

Wireless Networks

Sereis Editor

Xuemin Sherman Shen

University of Waterloo, Waterloo, ON, Canada

The purpose of Springer's Wireless Networks book series is to establish the state of the art and set the course for future research and development in wireless communication networks. The scope of this series includes not only all aspects of wireless networks (including cellular networks, WiFi, sensor networks, and vehicular networks), but related areas such as cloud computing and big data. The series serves as a central source of references for wireless networks research and development. It aims to publish thorough and cohesive overviews on specific topics in wireless networks, as well as works that are larger in scope than survey articles and that contain more detailed background information. The series also provides coverage of advanced and timely topics worthy of monographs, contributed volumes, textbooks and handbooks.

Preface

The unprecedented surge of mobile data traffic requires future wireless networks to support both high spectral efficiency and energy efficiency. The currently employed orthogonal frequency division multiplexing (OFDM) technique, unfortunately, is not capable of satisfying such requirements. The OFDM modulation is prone to Doppler-induced intercarrier interference. Its inherent high peak-to-average power ratio also necessitates expensive power amplifiers. In this context, novel advanced modulation techniques are therefore very much needed. Among these, the recently emerging index modulation has attracted significant interest. Index modulation refers to a family of modulation techniques that leverage upon the on–off state of the transmission entities such as antenna, signal constellation, spreading code, and pilot to convey information. A prominent feature of index modulation is that the additional information is implicitly transmitted over the emitted signal at the cost of little or even no power, achieving significant benefits in terms of spectral efficiency and energy efficiency. The recent standardization that OFDM is deemed as both uplink and downlink waveforms of the fifth-generation wireless networks sets off a new wave of development of index modulation techniques for OFDM communications systems.

This monograph includes transceiver design, system optimization, and performance analysis of index modulation techniques based on constellation, code, and pilot resources for OFDM communications systems. The chapters of this monograph are relatively independent of each other. The readers can go directly to the chapter(s) of interest. In Chap. 1, the motivation of this monograph and a brief review of index modulation techniques are introduced. In Chap. 2, constellation-based index modulation that uses a combinatorial approach is presented. In Chap. 3, constellation-based index modulation that uses a permutational approach is studied, including the basic, generalized, and diversity-enhancing forms. In Chap. 4, code-based index modulation that exploits the indices of spreading codes to convey additional information is investigated, followed by two extensions. In Chap. 5, pilot-based index modulation that applies the positions of pilots for information transfer is proposed, including the applications to carrier phase tracking and channel

estimation. Finally, in Chap. 6, some open problems and discussions about the future research directions are highlighted.

This monograph is designed for researchers in the field of wireless communications.

Acknowledgments

We would like to thank Mr. Wensong Zhang, Mr. Yuekai Zhang, Mr. Meng Zhang, Dr. Jun Li, Dr. Ertugrul Basar, and Dr. Beixiong Zheng for their much help in the research. Finally, we would like to thank the continued support from the National Natural Science Foundation of China under grant 61871190, and the Natural Science Foundation of Guangdong province under grant 2018B030306005. Ministry National Key Research and Development Project under Grant 2017YFE0121400: 2019–2020 and the Open Research Fund from Shenzhen Research Institute of Big Data under Grant No. 2019ORF01006.

Contents

- 1 Introduction 1**
 - 1.1 OFDM Overview and Challenges 1
 - 1.2 Introduction of Index Modulation 3
 - 1.2.1 Index Modulation in Space 4
 - 1.2.2 Index Modulation in Space-Time 4
 - 1.2.3 Index Modulation in Frequency 5
 - 1.2.4 Index Modulation in Code..... 5
 - 1.3 Index Modulation for OFDM Systems..... 6
 - 1.3.1 Origins and Basic Forms 6
 - 1.3.2 Development and Variants..... 7
 - 1.3.3 Performance Enhancement Approach 9
 - 1.3.4 Some Applications..... 10
 - 1.4 Organization of the Monograph 11
 - References 11
- 2 Constellation-Based Index Modulation: A Combinatorial Approach..... 17**
 - 2.1 OFDM with Index Modulation 17
 - 2.1.1 System Model 17
 - 2.1.2 Low-Complexity Detection 20
 - 2.1.3 Performance Evaluation 21
 - 2.2 Information Guided Precoding for OFDM..... 23
 - 2.2.1 System Model 23
 - 2.2.2 Grouped Index Modulation..... 26
 - 2.2.3 Layered Index Modulation 32
 - 2.2.4 Detector Design and Complexity Analysis 35
 - 2.2.5 Performance Analysis 38
 - 2.2.6 Performance Evaluation 40
 - 2.3 Summary 45
 - References 47

3	Constellation-Based Index Modulation: A Permutational Approach	49
3.1	Multiple-Mode Index Modulation	49
3.1.1	System Model	49
3.1.2	Mode and Parameter Selection	53
3.1.3	Extension to I/Q Dimension	60
3.1.4	Receiver Design and Performance Analysis	63
3.1.5	Performance Evaluation	69
3.2	Generalized Multiple-Mode Index Modulation	75
3.2.1	System Model	75
3.2.2	Design Guideline with Same Instantaneous Subcarrier Power Constraint	79
3.2.3	Design Guideline with Average Subcarrier Power Constraint	80
3.2.4	Low-Complexity Receiver Design	86
3.2.5	Performance Evaluation	90
3.3	Diversity Enhancing Multiple-Mode Index Modulation	96
3.3.1	Coordinate Interleaved Multiple-Mode Index Modulation	96
3.3.2	Linear Constellation Precoded Multiple-Mode Index Modulation	98
3.3.3	Optimal Design	100
3.3.4	Performance Evaluation	106
3.4	Summary	111
	References	112
4	Code-Based Index Modulation	115
4.1	System Model	115
4.1.1	Transmitter Design	115
4.1.2	Receiver Design	118
4.2	Performance Analysis for Average Bit Error Probability	121
4.2.1	ABEP Upper Bound for the ML Detector	121
4.2.2	ABEP Analysis for the MRC Detector	122
4.3	Extension to Multi-Code and Multi-User Scenarios	131
4.3.1	Extension to Multi-Code Scenario	131
4.3.2	Extension to Multi-User Scenario	132
4.4	Performance Evaluation	134
4.4.1	Performance of Index Modulated OFDM Spread Spectrum	134
4.4.2	Performance of Index Modulated Multi-Carrier Code Division Multiple Access	139
4.4.3	Complexity Comparison	140
4.5	Summary	142
	References	142

5	Pilot-Based Index Modulation	145
5.1	Index Modulated Pilot Insertion for Carrier Phase Tracking	145
5.1.1	Transmitter Design	146
5.1.2	Receiver Design.....	149
5.2	Index Modulated Pilot Insertion for Channel Estimation	153
5.2.1	Transmitter Design	153
5.2.2	Receiver Design.....	156
5.3	Performance Evaluation	160
5.3.1	Carrier Phase Tracking	160
5.3.2	Channel Estimation	162
5.3.3	Power Allocation	165
5.4	Summary	166
	References	167
6	Conclusions and Future Directions	169
6.1	Conclusions	169
6.2	Future Directions.....	171

Acronyms

ABEP	Average bit error probability
APM	Amplitude phase modulation
AWGN	Additive white Gaussian noise
BER	Bit error rate
CFO	Carrier frequency offset
CGD	Coding gain distance
CIR	Channel impulse response
CP	Cyclic prefix
CSI	Channel state information
DF	Decode-and-forward
DFT	Discrete Fourier transform
DM-OFDM	Dual-mode aided OFDM
DSM	Differential spatial modulation
FFT	Fast Fourier transform
GSM	Generalized spatial modulation
ICI	Intercarrier interference
ICT	Information and communication technology
IDFT	Inverse discrete Fourier transform
IFFT	Inverse fast Fourier transform
IM-OFDM-SS	Index modulated OFDM spread spectrum
LLR	Log-likelihood ratio
MIMO	Multiple-input multiple-output
ML	Maximum-likelihood
MM-OFDM-IM	Multiple-mode OFDM with index modulation
MRC	Maximal ratio combining
NOMA	Non-orthogonal multiple access
OFDM	Orthogonal frequency division multiplexing
OFDM-IM	OFDM with index modulation
PAM	Pulse amplitude modulation
PAPR	Peak-to-average power ratio
PDF	Probability density function

PEP	Pairwise error probability
PPD	Pilot position detection
PPS	Pilot position selection
PSK	Phase shift keying
QAM	Quadrature amplitude modulation
RF	Radio frequency
SAP	Subcarrier activation pattern
SE	Spectral efficiency
SM	Spatial modulation
SNR	Signal-to-noise ratio
WLAN	Wireless local area network
