Preface

The DARS (Distributed Autonomous Robotic Systems) symposia series have spun around the globe every two years since 1992.

The 2004 edition was held on June 23-25 at LAAS-CNRS in Toulouse, France, and attended by over 75 international participants from 16 countries in Asia, the Americas and Europe.

The 46 papers selected by a peer review process provide an excellent coverage of the latest progress in the state of the art in multi-robot systems. The main topics at DARS 2004 addressed the challenges facing the distribution of embodied intelligence, the interaction of intelligent machines and the complex dynamics emerging from interacting agents.

Papers reported on latest research results on several frontier problems. One of the exciting issues is reconfigurability, be it software or hardware, and its relation to growth. Another flourishing research topic is the design of architectures providing for distributed control among (sometimes heterogeneous) robots, while preserving coherence of their behavior. Mobility and motion coordination among multiple robots is another central issue. Other reported work focuses on the relationship between mobility and intelligence, where co-operative behaviors emerge from interaction. Cooperation and coordination are however much wider than mobility and several papers address these issues for the accomplishment of tasks by multiple robots. One of those tasks is perception and mapping, in which cooperation poses difficult problems of information sharing. Several papers addressed the interaction of large numbers of entities in swarms or in groups, a very rich interdisciplinary question on which robotics and ethology share common research agendas.

Transversal to all the issues is the communication problem: how much is necessary? what to exchange, how and when? How to preserve the communication link? This was the topic of several papers as well as the keynote on “Communication-sensitive Planning and Behavior for Multi-Robot Teams” by Ronald C. Arkin.

The conference would not have taken place without the contribution of sponsors, whom we would like to thank: the French National Research Center

(CNRS), the Robotics Society of Japan (RSJ), The French Ministry of Research, the Midi-Pyrénées Region, the European Robotics Network EURON, The Society of Instrument and Control Engineers of Japan (SICE), the Federation of Research in Computer and Control Sciences in Toulouse (FERIA) and LAAS.

The success of the conference is based on the active contribution of the members of the organizing committee, and on the quality and thoroughness of the reviews provided by the Program Committee members whom we would like to thank. We would like also to thank Ms. Jackie Som, Ms. Dominique Daurat, Ms. Marie-José Fontagne, Ms. Marie Dervillers and Jean-Michel Pons for their invaluable help with local arrangements, document edition and the conference website.

Contents

Part I Reconfigurable Robots I

Self-Reconfiguration Using Directed Growth

Kasper Stoy, Radhika Nagpal 3

A hardware/software architecture for the control of self reconfigurable robots

Claude Guéganno, Dominique Duhaut 13

Emergent Morphology Control of a Modular Robot by Exploiting the Interaction between Control and Mechanical Dynamics

Masahiro Shimizu, Masayasu Takahashi, Toshihiro Kawakatsu, Akio Ishiguro 23

HydroGen: Automatically Generating Self-Assembly Code for Hydron Units

George Konidaris, Tim Taylor, John Hallam 33

Part II Emergence of Intelligence Through Mobility

Local Obstacle Avoidance with Reliable Goal Acquisition for Mobile Robots

Chomchana Trevai, Ryota Takemoto, Yusuke Fukazawa, Jun Ota, Tamio Arai 45

Adaptive Routing System by Intelligent Environment with Media Agents

Takenori Matsuoka, Daisuke Kurabayashi, Katsunori Urano 55

Multi-Robot Concurrent Learning in Museum Problem	
<i>Zheng Liu, Marcelo H. Ang Jr., Winston Khoon Guan Seah</i>	65
How a Cooperative Behavior can emerge from a Robot Team	
<i>Antonio D'Angelo, Emanuele Menegatti, Enrico Pagello</i>	75
Vehicle Guidance System using Local Information Assistants	
<i>Kuniaki Kawabata, Madoka Doi, Daisuke Chugo, Hayato Kaetsu, Hajime Asama</i>	85

Part III Multi-Robot Perception

Topological Map Merging	
<i>Wesley H. Huang, Kristopher Beevers</i>	97
An approach to active sensing using the Viterbi algorithm	
<i>Frank E. Schneider, Andreas Kr��u��ling, Dennis Wildermuth</i>	107
Using Group Knowledge for Multitarget Terrain-Based State Estimation	
<i>Edward Sobiesk, Maria Gini, John A. Marin</i>	117
Multi-AUVs for Visual Mapping Tasks	
<i>S. Botelho, R. Costa, R. Neves, C. Madsen, V. Oliveira</i>	127

Part IV Reconfigurable Robots II

Cellular Robots Forming a Mechanical Structure (Evaluation of structural formation and hardware design of "CHOBIE II")	
<i>Michihiko Koseki, Kengo Minami, Norio Inou</i>	139
Planning Behaviors of Modular Robots with Coherent Structure using Randomized Method	
<i>Eiichi Yoshida, Haruhisa Kurokawa, Akiya Kamimura, Satoshi Murata, Kohji Tomita, Shigeru Kokaji</i>	149
In-Place Distributed Heterogeneous Reconfiguration Planning	
<i>Robert Fitch, Zack Butler, Daniela Rus</i>	159
Distributed Metamorphosis of Regular M-TRAN Structures	
<i>Esben H. Ostegaard, Kohji Tomita, Haruhisa Kurokawa</i>	169

Part V Task Allocation — Multi-Robot Cooperation

Multi-Robot Task Allocation Method for Heterogeneous Tasks with Priorities	
<i>José Guerrero, Gabriel Oliver</i>	181
Decentralized Markov Decision Processes for Handling Temporal and Resource constraints in a Multiple Robot System	
<i>Aurélié Beynier, Abdel-Allah Mouaddib</i>	191
Emergent Robot Differentiation for Distributed Multi-Robot Task Allocation	
<i>Torbjørn S. Dahl, Maja J. Matarić, Gaurav S. Sukhatme</i>	201
Cooperative Control Method Using Evaluation Information on Objective Achievement	
<i>Hikari Fujii, Daiki Sakai, Kazuo Yoshida</i>	211
Multiple UAV cooperative searching operation using polygon area decomposition and efficient coverage algorithms	
<i>Ivan Maza, Anibal Ollero</i>	221

Part VI Control Architectures

A Distributed Architecture for Autonomous Unmanned Aerial Vehicle Experimentation	
<i>Patrick Doherty, Patrick Haslum, Fredrik Heintz, Torsten Merz, Per Nyblom, Tommy Persson, Bjorn Wingman</i>	233
Aerial Shepherds: Coordination among UAVs and Swarms of Robots	
<i>Luiz Chaimowicz, Vijay Kumar</i>	243
Dispersing robots in an unknown environment	
<i>Ryan Morlok, Maria Gini</i>	253
Embedding heterogeneous levels of decisional autonomy in multi-robot systems	
<i>Jeremi Gancet, Simon Lacroix</i>	263

Part VII Distributed Problem Solving

Collective Energy Distribution: Maintaining the Energy Balance in Distributed Autonomous Robots using Trophallaxis	
<i>Chris Melhuish, Masao Kubo</i>	275

Building Blocks for Multi-robot Construction

Justin Werfel.....285

Coordinating Aerial Robots and Sensor Networks for Localization and Navigation

Peter Corke, Ron Peterson, Daniela Rus.....295

Pervasive *Sensor-less* Networks for Cooperative Multi-robot Tasks

Keith J. O'Hara, Tucker Balch305

Part VIII Group Behavior

Communication Strategies in Multi-robot Search and Retrieval: Experiences with MinDART

Paul E. Rybski, Amy Larson, Harini Veeraraghavan, Monica LaPoint, Maria Gini.....317

Value-Based Communication Preservation for Mobile Robots

Matthew D. Powers, Tucker Balch327

Dynamical Reconfiguration of Cooperation Structure by Interaction Network

Kosuke Sekiyama, Yukihiisa Okade337

Collecting Behavior of Interacting Robots with Virtual Pheromone

Toshiya Kazama, Ken Sugawara, Toshinori Watanabe347

Part IX Swarm Intelligence

Distributed Autonomous Micro Robots: From Small Clusters to a Real Swarm

Heinz Woern, Joerg Seyfried359

Modeling and Optimization of a Swarm-Intelligent Inspection System

Nikolaus Correll, Alcherio Martinoli.....369

Scalable Control of Distributed Robotic Macrosensors

Brian Shucker, John K. Bennett379

Self-Organised Task Allocation in a Group of Robots

Thomas Labella, Marco Dorigo, Jean-Louis Deneubourg389

Distributed Algorithms for Dispersion in Indoor Environments Using a Swarm of Autonomous Mobile Robots	
<i>James McLurkin, Jennifer Smith</i>	399

Part X Motion Coordination

Optimal Design Methodology for an AGV Transportation System by Using the Queuing Network Theory	
<i>Satoshi Hoshino, Jun Ota, Akiko Shinozaki, Hideki Hashimoto</i>	411
Control of Vehicle Cooperative Behavior in Non-Signalized Intersection	
<i>Yusuke Ikemoto, Yasuhisa Hasegawa, Toshio Fukuda, Kazuhiko Matsuda</i>	421
High-Level Modeling of Cooperative Mobile Robot Systems	
<i>Roberto Sánchez-Herrera, Norma Villanueva-Paredes, Ernesto López-Mellado</i>	431

Part XI Distributed Control

Lateral and Longitudinal Stability for Decentralized Formation Control	
<i>David J. Naffin, Mehmet Akar, Gaurav S. Sukhatme</i>	443
Decentralized Cooperative Object Transportation by Multiple Mobile Robots with a Pushing Leader	
<i>ZhiDongWang, Yugo Takano, Yasuhisa Hirata, Kazuhiro Kosuge</i>	453

Part XII Applications

Attentive Workbench: An Intelligent Production Cell Supporting Human Workers	
<i>Masao Sugi, Yusuke Tamura, Jun Ota, Tamio Arai, Kiyoshi Takamasu, KiyoshiKotani, Hiromasa Suzuki, Yoichi Sato</i>	465
Development of a Forward-Hemispherical Vision Sensor for Remote Control of a Small Mobile Robot and for Acquisition of Visual-Information	
<i>Jyun-ichi Eino, Masakazu Araki, Jun-ichi Takiguchi, Takumi Hashizume</i>	475
