Preface

This book contains a selection of the best papers from WEBIST 2009 (the 5th International Conference on Web Information Systems and Technologies), held in Lisbon, Portugal, in 2009, organized by the Institute for Systems and Technologies of Information, Control and Communication (INSTICC), in collaboration with ACM SIGMIS and co-sponsored by the Workflow Management Coalition (WFMC).

The purpose of the WEBIST series of conferences is to bring together researchers, engineers and practitioners interested in the technological advances and business applications of Web-based information systems. The conference has four main tracks, covering different aspects of Web information systems, including Internet Technology, Web Interfaces and Applications, Society, e-Communities, e-Business and e-Government.

WEBIST 2009 received 203 paper submissions from 47 countries on all continents. A double-blind review process was enforced, with the help of more than 150 experts from the International Program Committee; each of them specialized in one of the main conference topic areas. After reviewing, 28 papers were selected to be published and presented as full papers and 44 additional papers, describing work-in-progress, published and presented as short papers. Furthermore, 35 papers were presented as posters. The full-paper acceptance ratio was 13%, and the total oral paper acceptance ratio was 36%.

Therefore, we hope that you find the papers included in this book interesting, and we trust they may represent a helpful reference for all those who need to address any of the research areas mentioned above.
