Preface

We are delighted to introduce the proceedings of the 10th edition of the 2017 European Alliance for Innovation (EAI) International Wireless Internet Conference (WiCON 2017). Over the years, WiCON has established itself as a research venue where key results in the areas of wireless Internet have appeared. WiCON 2017 continued to serve as a premier international conference to discuss novel research results related to the emerging wireless Internet, wireless communications, and networks.

The technical program of WiCON 2017 consisted of 42 full papers in six tracks to reflect the recent development and advancement in the area. The conference tracks were: Track 1 – Physical Layer (PHY) Track; Track 2 – Medium Access Control (MAC) Track; Track 3 – Network Track; Track 4 – Security Track; Track 5 – Cloud and Big Data Track; and Track 6 – Emerging Internet-of-Things (IoT) Track. We are delighted that this year's event maintained the tradition of high-quality contributions. Aside from the high-quality technical paper presentations, the technical program also featured two keynote speeches, which were given by Dr. Nei Kato from Tohoku University, Japan, and Dr. Ying-Chang Liang from University of Electronic Science and Technology of China. We were delighted to have these two internationally well-known researchers join us to share their vision on future research and development of wireless Internet technologies.

Coordination with the steering chairs, Imrich Chlamtac, Hsiao-Hwa Chen, and Jun Zheng was essential for the success of the conference. We sincerely appreciate their constant support and guidance. It was also a great pleasure to work with such an excellent Organizing Committee team who worked hard in organizing and supporting the conference. In particular, we thank the Technical Program Committee, led by our TPC co-chairs, Dr. Cheng Li and Dr. Shiwen Mao, who completed the peer-review process of technical papers and compiled a high-quality technical program. We are also grateful to the conference sponsor, Tianjin Chengjian University, the local arrangement chairs, Dr. Kun Hao and Dr. Yan Zhang, and the EAI conference managers, Lenka Bilska, for their support and all the authors who submitted their papers to the WiCON 2017 conference.

We strongly believe that WiCON provides a good forum for all researchers, developers, and practitioners to discuss all scientific and technological aspects that are relevant to wireless Internet. We also expect that future WiCON conferences will continue to be as successful and stimulating, as indicated by the contributions presented in this volume.
