Preface

The papers in this volume were presented at a conference that was designed to map out historical study needs in one area of the history of computing, namely, software. The Paderborn conference was sponsored by the Heinz Nixdorf MuseumsForum and co-sponsored by the Charles Babbage Institute and the Heinz Nixdorf Institute of the University of Paderborn. The idea for the conference emerged from the consideration of a larger concept that was to prepare a new handbook on the history of computing. Believing that preparation of the handbook would encounter obstacles in some areas of computing that have not received adequate attention from historians, the originators of the idea of the handbook decided on a series of mapping conferences to try to overcome the obstacles, of which the Paderborn conference is the first. The organizers of the conference invited a group of historians, sociologists, and computer scientists to present papers and comments about a selected set of issues in the history of software. The organizing committee consisted of William Aspray (Computing Research Association, Washington, D.C.), Martin Campbell-Kelly (University of Warwick, U.K.), Ulf Hashagen (Heinz Nixdorf MuseumsForum, Paderborn), Reinhard Keil-Slawik (Heinz Nixdorf Institute, University of Paderborn), Michael S. Mahoney (Princeton University) and Arthur L. Norberg (Charles Babbage Institute, University of Minnesota).

The ambitious overall objective of this conference was to review our present understanding of the history of software and to establish an agenda for further research. The program of the conference was an attempt to explore the topic of the history of software in a new way. We neither intended nor expected the product to be a finished history of any of the topics included in the conference, nor did we want a continuation of previous efforts to describe histories of individual software artifacts. The conference presenters were asked not to attempt to provide finished histories for any of the areas of software history. Instead, speakers and commentators were asked to comment on the fundamental elements that make software what it is, and offer an exploration of our current understanding of software and its history. The organizers decided to address two different perspectives in the conference: the perspective of the computer scientists and the perspective of the historians and sociologists interested in the larger context of a development. Hence, computer scientists, entrepreneurs, historians, and sociologists met to discuss the

selected set of issues. Between speakers and commentators, we hoped to merge the two perspectives into one scheme for investigating the history of software.

We hope that the volume presented here is only the first step in a larger series of conferences and scholarly studies on the history of software. Many issues had to be left out, and the attempts to structure the field have to be regarded as immature. The dialogue started here, especially between historians and computer scientists, has to be continued. This dialogue will be by no means easy to conduct, because with software the object of historical study comes close to our personal life and experiences. It is, however, our dear hope that this dialogue will create for the reader as much of a challenging learning experience as it was for the historians and computer scientists attending this conference.

Acknowledgments

The way the book evolved also made great demands on everyone engaged in its production. We are especially indebted to Sandra Sewzyk (Heinz Nixdorf MuseumsForum), Andreas Brennecke (Heinz Nixdorf Institute, University of Paderborn) and Lars Klein (University of Paderborn), who coordinated the production of the book and eventually assumed responsibility for the layout of the text as a whole. Our gratitude also goes to Philip Bacon, who took care of correcting our non-native speakers' English. Finally, we would like to thank Ingeborg Mayer and Dr. Hans Wössner of Springer-Verlag. The extraordinary care and patience they all showed here have contributed to the overall quality of the book.

Table of Contents

- Introduction** 1
- Prologue: A Computer Pioneer’s Talk** 9
 - Pioneering Work in Software During the 50s in Central Europe 11
 - Friedrich L. Bauer
- Part 1: Software as Science** 23
 - Software as Science—Science as Software 25
 - Michael S. Mahoney
 - Commentary on Michael S. Mahoney 49
 - David Edge
 - Software as Science? Commentary on Michael S. Mahoney 55
 - Gerhard Goos
 - Discussion following “Software as Science” 61
 - Thomas Haigh
- Part 2: Software as Engineering** 63
 - Software as Engineering 65
 - James E. Tomayko
 - Commentary on James E. Tomayko 77
 - Albert Endres
 - Commentary on James E. Tomayko 83
 - Bruce E. Seely
 - Discussion following “Software as Engineering” 93
 - Mary Croarken
- Part 3: Software as Reliable Artefact** 95
 - A View from the Sonnenbichl:
On the Historical Sociology of Software and System Dependability 97
 - Donald MacKenzie
 - Commentary on Donald MacKenzie 123
 - Bernd Mahr
 - Dependability Then and Now: Commentary on Donald MacKenzie 127
 - Victoria Stavridou

Discussion following “Software as Reliable Artefact”	135
Mary Croarken and David Grier	
Part 4: Software as Labor Process	137
Software as Labor Process.....	139
Nathan Ensmenger and William Aspray	
Are Programmers Oppressed by Monopoly Capital, or Shall the Geeks Inherit the Earth? Commentary on Nathan Ensmenger & William Aspray	167
David A. Hounshell	
A Commentary on David A. Hounshell’s Commentary on “Software as Labor Process”	177
Nathan Ensmenger and William Aspray	
Discussion following “Software as Labor Process”	179
Mary Croarken	
Part 5: Software as Economic Activity	183
Software as an Economic Activity	185
Martin Campbell-Kelly	
Commentary on Martin Campbell-Kelly	203
Pierre-E. Mounier-Kuhn	
Commentary on Martin Campbell-Kelly	211
David C. Mowery	
A Note on Martin Campbell-Kelly’s “Software as an Economic Activity” and David Mowery’s “Commentary”	219
David A. Hounshell	
Discussion following “Software as an Economic Activity”	223
Thomas Haigh	
Part 6: Museums and Exhibitions	225
Collecting Software: Preserving Information in an Object-Centred Culture	227
Doron Swade	
Commentary on Doron Swade	237
Joachim Fischer	
Towards a Software Museum: Challenges and Opportunities	245
Ernst Denert and Klaus-Peter Löhr	
Towards a Software Museum: Challenges and Opportunities	261
Friedrich L. Bauer	
Preserving Software in History Museums: A Material Culture Approach ..	263
David K. Allison	
Commentary on David K. Allison, “Preserving Software in History Museums”	273
Hartmut Petzold	
Epilogue	275
Probing the Elephant: How Do the Parts Fit Together?	277
Michael S. Mahoney
