Preface

In many situations found both in Nature and in human-built systems, a set of mixed signals is observed (frequently also with noise), and it is of great scientific and technological relevance to be able to isolate or separate them so that the information in each of the signals can be utilized.

Blind source separation (BSS) research is one of the more interesting emerging fields nowadays in the field of signal processing. It deals with the algorithms that allow the recovery of the original sources from a set of mixtures only. The adjective “blind” is applied because the purpose is to estimate the original sources without any a priori knowledge about either the sources or the mixing system. Most of the models employed in BSS assume the hypothesis about the independence of the original sources. Under this hypothesis, a BSS problem can be considered as a particular case of independent component analysis (ICA), a linear transformation technique that, starting from a multivariate representation of the data, minimizes the statistical dependence between the components of the representation. It can be claimed that most of the advances in ICA have been motivated by the search for solutions to the BSS problem and, the other way around, advances in ICA have been immediately applied to BSS.

ICA and BSS algorithms start from a mixture model, whose parameters are estimated from the observed mixtures. Separation is achieved by applying the inverse mixture model to the observed signals (separating or unmixing model). Mixture models usually fall into three broad categories: instantaneous linear models, convolutive models and nonlinear models, the first one being the simplest but, in general, not near realistic applications. The development and test of the algorithms can be accomplished through synthetic data or with real-world data. Obviously, the most important aim (and most difficult) is the separation of real-world mixtures. BSS and ICA have strong relations also, apart from signal processing, with other fields such as statistics and artificial neural networks.

As long as we can find a system that emits signals propagated through a mean, and those signals are received by a set of sensors and there is an interest in recovering the original sources, we have a potential field of application for BSS and ICA. Inside that wide range of applications we can find, for instance: noise reduction applications, biomedical applications, audio systems, telecommunications, and many others.

This volume comes out just 20 years after the first contributions in ICA and BSS appeared¹. Thereinafter, the number of research groups working in ICA and BSS has been constantly growing, so that nowadays we can estimate that far more than 100 groups are researching in these fields.

As proof of the recognition among the scientific community of ICA and BSS developments there have been numerous special sessions and special issues in several well-

¹ J. Herault, B. Ans, “Circuits neuronaux à synapses modifiables: décodage de messages composites para apprentissage non supervise”, *C.R. de l'Académie des Sciences*, vol. 299, no. III-13, pp. 525–528, 1984.

Independently, two years before, although without the scientific impact of the previous reference, the following contribution was published:

J.W. Barness, Y. Carlin, and M.L. Steinberger, “Bootstrapping adaptive interference cancelers: some practical limitations”, *Proc. of the Globecom Conference*, pp. 1251–1255, 1982.

known conferences and journals, such as GRETSI, NOLTA, ISCAS, EUSIPCO, NIPS, ESANN, IWANN, etc. An important landmark in the development of ICA was the organization of the first conference dedicated to ICA and BSS: the 1st International Workshop on Blind Source Separation and Independent Component Analysis (ICA 1999), which occurred in Aussois (France) in 1999. This workshop has been taking place since then about every 18 months, in Helsinki, Finland (ICA 2000), San Diego, California, USA (ICA 2001), and Nara, Japan (ICA 2003).

This volume of Lecture Notes in Computer Science encompasses the contributions to ICA 2004 which was held in Granada (Spain), presenting new ideas and challenges for ICA and BSS. This volume is composed of 156 contributions, selected after a peer-review process from 203 original contributions. The manuscripts were organized into the following eight sections:

1. Theory and fundamentals
2. Linear models
3. Convolutional models
4. Nonlinear models
5. Speech processing applications
6. Image processing applications
7. Biomedical applications
8. Other applications

We would like to thank all members of the International Advisory and Program Committees, who evaluated many contributions in a short time schedule. Other volunteers participated in the reviewing process, to whom we express our gratitude.

We are also very grateful to the University of Granada, the MEC (*Ministerio de Educación y Cultura*), *Consejería de Universidades* of the Andalusian Regional Government, and the Spanish CICYT (*Comisión Interministerial de Ciencia y Tecnología*) for their generous help.

The editors would like to thank Springer-Verlag, in particular Mr. Alfred Hofmann, for their collaboration and attention.

Finally, many thanks to all the authors who submitted their contributions and who made this volume possible.

Table of Contents

Theory and Fundamentals

A FastICA Algorithm for Non-negative Independent Component Analysis	1
<i>Zhijian Yuan and Erkki Oja</i>	
Blind Source Separation by Adaptive Estimation of Score Function Difference	9
<i>Samareh Samadi, Massoud Babaie-Zadeh, Christian Jutten, and Kambiz Nayebi</i>	
Exploiting Spatiotemporal Information for Blind Atrial Activity Extraction in Atrial Arrhythmias	18
<i>Francisco Castells, Jorge Igual, Vicente Zarzoso, José Joaquín Rieta, and José Millet</i>	
Gaussianizing Transformations for ICA	26
<i>Deniz Erdogmus, Yadunandana N. Rao, and José Carlos Príncipe</i>	
New Eigensystem-Based Method for Blind Source Separation	33
<i>Rubén Martín-Clemente, Susana Hornillo-Mellado, Carlos G. Puntonet, and José I. Acha</i>	
Optimization Issues in Noisy Gaussian ICA	41
<i>Jean-François Cardoso and Dinh-Tuan Pham</i>	
Optimization Using Fourier Expansion over a Geodesic for Non-negative ICA . . .	49
<i>Mark D. Plumbley</i>	
The Minimum Support Criterion for Blind Signal Extraction: A Limiting Case of the Strengthened Young's Inequality	57
<i>Sergio Cruces and Iván Durán</i>	
Accurate, Fast and Stable Denoising Source Separation Algorithms	65
<i>Harri Valpola and Jaakko Särelä</i>	
An Overview of BSS Techniques Based on Order Statistics: Formulation and Implementation Issues	73
<i>Yolanda Blanco and Santiago Zazo</i>	
Analytical Solution of the Blind Source Separation Problem Using Derivatives . . .	81
<i>Sebastien Lagrange, Luc Jaulin, Vincent Vigneron, and Christian Jutten</i>	
Approximate Joint Diagonalization Using a Natural Gradient Approach	89
<i>Arie Yeredor, Andreas Ziehe, and Klaus-Robert Müller</i>	

BSS, Classification and Pixel Demixing	97
<i>Albert Bijaoui, Danielle Nuzillard, and Tanusree Deb Barma</i>	
Blind Identification of Complex Under-Determined Mixtures	105
<i>Pierre Comon and Myriam Rajih</i>	
Blind Separation of Heavy-Tailed Signals Using Normalized Statistics	113
<i>Mohamed Sahmoudi, Karim Abed-Meraim, and Messaoud Benidir</i>	
Blind Source Separation of Linear Mixtures with Singular Matrices	121
<i>Pando Georgiev and Fabian J. Theis</i>	
Closely Arranged Directional Microphone for Source Separation	129
<i>Yusuke Katayama, Masanori Ito, Allan Kardec Barros, Yoshinori Takeuchi, Tetsuya Matsumoto, Hiroaki Kudo, Noboru Ohnishi, and Toshiharu Mukai</i>	
Estimating Functions for Blind Separation when Sources Have Variance-Dependencies	136
<i>Motoaki Kawanabe and Klaus-Robert Müller</i>	
Framework of Constrained Matrix Gradient Flows	144
<i>Gen Hori</i>	
Identifiability, Subspace Selection and Noisy ICA	152
<i>Mike Davies</i>	
Improving GRNNs in CAD Systems	160
<i>Fulgencio S. Buendía Buendía, J. Miguel Barrón-Adame, Antonio Vega-Corona, and Diego Andina</i>	
Fisher Information in Source Separation Problems	168
<i>Vincent Vigneron and Christian Jutten</i>	
Localization of P300 Sources in Schizophrenia Patients Using Constrained BSS . .	177
<i>Saeid Sanei, Loukianos Spyrou, Wenwu Wang, and Jonathon A. Chambers</i>	
On the Estimation of the Mixing Matrix for Underdetermined Blind Source Separation in an Arbitrary Number of Dimensions	185
<i>Luis Vielva, Ignacio Santamaría, Jesús Ibáñez, Deniz Erdogmus, and José Carlos Príncipe</i>	
On the Minimum ℓ_1 -Norm Signal Recovery in Underdetermined Source Separation	193
<i>Ichigaku Takigawa, Mineichi Kudo, Atsuyoshi Nakamura, and Jun Toyama</i>	
On the Strong Uniqueness of Highly Sparse Representations from Redundant Dictionaries	201
<i>Rémi Gribonval and Morten Nielsen</i>	

Reliability of ICA Estimates with Mutual Information	209
<i>Harald Stögbauer, Ralph G. Andrzejak, Alexander Kraskov, and Peter Grassberger</i>	
Robust ICA for Super-Gaussian Sources	217
<i>Frank C. Meinecke, Stefan Harmeling, and Klaus-Robert Müller</i>	
Robustness of Prewhitening Against Heavy-Tailed Sources	225
<i>Aiyu Chen and Peter J. Bickel</i>	
Simultaneous Extraction of Signal Using Algorithms Based on the Nonstationarity	233
<i>Juan Charneco Fernández</i>	
Space-Time Variant Blind Source Separation with Additive Noise	240
<i>Ivica Kopriva and Harold Szu</i>	
The Use of ICA in Speckle Noise	248
<i>D. Blanco, B. Mulgrew, S. McLaughlin, D.P. Ruiz, and M.C. Carrion</i>	
Theoretical Method for Solving BSS-ICA Using SVM	256
<i>Carlos G. Puntonet, Juan Manuel Górriz, Moisés Salmerón, and Susana Hornillo-Mellado</i>	
Wavelet De-noising for Blind Source Separation in Noisy Mixtures	263
<i>Bertrand Rivet, Vincent Vigneron, Anisoara Paraschiv-Ionescu, and Christian Jutten</i>	

Linear Mixture Models

A Gaussian Mixture Based Maximization of Mutual Information for Supervised Feature Extraction	271
<i>José M. Leiva-Murillo and Antonio Artés-Rodríguez</i>	
Blind Separation of Nonstationary Sources by Spectral Decorrelation	279
<i>Shahram Hosseini and Yannick Deville</i>	
Delayed AMUSE – A Tool for Blind Source Separation and Denoising	287
<i>Ana R. Teixeira, Ana Maria Tomé, Elmar W. Lang, and Kurt Stadthanner</i>	
Dimensionality Reduction in ICA and Rank- $(R_1, R_2, \dots, R_N)$ Reduction in Multilinear Algebra	295
<i>Lieven De Lathauwer and Joos Vandewalle</i>	
Linear Multilayer Independent Component Analysis Using Stochastic Gradient Algorithm	303
<i>Yoshitatsu Matsuda and Kazunori Yamaguchi</i>	

Minimax Mutual Information Approach for ICA
of Complex-Valued Linear Mixtures 311
Jian-Wu Xu, Deniz Erdogmus, Yadunandana N. Rao, and José Carlos Príncipe

Signal Reconstruction in Sensor Arrays
Using Temporal-Spatial Sparsity Regularization 319
Dmitri Model and Michael Zibulevsky

Underdetermined Source Separation with Structured Source Priors 327
Emmanuel Vincent and Xavier Rodet

A Grassmann-Rayleigh Quotient Iteration for Dimensionality Reduction in ICA . 335
Lieven De Lathauwer, Luc Hoegaerts, and Joos Vandewalle

An Approach of Moment-Based Algorithm for Noisy ICA Models 343
Daisuke Ito and Noboru Murata

Geometrical ICA-Based Method for Blind Separation
of Super-Gaussian Signals 350
*Manuel Rodríguez-Álvarez, Fernando Rojas Ruiz,
Rubén Martín-Clemente, Ignacio Rojas Ruiz, and Carlos G. Puntonet*

A Novel Method to Recover N Sources from N-1 Observations
and Its Application to Digital Communications 358
Adriana Dapena

A Sufficient Condition for Separation of Deterministic Signals
Based on Spatial Time-Frequency Representations 366
Nadège Thirion-Moreau, El Mostafa Fadaili, and Eric Moreau

Adaptive Robust Super-exponential Algorithms
for Deflationary Blind Equalization of Instantaneous Mixtures 374
*Masanori Ito, Masashi Ohata, Mitsuru Kawamoto, Toshiharu Mukai,
Yujiro Inouye, and Noboru Ohnishi*

Application of Gaussian Mixture Models for Blind Separation
of Independent Sources 382
Koby Todros and Joseph Tabrikian

Asymptotically Optimal Blind Separation of Parametric Gaussian Sources 390
Eran Doron and Arie Yeredor

Bayesian Approach for Blind Separation of Underdetermined Mixtures
of Sparse Sources 398
Cédric Févotte, Simon J. Godsill, and Patrick J. Wolfe

Blind Source Separation
Using the Block-Coordinate Relative Newton Method 406
Alexander M. Bronstein, Michael M. Bronstein, and Michael Zibulevsky

Hybridizing Genetic Algorithms with ICA in Higher Dimension	414
<i>Juan Manuel G3rriz, Carlos G. Puntonet, Mois3s Salmer3n, and Fernando Rojas Ruiz</i>	
ICA Using Kernel Entropy Estimation with NlogN Complexity	422
<i>Sarit Shwartz, Michael Zibulevsky, and Yoav Y. Schechner</i>	
Soft-LOST: EM on a Mixture of Oriented Lines	430

A New Method for Eliminating Stimulus Artifact in Transient Evoked Otoacoustic Emission Using ICA	1041
<i>Ju Liu, Yu Du, Jing Li, and Kaibao Nie</i>	
An Efficient Time-Frequency Approach to Blind Source Separation Based on Wavelets	1048
<i>Christian W. Hesse and Christopher J. James</i>	
Blind Deconvolution of Close-to-Orthogonal Pulse Sources Applied to Surface Electromyograms	1056
<i>Ales Holobar and Damjan Zazula</i>	
Denoising Mammographic Images Using ICA	1064
<i>P. Mayo, Francisco Rodenas Escriba, and Gumersindo Verdú Martín</i>	
Independent Component Analysis of Pulse Oximetry Signals Based on Derivative Skew	1072
<i>Paul F. Stetson</i>	
Mixing Matrix Pseudostationarity and ECG Preprocessing Impact on ICA-Based Atrial Fibrillation Analysis	1079
<i>José Joaquín Rieta, César Sánchez, Juan Manuel Sanchis, Francisco Castells, and José Millet</i>	
‘Signal Subspace’ Blind Source Separation Applied to Fetal Magnetocardiographic Signals Extraction	1087
<i>Giulia Barbati, Camillo Porcaro, and Carlo Salustri</i>	
Suppression of Ventricular Activity in the Surface Electrocardiogram of Atrial Fibrillation	1095
<i>Mathieu Lemay, Jean-Marc Vesin, Zenichi Ihara, and Lukas Kappenberger</i>	
Unraveling Spatio-temporal Dynamics in fMRI Recordings Using Complex ICA	1103
<i>Jörn Anemüller, Jeng-Ren Duann, Terrence J. Sejnowski, and Scott Makeig</i>	
Wavelet Domain Blind Signal Separation to Analyze Supraventricular Arrhythmias from Holter Registers	1111
<i>César Sánchez, José Joaquín Rieta, Francisco Castells, Raúl Alcaraz, and José Millet</i>	
Other Applications	
A New Auditory-Based Index to Evaluate the Blind Separation Performance of Acoustic Mixtures	1118
<i>Juan Manuel Sanchis, José Joaquín Rieta, Francisco Castells, and José Millet</i>	

An Application of ICA to Identify Vibratory Low-Level Signals Generated by Termites	1126
<i>Juan Jose G. de la Rosa, Carlos G. Puntonet, Juan Manuel Górriz, and Isidro Lloret</i>	
Application of Blind Source Separation to a Novel Passive Location	1134
<i>Gaoming Huang, Luxi Yang, and Zhenya He</i>	
Blind Source Separation in the Adaptive Reduction of Inter-channel Interference for OFDM	1142
<i>Rafael Boloix-Tortosa and Juan José Murillo-Fuentes</i>	
BSS for Series of Electron Energy Loss Spectra	1150
<i>Danielle Nuzillard and Noël Bonnet</i>	
HOS Based Distinctive Features for Preliminary Signal Classification	1158
<i>Maciej Pędzisz and Ali Mansour</i>	
ICA as a Preprocessing Technique for Classification	1165
<i>V. Sanchez-Poblador, Enric Monte-Moreno, and Jordi Solé-Casals</i>	
Joint Delay Tracking and Interference Cancellation in DS-CDMA Systems Using Successive ICA for Oversaturated Data	1173
<i>Tapani Ristaniemi and Toni Huovinen</i>	
Layered Space Frequency Equalisation for MIMO-MC-CDMA Systems in Frequency Selective Fading Channels	1181
<i>Sonu Punnoose, Xu Zhu, and Asoke K. Nandi</i>	
Multiusers Detection and Channel Estimation in MIMO OFDM Systems via Blind Source Separation	1189
<i>Luciano Sarperi, Asoke K. Nandi, and Xu Zhu</i>	
Music Transcription with ISA and HMM	1197
<i>Emmanuel Vincent and Xavier Rodet</i>	
On Shift-Invariant Sparse Coding	1205
<i>Thomas Blumensath and Mike Davies</i>	
Reliability in ICA-Based Text Classification	1213
<i>Xavier Sevillano, Francesc Alías, and Joan Claudi Socoró</i>	
Source Separation on Astrophysical Data Sets from the WMAP Satellite	1221
<i>Guillaume Patanchon, Jacques Delabrouille, and Jean-François Cardoso</i>	
Multidimensional ICA for the Separation of Atrial and Ventricular Activities from Single Lead ECGs in Paroxysmal Atrial Fibrillation Episodes	1229
<i>Francisco Castells, Cibeles Mora, José Millet, José Joaquín Rieta, César Sánchez, and Juan Manuel Sanchis</i>	

Music Indexing Using Independent Component Analysis
with Pseudo-generated Sources 1237
E.S. Gopi, R. Lakshmi, N. Ramya, and S.M. Shereen Farzana
