .	224
<i>Elisjana Ymeralli, Giorgos Flouris, Theodore Patkos, and Dimitris Plexousakis</i>	
Identifying Opinion Drivers on Social Media	242
<i>Anish Bhanushali, Raksha Pavagada Subbanarasimha, and Srinath Srinivasa</i>	
Representing Fashion Product Data with Schema.org: Approach and Use Cases	254
<i>Alex Stolz, Martin Hepp, and Aleksei Hemminger</i>	
Semantic Modeling and Inference with Episodic Organization for Managing Personal Digital Traces (Short Paper)	273
<i>Varvara Kalokyri, Alexander Borgida, Amélie Marian, and Daniela Vianna</i>	
Linked Open Data for Linguists: Publishing the Hartmann von Aue-Portal in RDF	281
<i>Alex Stolz, Martin Hepp, and Roy A. Boggs</i>	
A Survey of Approaches to Representing SPARQL Variables in SQL Queries.	300
<i>Miloš Chaloupka and Martin Nečaský</i>	
Semantic OLAP Patterns: Elements of Reusable Business Analytics	318
<i>Christoph G. Schuetz, Simon Schausberger, Ilko Kovacic, and Michael Schrefl</i>	

An Extensible Ontology Modeling Approach Using Post Coordinated Expressions for Semantic Provenance in Biomedical Research	337
<i>Joshua Valdez, Michael Rueschman, Matthew Kim, Sara Arabyarmohammadi, Susan Redline, and Satya S. Sahoo</i>	
Complete Semantics to Empower Touristic Service Providers	353
<i>Zaenal Akbar, Elias Kärle, Oleksandra Panasiuk, Umutcan Şimşek, Ioan Toma, and Dieter Fensel</i>	
Distributed Holistic Clustering on Linked Data	371
<i>Markus Nentwig, Anika Groß, Maximilian Möller, and Erhard Rahm</i>	
Ontologies for Commitment-Based Smart Contracts.	383
<i>Joost de Kruijff and Hans Weigand</i>	
A Framework for User-Driven Mapping Discovery in Rich Spaces of Heterogeneous Data.	399
<i>Federica Mandreoli</i>	
Ontologies and Human Users: A Systematic Analysis of the Influence of Ontology Documentation on Community Agreement About Type Membership	418
<i>Francesca Zarl, Martin Hepp, Alex Stolz, and Walter Gerbino</i>	
DLUBM: A Benchmark for Distributed Linked Data Knowledge Base Systems	427
<i>Felix Leif Keppmann, Maria Maleshkova, and Andreas Harth</i>	
Norwegian State of Estate Report as Linked Open Data.	445
<i>Ling Shi, Dina Sukhobok, Nikolay Nikolov, and Dumitru Roman</i>	
The InfraRisk Ontology: Enabling Semantic Interoperability for Critical Infrastructures at Risk from Natural Hazards	463
<i>Dumitru Roman, Dina Sukhobok, Nikolay Nikolov, Brian Elvesæter, and Antoine Pultier</i>	
Usability of Visual Data Profiling in Data Cleaning and Transformation	480
<i>Björn Marius von Zernichow and Dumitru Roman</i>	
Semantic-Based Approach for Low-Effort Engineering of Automation Systems	497
<i>Aparna Saisree Thuluva, Kirill Dorofeev, Monika Wenger, Darko Anicic, and Sebastian Rudolph</i>	
Author Index	513
