Preface

Over the last few decades, energy minimization methods have become an established paradigm to resolve a variety of challenges in the fields of computer vision and pattern recognition. While traditional approaches to computer vision were often based on a heuristic sequence of processing steps and merely allowed a very limited theoretical understanding of the respective methods, most state-of-the-art methods are nowadays based on the concept of computing solutions to a given problem by minimizing the respective energies.

This volume contains the papers presented at the 8th International Conference on Energy Minimization Methods in Computer Vision and Pattern Recognition (EMMCVPR 2011), held at the Radisson Royal Hotel in Saint Petersburg, July 25–27, 2011. These papers demonstrate that energy minimization methods have become a mature field of research spanning a broad range of areas from discrete graph theoretic approaches and Markov random fields to variational methods and partial differential equations. Application areas include image segmentation and tracking, shape optimization and registration, inpainting and image denoising, color and texture modeling, statistics and learning. Overall, we received 52 high-quality submissions. Based on the reviewer recommendations, after double-blind review process 30 papers were selected for publication, 16 as oral and 14 as poster presentations.

Both oral and poster papers were attributed the same number of pages in the conference proceedings. Furthermore, we were delighted that three leading experts from the fields of computer vision and energy minimization, namely, Andrew Blake (Microsoft Research), Emmanuel Candes (Stanford University), Alan Yuille (UCLA), and Vladimir Kolmogorov (IST Austria), agreed to further enrich the conference with inspiring keynote lectures.

We would like to express our gratitude to those who made this event possible and contributed to its success. In particular, our Program Committee of top international experts in the field provided excellent reviews. A major donation from Microsoft Research and a financial contribution from Yandex covered a significant part of the conference expenses. We are grateful to Andrew Delong, Lena Gorelick, and a grant from the University of Western Ontario for covering the conference's printing needs. Anna Medvedeva provided very helpful local administrative support. It is our belief that this conference will help to advance the field of energy minimization methods and to further establish the mathematical foundations of computer vision.

Table of Contents

Discrete Optimization

A Distributed Mincut/Maxflow Algorithm Combining Path Augmentation and Push-Relabel	1
<i>Alexander Shekhovtsov and Václav Hlaváč</i>	
Minimizing Count-Based High Order Terms in Markov Random Fields	17
<i>Thomas Schoenemann</i>	
Globally Optimal Image Partitioning by Multicuts	31
<i>Jörg Hendrik Kappes, Markus Speth, Björn Andres, Gerhard Reinelt, and Christoph Schnörr</i>	
A Fast Solver for Truncated-Convex Priors: Quantized-Convex Split Moves	45
<i>Anna Jezierska, Hugues Talbot, Olga Veksler, and Daniel Wesierski</i>	

Continuous Optimization

Temporally Consistent Gradient Domain Video Editing	59
<i>Gabriele Facciolo, Rida Sadek, Aurélie Bugeau, and Vicent Caselles</i>	
Texture Segmentation via Non-local Non-parametric Active Contours	74
<i>Miyoun Jung, Gabriel Peyré, and Laurent D. Cohen</i>	
Evaluation of a First-Order Primal-Dual Algorithm for MRF Energy Minimization	89
<i>Stefan Schmidt, Bogdan Savchynskyy, Jörg Hendrik Kappes, and Christoph Schnörr</i>	
Global Relabeling for Continuous Optimization in Binary Image Segmentation	104
<i>Markus Unger, Thomas Pock, and Horst Bischof</i>	
Stop Condition for Subgradient Minimization in Dual Relaxed (max,+) Problem	118
<i>Michail Schlesinger, Evgeniy Vodolazskiy, and Nikolai Lopatka</i>	

Segmentation

Optimality Bounds for a Variational Relaxation of the Image Partitioning Problem	132
<i>Jan Lellmann, Frank Lenzen, and Christoph Schnörr</i>	

VIII Table of Contents

Interactive Segmentation with Super-Labels	147
<i>Andrew Delong, Lena Gorelick, Frank R. Schmidt, Olga Veksler, and Yuri Boykov</i>	
Curvature Regularity for Multi-label Problems - Standard and Customized Linear Programming	163
<i>Thomas Schoenemann, Yubin Kuang, and Fredrik Kahl</i>	
Space-Varying Color Distributions for Interactive Multiregion Segmentation: Discrete versus Continuous Approaches	177
<i>Claudia Nieuwenhuis, Eno Töppe, and Daniel Cremers</i>	
Detachable Object Detection with Efficient Model Selection	191
<i>Alper Ayvaci and Stefano Soatto</i>	
Curvature Regularization for Curves and Surfaces in a Global Optimization Framework.....	205
<i>Petter Strandmark and Fredrik Kahl</i>	
SlimCuts: GraphCuts for High Resolution Images Using Graph Reduction.....	219
<i>Björn Scheuermann and Bodo Rosenhahn</i>	
Discrete Optimization of the Multiphase Piecewise Constant Mumford-Shah Functional	233
<i>Noha El-Zehiry and Leo Grady</i>	
Image Segmentation with a Shape Prior Based on Simplified Skeleton	247
<i>Boris Yangel and Dmitry Vetrov</i>	
High Resolution Segmentation of Neuronal Tissues from Low Depth-Resolution EM Imagery.....	261
<i>Daniel Glasner, Tao Hu, Juan Nunez-Iglesias, Lou Scheffer, Shan Xu, Harald Hess, Richard Fetter, Dmitri Chklovskii, and Ronen Basri</i>	
Motion and Video	
Optical Flow Guided TV-L ¹ Video Interpolation and Restoration	273
<i>Manuel Werlberger, Thomas Pock, Markus Unger, and Horst Bischof</i>	
Data-Driven Importance Distributions for Articulated Tracking	287
<i>Søren Hauberg and Kim Steenstrup Pedersen</i>	
Robust Trajectory-Space TV-L1 Optical Flow for Non-rigid Sequences	300
<i>Ravi Garg, Anastasios Roussos, and Lourdes Agapito</i>	

Intermediate Flow Field Filtering in Energy Based Optic Flow Computations	315
<i>Laurent Hoeltgen, Simon Setzer, and Michael Breuß</i>	
TV- L^1 Optical Flow for Vector Valued Images	329
<i>Lars Lau Rakêt, Lars Roholm, Mads Nielsen, and François Lauze</i>	
Using the Higher Order Singular Value Decomposition for Video Denoising	344
<i>Ajit Rajwade, Anand Rangarajan, and Arunava Banerjee</i>	
Learning	
Optimization of Robust Loss Functions for Weakly-Labeled Image Taxonomies: An ImageNet Case Study	355
<i>Julian J. McAuley, Arnau Ramisa, and Tibério S. Caetano</i>	
Multiple-Instance Learning with Structured Bag Models	369
<i>Jonathan Warrell and Philip H.S. Torr</i>	
Branch and Bound Strategies for Non-maximal Suppression in Object Detection	385
<i>Matthew B. Blaschko</i>	
Shape Analysis	
Metrics, Connections, and Correspondence: The Setting for Groupwise Shape Analysis	399
<i>Carole Twining, Stephen Marsland, and Chris Taylor</i>	
The Complex Wave Representation of Distance Transforms	413
<i>Karthik S. Gurumoorthy, Anand Rangarajan, and Arunava Banerjee</i>	
Author Index	429
