Preface

This volume contains a selection of refereed papers from participants of the workshop “Construction and Analysis of Safe, Secure and Interoperable Smart Devices” (CASSIS), held from the 10th to the 13th March 2004 in Marseille, France:

<http://www-sop.inria.fr/everest/events/cassis04/>

The workshop was organized by INRIA (Institut National de Recherche en Informatique et en Automatique), France and the University de la Méditerranée, Marseille, France. The workshop was attended by nearly 100 participants, who were invited for their contributions to relevant areas of computer science.

The aim of the workshop was to bring together experts from the smart devices industry and academic researchers, with a view to stimulate research on formal methods and security, and to encourage the smart device industry to adopt innovative solutions drawn from academic research.

The next generation of smart devices holds the promise of providing the required infrastructure for the secure provision of multiple and personalized services. In order to deliver their promise, the smart device technology must however pursue the radical evolution that was initiated with the adoption of multi-application smartcards. Typical needs include:

- The possibility for smart devices to feature extensible computational infrastructures that may be enhanced to support increasingly complex applications that may be installed post-issuance, and may require operating system functionalities that were not pre-installed. Such additional flexibility must however not compromise security.
- The possibility for smart devices to achieve a better integration with larger computer systems, through improved connectivity, genericity, as well as interoperability.
- The possibility for smart devices to protect themselves and the applications they host from hostile applications, by subjecting incoming applications to analyses that bring strong guarantees in terms of confidentiality or resource control.
- The possibility for application developers to establish through formal verification based on logical methods the correctness of their applications. In addition, application developers should be offered the means to convey to end-users or some trusted third party some verifiable evidence of the correctness of their applications.
- The possibility for smart devices to be modeled and proved correct formally, in order to achieve security evaluations such as Common Criteria at the highest levels.

In order to address the different issues raised by the evolution of smart devices, the workshop consisted of seven sessions featuring one keynote speaker and three or four invited speakers:

1. Trends in smart card research
2. Operating systems and virtual machine technologies
3. Secure platforms
4. Security
5. Application validation
6. Verification
7. Formal modeling

The keynote speakers for this edition were: Eric Vétillard (Trusted Logic), Ksheerabdh Krishna (Axalto), Xavier Leroy (INRIA), Pieter Hartel (U. of Twente), K. Rustan M. Leino (Microsoft Research), Jan Tretmans (U. of Nijmegen), and J. Strother Moore (U. of Texas at Austin).

In addition, a panel chaired by Pierre Paradinas (CNAM), and further consisting of Jean-Claude Huot (Oberthur Card Systems), Gilles Kahn (INRIA), Ksheerabdh Krishna (Axalto), Erik Poll (U. of Nijmegen), Jean-Jacques Quisquater (U. of Louvain), and Alain Sigaud (Gemplus), examined the opportunities and difficulties in adapting open source software for smart devices execution platforms.

We wish to thank the speakers and participants who made the workshop such a stimulating event, and the reviewers for their thorough evaluations of submissions. Furthermore, we gratefully acknowledge financial support from Conseil Général des Bouches-du-Rhône, Axalto, France Télécom R&D, Gemplus International, Microsoft Research and Oberthur Card Systems.

Organizing Committee

Gilles Barthe	INRIA Sophia Antipolis, France
Lilian Burdy	INRIA Sophia Antipolis, France
Marieke Huisman	INRIA Sophia Antipolis, France
Jean-Louis Lanet	INRIA DirDRI, France
Traian Muntean	University de la Méditerranée, Marseille, France

Reviewers

Cuihtlauac Alvarado	Rajeev Joshi	Judi Romijn
John Boyland	Florian Kammüller	Vlad Rusu
Michael Butler	Laurent Lagosanto	Peter Ryan
Koen Claessen	Yassine Lakhnech	David Sands
Alessandro Coglio	Xavier Leroy	Gerardo Schneider
Adriana Compagnoni	Gerald Lüttgen	Ulrik Pagh Schultz
Pierre Crégut	Anil Madhavapeddy	David Scott
Jean-Michel Douin	Claude Marché	Robert de Simone
Hubert Garavel	Ricardo Medel	Christian Skalka
Nikolaos Georgantas	Greg Morisett	Oscar Slotosch
Mike Gordon	Laurent Mounier	Kim Sunesen
Chris Hankin	Christophe Muller	Sabrina Tarento
Rene Rydhof Hansen	Alan Mycroft	Hendrik Tews
Klaus Havelund	Brian Nielsen	Mark Utting
Lex Heerink	David von Oheimb	Eric Vétillard
Ludovic Henrio	Arnd Poetzsch-Heftner	Willem Visser
Charuwalee Huadmai	Erik Poll	Olivier Zendra
Thierry Jéron	Christophe Rippert	Elena Zucca

Table of Contents

Mobile Resource Guarantees for Smart Devices	1
<i>David Aspinall, Stephen Gilmore, Martin Hofmann, Donald Sannella, and Ian Stark</i>	
History-Based Access Control and Secure Information Flow	27
<i>Anindya Banerjee and David A. Naumann</i>	
The Spec# Programming System: An Overview	49
<i>Mike Barnett, K. Rustan M. Leino, and Wolfram Schulte</i>	
Mastering Test Generation from Smart Card Software Formal Models	70
<i>Fabrice Bouquet, Bruno Legear, Fabien Peureux, and Eric Torreborre</i>	
A Mechanism for Secure, Fine-Grained Dynamic Provisioning of Applications on Small Devices	86
<i>William R. Bush, Antony Ng, Doug Simon, and Bernd Mathiske</i>	
ESC/Java2: Uniting ESC/Java and JML – Progress and Issues in Building and Using ESC/Java2, Including a Case Study Involving the Use of the Tool to Verify Portions of an Internet Voting Tally System	108
<i>David R. Cok and Joseph R. Kiniry</i>	
A Type System for Checking Applet Isolation in Java Card	129
<i>Werner Dietl, Peter Müller, and Arnd Poetzsch-Heffter</i>	
Verification of Safety Properties in the Presence of Transactions	151
<i>Reiner Hähnle and Wojciech Mostowski</i>	
Modelling Mobility Aspects of Security Policies	172
<i>Pieter Hartel, Pascal van Eck, Sandro Etalle, and Roel Wieringa</i>	
Smart Devices for Next Generation Mobile Services	192
<i>Chie Noda and Thomas Walter</i>	
A Flexible Framework for the Estimation of Coverage Metrics in Explicit State Software Model Checking	210
<i>Edwin Rodríguez, Matthew B. Dwyer, John Hatcliff, and Robby</i>	
Combining Several Paradigms for Circuit Validation and Verification	229
<i>Diana Toma, Dominique Borriane, and Ghiath Al Sammane</i>	
Smart Card Research Perspectives	250
<i>Jean-Jacques Vandewalle</i>	
Author Index	257
