Preface

We are pleased to present the proceedings of the 14th International Conference on Discovery Science (DS 2011), held in Espoo, Finland, during October 5-7, 2011. DS 2011 provided an open forum for intensive discussions and exchange of new ideas among researchers working in the area of discovery science. The scope of the conference includes the development and analysis of methods for automatic scientific knowledge discovery, machine learning, intelligent data analysis, theory of learning, as well as their application to knowledge discovery. DS 2011 was co-located with the 22nd International Conference on Algorithmic Learning Theory (ALT 2011). The proceedings of ALT 2011 appeared as companion volume number 6925 in the Springer LNCS series. This year we had a decennial celebration of the fruitful co-location of the ALT and DS conference series, which allowed us to cover the whole range from theoretical explorations to practical applications.

We were honored to have a strong program. We received 56 submissions from authors coming from 22 countries. The submissions were reviewed by three members of the Program Committee; the Program Chairs evaluated the review reports and decided to accept 24 papers based on the merits of originality, technical quality, and relevance to the field of discovery science. The overall acceptance rate was 43%. We were delighted to have five prestigious invited talks by six speakers. Ming Li from the University of Waterloo in Canada presented "Information Distance and Its Extensions". Eyke Hüllermeier from Philipps-Universität Marburg in Germany together with Johannes Fürnkranz from Technische Universität Darmstadt in Germany presented a joint invited talk on the latest research concerning "Learning from Label Preferences". Yoshua Bengio from the University of Montreal in Canada was the joint invited speaker of ALT 2011 and DS 2011, and he presented "On the Expressive Power of Deep Architectures". Jorma Rissanen from Helsinki Institute for Information Technology in Finland presented an invited talk on "Optimal Estimation". Peter Auer from the University of Leoben in Austria presented "Models for Autonomously Motivated Exploration in Reinforcement Learning". Tutorials were given on the topic of preference learning by Eyke Hüllermeier and Johannes Fürnkranz jointly and on the topic of bandits by Sébastien Bubeck from Princeton University in USA.

We wish to express our gratitude to all authors of submitted papers, the Program Committee members and the additional reviewers for their efforts in evaluating the submitted papers, as well as the invited speakers and tutorial presenters. We thank the members of the DS Steering Committee, especially its Chair, Einoshin Suzuki, who were very helpful in providing continual support necessary for the continuity of the DS series. We thank the ALT editors Jyrki Kivinen, Csaba Szepesvári, Esko Ukkonen, and Thomas Zeugmann for the fruitful coordination of the co-located ALT and DS conferences. We also thank

VI Preface

the Local Organizing Committee, chaired by Olli Simula, for making the practical arrangements concerning the ALT and DS conferences. We acknowledge the support from our hosting organizations Aalto University, University of Helsinki, Algodan - Centre of Excellence for Algorithmic Data Analysis Research, and Helsinki Institute for Information Technology in Finland. Finally, we thank the Artificial Intelligence journal for the financial support.

Table of Contents

On the Expressive Power of Deep Architectures	1
Learning from Label Preferences	2
Information Distance and Its Extensions	18
Models for Autonomously Motivated Exploration in Reinforcement Learning	29
Optimal Estimation	30
Monotone Instance Ranking with MIRA	31
MOA-TweetReader: Real-Time Analysis in Twitter Streaming Data Albert Bifet, Geoffrey Holmes, and Bernhard Pfahringer	46
Application of Semantic Kernels to Literature-Based Gene Function Annotation	61
"Tell Me More": Finding Related Items from User Provided Feedback Jeroen De Knijf, Anthony Liekens, and Bart Goethals	76
MEI: Mutual Enhanced Infinite Generative Model for Simultaneous Community and Topic Detection	91
A Methodology for Mining Document-Enriched Heterogeneous Information Networks	107
Multiple Hypothesis Testing in Pattern Discovery	122
A Parameter-Free Method for Discovering Generalized Clusters in a Network	135
Hiroshi Hirai, Bin-Hui Chou, and Einoshin Suzuki	

Voter Model	150
Using Ontologies in Semantic Data Mining with SEGS and g-SEGS Nada Lavrač, Anže Vavpetič, Larisa Soldatova, Igor Trajkovski, and	165
Petra Kralj Novak	
Mining Classification Rules without Support: an Anti-monotone Property of Jaccard Measure	179
Bootstrapping Parameter Estimation in Dynamic Systems	194
Network Effects on Tweeting	209
Context-Aware Personal Route Recognition	221
Scalable Detection of Frequent Substrings by Grammar-Based Compression	236
A Statistical Model for Topically Segmented Documents	247
Predicting Structured Outputs k -Nearest Neighbours Method $Mitja\ Pugelj\ and\ Sa\~so\ D\~zeroski$	262
The Augmented Itemset Tree: A Data Structure for Online Maximum Frequent Pattern Mining Jana Schmidt and Stefan Kramer	277
Word Clouds for Efficient Document Labeling	292
Global and Local Spatial Autocorrelation in Predictive Clustering	205
Trees	307
Rule Stacking: An Approach for Compressing an Ensemble of Rule Sets into a Single Classifier	323
Graph Clustering Based on Optimization of a Macroscopic Structure of Clusters	335

Table of Contents	XIII	
Modeling the Temperature of Hot Rolled Steel Plate with Semi-supervised Learning Methods	. 351	
Controlled Permutations for Testing Adaptive Classifiers	. 365	
Author Index	. 381
