Preface

This volume contains the proceedings of the first international conference on “The Impact of Virtual, Remote and Real Labs in Logistics” 2012 (ImViReLL 2012). The conference took place in combination with the “International Conference of Dynamics in Logistics” 2012 (LDIC 2012) in Bremen, Germany.

The importance of logistics labs in supporting the transition from fundamental to applied research is undisputed. Lately, the Internet (of Things) has changed the scope of these labs. Firstly, the Internet of Things is addressed as a research topic in these labs. Secondly, the Internet supports virtualization of testing infrastructures and remote access to logistics labs for increased collaboration between researchers across different research disciplines and locations. The goal of the conference was to focus on lab-based research and education, evaluate their impact in research and education and investigate specific demands, opportunities and challenges.

The idea to have a conference focusing on the role of logistics labs and their relevance for research and education has largely been influenced by corresponding research on labs in other disciplines, such as chemistry, electronics, engineering and automation. Collaborations, such as the Virtual and Remote Labs Community (www.vrlcom.com), lab2go (www.lab2go.net), Global Online Laboratory Consortium (online-lab.org) as well as conferences (e.g., Remote Engineering and Virtual Instrumentation – REV) and journals, such as the *International Journal of Online Engineering – iJOE*, have provided different platforms to exchange ideas and research results about lab-based research. However, logistics labs have spread during the last years without an established information exchange community.

The ImViReLL conference tries to fill this gap. On the one hand, it provides a platform for information exchange between lab researchers in logistics. It thus supports and complements the work of the Global RF Lab Alliance (www.grlfa.org), RFID in Europe and the *International Journal of RF Technologies*, which are focused on radio-frequency-based research and applications in logistics. On the other hand, ImViReLL invites researchers from other disciplines to support interdisciplinary research and information exchange. This approach is not without problems, however. Some reviews, for example, have been declined by scientific committee members from other disciplines if papers were too domain-specific to logistics. It will take further efforts to differentiate domain-specific from domain-independent topics.

ImViReLL 2012 provided a venue for researchers from academia and industry interested in future-oriented logistics labs as a nucleus for innovation. The conference covered research in logistics from a wide range of fields, for instance, engineering, computer science, distributed education and collaborative research.

The conference addressed numerous specific areas of interest, such as lab-based technology and feasibility studies, pilots and demonstrators, lab-centric specifics of logistic labs, virtual and remote research environments and communities, the role of RFID, sensors, actuators, robots, intelligent material handling, and (de-) centralized data processing in logistic labs, architecture developments for multiple (networked) demonstrators, social networking technology in research and educational implications. This diversity of topics is reflected in the conference papers.

We would like to thank all authors, Scientific Committee members and reviewers for their work. Additionally, we would like to thank RFID in Europe, Concord, LogDynamics, the Global RF Lab Alliance and *RFID Journal* for their helpful support.

March 2012

Organization

Conference Chairs

Dieter Uckelmann	LogDynamics Lab, University of Bremen, Germany
Bernd Scholz-Reiter	University of Bremen, Germany
Ingrid Rügge	University of Bremen, Germany
Bonghee Hong	Institute of Logistics Information Technology (LIT), Pusan National University, Korea
Antonio Rizzi	RFid Lab, University of Parma, Italy

Scientific Committee and Reviewers

Gisele Bennett	Electro-Optical Systems Laboratory, Georgia Tech Research Institute, USA
Shing-Chi Cheung	RFID Center, Hong Kong University of Science and Technology, China
Volker Coors	HFT Stuttgart, Germany
Farideh Ganji	BIBA GmbH, Germany
Javier García-Zubia	Deusto Institute of Technology, Spain
Christian Gorltd	BIBA GmbH, Germany
Willibald Günthner	TU Munich, Germany
Bill C. Hardgrave	Auburn University, Bremen
Hamid Reza Karimi	University of Agder, Norway
Dietmar Kennepohl	Athabasca University, Canada
Michael Lawo	University of Bremen, Germany
Yu Liu, RFID Lab	Chinese Academy of Science (CASIA), Beijing, China
José Machado	University of Minho, Portugal
Thomas Makuschewitz	BIBA GmbH, Germany
Florian Michahelles	Auto-ID Lab, ETH Zurich, Switzerland
Kaj Nummila	VTT Technical Research Center of Finland
Justin Patton	University of Arkansas RFID Research Center, USA
Katerina Pramataris	ELTRUN Laboratory (AUEB), Athens University of Economics and Business, Greece

VIII Organization

Michael Schenk	Fraunhofer-Institut für Fabrikbetrieb und -automatisierung IFF, Magdeburg, Germany
Samuel Bloch da Silva	Flextronics Institute of Technology – RFID CoE, Brazil
Klaus-Dieter Thoben	University of Bremen, Germany
Keith Ulrich	DHL Solutions & Innovations, Germany
Markus Witte	Lufthansa Cargo AG, Germany

Local Organization

Aleksandra Himstedt	University of Bremen, Germany
Irena Weinhold	University of Bremen, Germany

Table of Contents

Fundamentals and Historic Background of Lab-Based Research in Logistics

The Role of Logistics Labs in Research and Higher Education	1
<i>Dieter Uckelmann</i>	

Infrastructure and Design of Virtual, Remote and Real Labs

A Concept for a Flexible and Scalable Infrastructure for Remote Laboratories: Robustness in Remote Engineering Laboratories	13
<i>Karsten Henke, Steffen Ostendorff, and Heinz-Dietrich Wuttke</i>	

Virtual Logistics Lab: A Framework for Rapid Prototyping and Remote Experimentation	25
<i>Carl Franz, Tobias Fritz, André Kreis, Maurice Meyer, Maik Müller, Andreas Nawroth, Christoph Schröder, Afshad Syed-Ahmed, and Igor Zhuchenko</i>	

A Living Lab for Internet of Things Vending Machines	35
<i>Sauro Vicini, Alberto Sanna, and Sara Bellini</i>	

Educational Implications of Virtual, Remote and Real Labs

Integrating Remote Laboratories in Post-secondary Science Education	44
<i>Dietmar Karl Kennepohl, Jit Baran, and Ron Currie</i>	

Enterprise Portal Technology in Computer-Supported Collaborative Learning	54
<i>Juha Ensio Kareinen and Jyri Pötry</i>	

Web-Assisted Laboratory for Control Education: Remote and Virtual Environments	62
<i>Celina P. Leão, Filomena Soares, Helena Rodrigues, Eurico Seabra, José Machado, Pedro Farinha, and Sandra Costa</i>	

Test-Beds and Demonstrators

Developing Future Logistics Applications with the Saxony-Anhalt Galileo Test Bed	73
<i>Klaus Richter and Olaf Poenicke</i>	
Prototyping in Research Domains: A Prototype for Autonomous Production Logistics	81
<i>Farideh Ganji, Marius Veigt, and Bernd Scholz-Reiter</i>	
Agent-Based Emulation of an Electric Overhead Monorail System Pilot Plant: Testing and Virtual Extension of an Existing Test Facility.....	90
<i>Willibald A. Günthner and Peter Tenerowicz-Wirth</i>	
Combining Machine-to-Machine Communications with Intelligent Objects in Logistics	102
<i>Javier Palafox-Albarran, Alexander Dannies, Bala Krishna Sanjeeva, Walter Lang, and Reiner Jedermann</i>	

Lab-Based Process Improvements in Logistics

Augmented Traceability with Internet of Things: A Demonstrator for Seafood Supply Chains	113
<i>Nicolas Pawvre, Jacques Madelaine, Jérôme Le Moulec, and Adrien Laurence</i>	
From TagID to eVIN – Structured Data Exchange Based on RFID	122
<i>Bernd Scholz-Reiter and Jeanette Mansfeld</i>	
How AutoID Processes Shape the Internet of Things: The OpenID-Center Development Process.....	134
<i>Benedikt Mättig, Martin Fiedler, Alexander Hille, and Björn Anderseck</i>	

Lab-Supported Product Developments

Using RFID in License Plates and Vignettes for Electronic Vehicle Identification: Structured Testing of Passive UHF Systems for Vehicle Identification	148
<i>Dennis Brandwein, Dieter Uckelmann, and Björn Beenken</i>	
The Internet of Drinks: Lab-Based Research for the Taste of It	156
<i>Marco Lewandowski, Kolja Schmidt, Christoph Kielhorn, and Dieter Uckelmann</i>	

Author Index	167
