Preface

The Third International Computer Science Symposium in Russia (CSR-2008) was held during June 7–12, 2008 in Moscow, Russia, hosted by Dorodnicyn Computing Centre of Russian Academy of Sciences, Institute for System Programming of Russian Academy of Sciences, Moscow State University, Moscow Institute of Open Education, and Institute of New Technologies. It was the third event in the series of regular international meetings following CSR-2006 in St. Petersburg and CSR-2007 in Ekaterinburg.

The symposium was composed of two tracks: Theory and Applications/Technology. The opening lecture was given by Avi Wigderson and eight other invited plenary lectures were given by Eric Allender, Zurab Khasidashvili, Leonid Levin, Pavel Pudlák, Florin Spanachi, Limsoon Wong, Yuri Zhuravlev and Konstantin Rudakov, and Uri Zwick.

This volume contains the accepted papers of both tracks and also some of the abstracts of the invited speakers. The scope of the proposed topics for the symposium was quite broad and covered basically all areas of computer science and its applications. We received 103 papers in total. The Program Committee of the Theory Track selected 27 papers out of 62 submissions. The Program Committee of the Applications/Technology Track selected 6 papers out of 41 submissions.

Yandex provided Best Paper Awards; the recepients of these awards were selected by the Program Committee:

- Marius Zimand, "Two Sources Are Better Than One for Increasing the Kolmogorov Complexity of Infinite Sequences" Best Paper Award for the Theory Track
- Laura Kovács, "Invariant Generation for P-solvable Loops with Assignments"
 Best Paper Award for the Application/Technology Track
- Vladimir Podolskii, "A Uniform Lower Bound on Weights of Perceptrons"
 Best Student Paper Award

The symposium featured two special sessions, "Andrei Muchnik. In Memoriam" and "Teaching Computer Science," and one pre-conference workshop ACC 2008 (Russian-Indian Workshop on Algebra, Combinatorics and Complexity) organized by Meena Mahajan and Mikhail Volkov.

The reviewing process was organized using the EasyChair conference system, thanks to Andrei Voronkov.

We are grateful to our sponsors:

- Russian Foundation for Basic Research
- NIX Computer Company (hardware and software selling, system integration)
- Institute of New Technologies (INT, Russian leader of ICT in school education)

VI Preface

- Yandex (the largest Russian Internet portal providing key Web services)
- Microsoft Russia

We also thank a group of young Moscow computer scientists, headed by Yuri Pritykin, who significantly helped with local organizational issues.

Table of Contents

Opening Lecture	
Randomness – A Computational Complexity Perspective	1
Invited Papers	
Cracks in the Defenses: Scouting Out Approaches on Circuit Lower Bounds	3
On Formal Equivalence Verification of Hardware	11
Twelve Problems in Proof Complexity	13
Manifestation and Exploitation of Invariants in Bioinformatics $Limsoon\ Wong$	28
Simple Stochastic Games, Mean Payoff Games, Parity Games $Uri\ Zwick$	29
Theory Track	
Topological Semantics of Justification Logic	30
A Logspace Algorithm for Partial 2-Tree Canonization	40
A Triple Correspondence in Canonical Calculi: Strong Cut-Elimination, Coherence, and Non-deterministic Semantics	52
Computing Longest Common Substrings Via Suffix Arrays	64
Logic and Rational Languages of Words Indexed by Linear Orderings Nicolas Bedon, Alexis Bès, Olivier Carton, and Chloé Rispal	76
Complexity of the Bollobás-Riordan Polynomial: Exceptional Points and Uniform Reductions	86

A Complete Characterization of Nash-Solvability of Bimatrix Games in Terms of the Exclusion of Certain 2 × 2 Subgames	99
Synchronization of Grammars	110
Lower Bounds for Depth-2 and Depth-3 Boolean Circuits with Arbitrary Gates	122
A Semantic Proof of Polytime Soundness of Light Affine Logic	134
On Subword Complexity of Morphic Sequences	146
Comparing Universal Covers in Polynomial Time	158
S4LP and Local Realizability	168
On the Expressive Power of Permanents and Perfect Matchings of Matrices of Bounded Pathwidth/Cliquewidth (Extended Abstract)	180
The Most General Conservation Law for a Cellular Automaton	194
Lower Bounds on Frequency Estimation of Data Streams (Extended Abstract)	204
From Invariants to Canonization in Parallel	216
Self-referentiality of Justified Knowledge	228
On the Complexity of Membership and Counting in Height-Deterministic Pushdown Automata	240
Public Key Encryption and Encryption Emulation Attacks	252
A Uniform Lower Bound on Weights of Perceptrons	261
