Preface

This book originated from the third SUEMA (Supervised and Unsupervised Ensemble Methods and their Applications) workshop held in Barcelona, Spain in September 2010. It continues and follows the tradition of the previous SUEMA workshops – small international events. These events attract researchers interested in ensemble methods – groups of learning algorithms that solve a problem at hand by means of combining or fusing predictions made by members of a group – and their real-world applications. The emphasis on practical applications plays no small part in every SUEMA workshop as we hold the opinion that no theory is vital without demonstrating its practical value.

In 2010 we observed significant changes in both workshop audience and scope of the accepted papers. The audience became younger and different topics, such as Error-Correcting Output Codes and Bayesian Networks, emerged that were not common at the previous workshops. These new trends are good signs for us as workshop organizers as they indicate that young researchers consider ensemble methods as a promising R&D avenue, and the shift in scope means that SUEMA workshops preserved the ability to timely react on changes.

This book is composed of individual chapters written by independent groups of authors. As such, the book chapters can be read without following any pre-defined order. However, we tried to group chapters similar in content together to facilitate reading. The book serves to educate both a seasoned professional and a novice in theory and practice of clustering and classifier ensembles. Many algorithms in the book are accompanied by pseudo code intended to facilitate their adoption and reproduction.

We wish you, our readers, fruitful reading!

Acknowledgements

We would like to thank the ECML/PKDD'2010 organizers for the opportunity to hold our workshop at the world-class Machine Learning and Data Mining conference in Barcelona. We would like to thank all authors for their valuable contribution to this book as this book would clearly be impossible without your excellent work. We also deeply appreciate the financial support of PASCAL 2 Network of Excellence in organizing SUEMA'2010.

Prof. Janusz Kacprzyk and Dr. Thomas Ditzinger from Springer-Verlag deserved our special acknowledgment for warm welcome to our book and their support and a great deal of encouragement. Finally, we thank all other people in Springer who participated in the publication process.

Contents

1	Facial Action Unit Recognition Using Filtered Local Binary Pattern Features with Bootstrapped and Weighted ECOC Classifiers	1
	<i>Raymond S. Smith, Terry Windeatt</i>	
1.1	Introduction	1
1.2	Theoretical Background	5
1.2.1	ECOC Weighted Decoding	5
1.2.2	Platt Scaling	6
1.2.3	Local Binary Patterns	7
1.2.4	Fast Correlation-Based Filtering	8
1.2.5	Principal Components Analysis	9
1.3	Algorithms	10
1.4	Experimental Evaluation	10
1.4.1	Classifier Accuracy	13
1.4.2	The Effect of Platt Scaling	14
1.4.3	A Bias/Variance Analysis	15
1.5	Conclusion	16
1.6	Code Listings	17
