Preface

This volume contains papers selected for presentation at the technical and invited special sessions of the 2017 International Conference on Brain Informatics (BI 2017), which was held at the Grand Gongda Jianguo Hotel, Beijing, China, during November 16–18, 2017. The conference was co-organized by Beijing University of Technology, Institute of Automation, Chinese Academy of Sciences, Web Intelligence Consortium (WIC), and IEEE Computational Intelligence Society Task Force on Brain Informatics (IEEE-CIS TF-BI).

Brain informatics (BI) started the exploration as a research field with the vision of investigating the brain from the perspective of informatics. First, brain informatics combines aspects of cognitive science, neuroscience, machine learning, big data analytics, AI, and ICT to study the brain as a general information processing system. Second, new measurements and informatics equipment, tools, and platforms are revolutionizing the way we understand the brain. Third, starting from its proposal as a field, brain informatics has the goal of inspiring future artificial intelligence, especially Web intelligence.

The series of Brain Informatics conferences started with the WICI International Workshop on Web Intelligence Meets Brain Informatics, held in Beijing, China in 2006. The next four conferences of Brain Informatics in 2009, 2010, 2011, and 2012 were held in Beijing, China, Toronto, Canada, Lanzhou, China, and Macau, China, respectively. Since 2013, “health” was added to the conference title with an emphasis on real-world applications of brain research in human health and well-being and BHI 2013, BIH 2014, BIH 2015, and BIH 2016 were held in Maebashi, Japan, Warsaw, Poland, London, UK, and Omaha, USA, respectively. This year, we celebrated the tenth anniversary of Brain Informatics. This grand event in Beijing was co-hosted by the Beijing University of Technology, and the Institute of Automation, Chinese Academy of Sciences.

BI addresses the computational, cognitive, physiological, biological, physical, ecological, and social perspectives of brain informatics, as well as topics related to mental health and well-being. It also welcomes emerging information technologies, including but not limited to Internet/Web of Things (IoT/WoT), cloud computing, big data analytics, and interactive knowledge discovery related to brain research. BI also encourages research exploring how advanced computing technologies are applied to and make a difference in various large-scale brain studies and their applications.

Informatics-enabled studies are transforming brain science. New methodologies enhance human interpretive powers when dealing with big data sets increasingly derived from advanced neuro-imaging technologies, including fMRI, PET, MEG, EEG, and fNIRS, as well as from other sources like eye-tracking and wearable, portable, micro and nano devices. New experimental methods, such as in toto imaging, deep tissue imaging, opto-genetics and dense-electrode recording, are generating massive amounts of brain data at very fine spatial and temporal resolutions. These

technologies allow for the measuring, modeling, managing, and mining of multiple forms of big brain data. Brain informatics techniques for the analysis of the data will help achieve a better understanding of human thought, memory, learning, decision-making, emotion, consciousness, and social behaviors. These methods and related studies will also assist in building brain-inspired intelligence, brain-inspired computing, and human-level wisdom-computing paradigms and technologies, thereby improving the treatment efficacy of mental health and brain disorders.

BI 2017 provided a broad forum for academics, professionals, and industry representatives to exchange their ideas, findings, and strategies in utilizing the powers of the mammalian brain, especially human brains and man-made networks to create a better world. In the 2017 version of the Brain Informatics conference, we argued that brain research is a grand challenge to all countries and various scientific communities. Its potential impact not only will help us to understand who we are, and provide us with a better life, but will also enable a paradigm shift in the new intelligence era. Hence, future brain research needs joint efforts and collaboration from different countries worldwide. It also calls for interdisciplinary studies to investigate the brain from various perspectives.

Therefore, the theme of BI 2017 was “Informatics Perspective of Investigation on the Brain and Mind.”

BI 2017 involved an inspiring cadre of world leaders in brain informatics research, including keynote speakers Alan Evans, James McGill Professor at McGill University, Canada, Tom Mitchell, E. Fredkin University Professor at Carnegie Mellon University, USA, and feature speakers Yanchao Bi, Professor at Beijing Normal University, China, Adam R. Ferguson, Associate Professor at University of California, San Francisco, USA, Bin Hu, Professor at Lanzhou University, China, Mike Hawrylycz, Investigator at Allen institute for Brain Science, USA, and Dinggang Shen, Professor at University of North Carolina at Chapel Hill, USA. BI 2017 also included a panel discussion among the leaders of brain informatics research worldwide.

Here we would like to express our gratitude to all members of the Conference Committee for their instrumental and unwavering support. BI 2017 had a very exciting program with a number of features, ranging from keynote talks to technical sessions, workshops/special sessions, and panel discussion. This would not have been possible without the generous dedication of the Program Committee members in reviewing the conference papers and abstracts, the BI 2017 workshop and special session chairs and organizers, and our keynote and feature speakers in giving outstanding talks at the conference. BI 2017 could not have taken place without the great team effort of the local Organizing Committee and generous support from our sponsors. We would especially like to express our sincere appreciation to our kind sponsors, including the Beijing Advanced Innovation Center for Future Internet Technology/BJUT (<http://bjfnc.bjut.edu.cn>), the Faculty of Information Technology/BJUT (<http://xxxb.bjut.edu.cn>), the Research Center for Brain-inspired Intelligence, Institute of Automation, Chinese Academy of Sciences (<http://bii.ia.ac.cn>), the Web Intelligence Consortium (<http://wi-consortium.org>), the Chinese Society for Cognitive Science (<http://www.cogsci.org.cn>), the Chinese Association for Artificial Intelligence (<http://caai.cn>), the International Neural Network Society (<https://www.inns.org>), the IEEE Computational

Intelligence Society (<http://cis.ieee.org>), the Allen Institute for Brain Science (<https://alleninstitute.org>), Springer LNCS/LNAI (<http://www.springer.com/gp/computer-science/lncs>), PsyTech Electronic Technology Co., Ltd. (<http://www.psytech.com.cn>), Beijing 7Invensun Technology Co., Ltd. (<https://www.7invensun.com>), John Wiley & Sons, Inc. (<http://www.wiley.com>), and Synced Technology Inc. (<https://syncedreview.com>).

Special thanks go to the Steering Committee co-chairs, Ning Zhong and Hanchuan Peng, for their help in organizing and promoting BI 2017. We also thank Juzhen Dong, Yang Yang, Jiajin Huang, Tielin Zhang, and Liyuan Zhang for their assistance with the CyberChair submission system and local affairs. We are grateful to Springer's *Lecture Notes in Computer Science* (LNCS/LNAI) team for their support. We thank Springer for their help in coordinating the publication of this special volume in an emerging and interdisciplinary research field.

Objects Categorization on fMRI Data: Evidences for Feature-Map Representation of Objects in Human Brain	107
<i>Sutao Song, Jiakai Zhang, and Yuehua Tong</i>	

Gender Role Differences of Female College Students in Facial Expression Recognition: Evidence from N170 and VPP	116
<i>Sutao Song, Jieyin Feng, Meiyun Wu, Beixi Tang, and Gongxiang Chen</i>	

Brain Big Data Analytics, Curation and Management

Overview of Acquisition Protocol in EEG Based Recognition System	129
<i>Hui-Yen Yap, Yun-Huoy Choo, and Wee-How Khoh</i>	
A Study on Automatic Sleep Stage Classification Based on Clustering Algorithm	139
<i>Xuexiao Shao, Bin Hu, and Xiangwei Zheng</i>	
Speaker Verification Method Based on Two-Layer GMM-UBM Model in the Complex Environment	149
<i>Qiang He, Zhijiang Wan, Haiyan Zhou, Jie Yang, and Ning Zhong</i>	
Emotion Recognition from EEG Using Rhythm Synchronization Patterns with Joint Time-Frequency-Space Correlation	159
<i>Hongzhi Kuai, Hongxia Xu, and Jianzhao Yan</i>	

Informatics Paradigms for Brain and Mental Health

Patients with Major Depressive Disorder Alters Dorsal Medial Prefrontal Cortex Response to Anticipation with Different Saliences	171
<i>Bin Zhang and Jijun Wang</i>	
Abnormal Brain Activity in ADHD: A Study of Resting-State fMRI	181
<i>Chao Tang, Yuqing Wei, Jiajia Zhao, Xin Zhang, and Jingxin Nie</i>	
Wearable EEG-Based Real-Time System for Depression Monitoring	190
<i>Shengjie Zhao, Qinglin Zhao, Xiaowei Zhang, Hong Peng, Zhijun Yao, Jian Shen, Yuan Yao, Hua Jiang, and Bin Hu</i>	
Group Guided Sparse Group Lasso Multi-task Learning for Cognitive Performance Prediction of Alzheimer's Disease	202
<i>Xiaoli Liu, Peng Cao, Jinzhu yang, Dazhe Zhao, and Osmar Zaiane</i>	
A Novel Deep Learning Based Multi-class Classification Method for Alzheimer's Disease Detection Using Brain MRI Data	213
<i>Jyoti Islam and Yanqing Zhang</i>	
A Quantitative Analysis Method for Objectively Assessing the Depression Mood Status Based on Portable EEG and Self-rating Scale	223
<i>Zhijiang Wan, Qiang He, Haiyan Zhou, Jie Yang, Jianzhao Yan, and Ning Zhong</i>	

Workshop on Affective, Psychological and Physiological Computing (APPC 2017)

Social Events Forecasting in Microblogging	235
<i>Yang Zhou, Chuxue Zhang, Xiaoqian Liu, Jingying Wang, Yuanbo Gao, Shuotian Bai, and Tingshao Zhu</i>	
Study on Depression Classification Based on Electroencephalography Data Collected by Wearable Devices	244
<i>Hanshu Cai, Yanhao Zhang, Xiaocong Sha, and Bin Hu</i>	
Corticospinal Tract Alteration is Associated with Motor Performance in Subacute Basal Ganglia Stroke	254
<i>Jing Wang, Ziyu Meng, Zengai Chen, and Yao Li</i>	
Detecting Depression in Speech Under Different Speaking Styles and Emotional Valences.	261
<i>Zhenyu Liu, Bin Hu, Xiaoyu Li, Fei Liu, Gang Wang, and Jing Yang</i>	
Scientific Advances on Consciousness	272
<i>Yinsheng Zhang</i>	

Workshop on Big Data and Visualization for Brainsmatics (BDVB 2017)

BECA: A Software Tool for Integrated Visualization of Human Brain Data . . .	285
<i>Huang Li, Shiaofer Fang, Bob Zigon, Olaf Sporns, Andrew J. Saykin, Joaquín Goñi, and Li Shen</i>	

Workshop on Semantic Technology for eHealth (STeH 2017)

Knowledge Graphs in the Quality Use of Antidepressants: A Perspective from Clinical Research Applications	295
<i>Weijing Tang, Yu Yang, Zhisheng Huang, and Xiaoli Hua</i>	
Using Knowledge Graph for Analysis of Neglected Influencing Factors of Statin-Induced Myopathy	304
<i>Yu Yang, Zhisheng Huang, Yong Han, Xiaoli Hua, and Weijing Tang</i>	

Workshop on Mesoscopic Brainformatics (MBAI 2017)

Mesoscopic Brainformatics	315
<i>Dezhong Yao</i>	

Special Session on Brain Informatics in Neurogenetics (BIN 2017)

The Development and Application of Biochemical Analysis of Saliva
in the Assessment of the Activity of Nervous System 327
Chen Li, Pan Gu, Kangwei Shen, and Xuejun Kang
