# **INFORMATION SYSTEMS RESEARCH**

## **Relevant Theory and Informed Practice**

## **IFIP – The International Federation for Information Processing**

IFIP was founded in 1960 under the auspices of UNESCO, following the First World Computer Congress held in Paris the previous year. An umbrella organization for societies working in information processing, IFIP's aim is two-fold: to support information processing within its member countries and to encourage technology transfer to developing nations. As its mission statement clearly states,

*IFIP's mission is to be the leading, truly international, apolitical organization which encourages and assists in the development, exploitation and application of information technology for the benefit of all people.*

IFIP is a non-profitmaking organization, run almost solely by 2500 volunteers. It operates through a number of technical committees, which organize events and publications. IFIP's events range from an international congress to local seminars, but the most important are:

- The IFIP World Computer Congress, held every second year;
- Open conferences;
- Working conferences.

The flagship event is the IFIP World Computer Congress, at which both invited and contributed papers are presented. Contributed papers are rigorously refereed and the rejection rate is high.

As with the Congress, participation in the open conferences is open to all and papers may be invited or submitted. Again, submitted papers are stringently refereed.

The working conferences are structured differently. They are usually run by a working group and attendance is small and by invitation only. Their purpose is to create an atmosphere conducive to innovation and development. Refereeing is less rigorous and papers are subjected to extensive group discussion.

Publications arising from IFIP events vary. The papers presented at the IFIP World Computer Congress and at open conferences are published as conference proceedings, while the results of the working conferences are often published as collections of selected and edited papers.

Any national society whose primary activity is in information may apply to become a full member of IFIP, although full membership is restricted to one society per country. Full members are entitled to vote at the annual General Assembly, National societies preferring a less committed involvement may apply for associate or corresponding membership. Associate members enjoy the same benefits as full members, but without voting rights. Corresponding members are not represented in IFIP bodies. Affiliated membership is open to non-national societies, and individual and honorary membership schemes are also offered.

# CONTENTS

<b>Foreword</b>	xi
<b>Preface</b>	xv
<b>Conference Chairs</b>	xix
<b>Associate Editors</b>	xx
<b>Reviewers</b>	xxi
1 Young Turks, Old Guardsmen, and the Conundrum of the Broken Mold: A Progress Report on Twenty Years of Information Systems Research <i>Bonnie Kaplan, Duane P. Truex III, David Wastell, and A. Trevor Wood-Harper</i>	1
<b>Part 1: Panoramas</b>	
2 Doctor of Philosophy, Heal Thyself <i>Allen S. Lee</i>	21
3 Information Systems in Organizations and Society: Speculating on the Next 25 Years of Research <i>Steve Sawyer and Kevin Crowston</i>	35
4 Information Systems Research as Design: Identity, Process, and Narrative <i>Richard J. Boland, Jr., and Kalle Lyytinen</i>	53
<b>Part 2: Reflections on the IS Discipline</b>	
5 Information Systems—A Cyborg Discipline? <i>Magnus Ramage</i>	71
6 Cores and Definitions: Building the Cognitive Legitimacy of the Information Systems Discipline Across the Atlantic <i>Frantz Rowe, Duane P. Truex III, and Lynnette Kvasny</i>	83

7	Truth, Journals, and Politics: The Case of the <i>MIS Quarterly</i> <i>Lucas Introna and Louise Whittaker</i>	103
8	Debatable Advice and Inconsistent Evidence: Methodology in Information Systems Research <i>Matthew R. Jones</i>	121
9	The Crisis of Relevance and the Relevance of Crisis: Renegotiating Critique in Information Systems Scholarship <i>Teresa Marcon, Mike Chiasson, and Abhijit Gopal</i>	143
10	Whatever Happened to Information Systems Ethics? Caught between the Devil and the Deep Blue Sea <i>Frances Bell and Alison Adam</i>	159
11	Supporting Engineering of Information Systems in Emergent Organizations <i>Sandeep Purao and Duane P. Truex III</i>	175

### **Part 3: Critical Interpretive Studies**

12	The Choice of Critical Information Systems Research <i>Debra Howcroft and Eileen M. Trauth</i>	195
13	The Research Approach and Methodology Used in an Interpretive Study of a Web Information System: Contextualizing Practice <i>Anita Greenhill</i>	213
14	Applying Habermas' Validity Claims as a Standard for Critical Discourse Analysis <i>Wendy Cukier, Robert Bauer, and Catherine Middleton</i>	233
15	Conducting Critical Research in Information Systems: Can Actor- Network Theory Help? <i>Ela Kleučić</i>	259
16	Conducting and Evaluating Critical Interpretive Research: Examining Criteria as a Key Component in Building a Research Tradition <i>Marlei Pozzebon</i>	275
17	Making Contributions from Interpretive Case Studies: Examining Processes of Construction and Use <i>Michael Barrett and Geoff Walsham</i>	293

## Part 4: Action Research

- 18 Action Research: Time to Take a Turn?  
*Briony J. Oates* 315
- 19 The Role of Conventional Research Methods in Information Systems  
Action Research  
*Matt Germonprez and Lars Mathiassen* 335
- 20 Themes, Iteration, and Recoverability in Action Research  
*Sue Holwell* 353

## Part 5: Theoretical Perspectives in IS Research

- 21 The Use of Social Theories in 20 Years of WG 8.2 Empirical Research  
*Donal Flynn and Peggy Gregory* 365
- 22 StructurANTion in Research and Practice: Representing Actor  
Networks, Their Structurated Orders and Translations  
*Laurence Brooks and Chris Atkinson* 389
- 23 Socio-Technical Structure: An Experiment in Integrative Theory Building  
*Jeremy Rose, Rikard Lindgren, and Ola Henfridsson* 411
- 24 Exposing Best Practices Through Narrative: The ERP Example  
*Erica L. Wagner, Robert D. Galliers, and Susan V. Scott* 433
- 25 Information Systems Research and Development by Activity Analysis  
and Development: Dead Horse or the Next Wave?  
*Mikko Korpela, Anja Mursu, Abimbola Soriyan, Anne Erola,  
Heidi Häkkinen, and Marika Toivanen* 453
- 26 Making Sense of Technological Frames: Promise, Progress, and  
Potential  
*Elizabeth Davidson and David Pai* 473
- 27 Reflection on Development Techniques Using the Psychology  
Literature: Over Two Decades of Bias and Conceptual Blocks  
*Carl Adams and David E. Avison* 493

## **Part 6: Systems Development: Methods, Politics, and Users**

- 28 Enterprise System as an Orchestrator of Dynamic Capability Development:  
A Case Study of the IRAS and TechCo  
*Chee Wee Tan, Eric T. K. Lim, Shan Ling Pan, and Calvin M. L. Chan* 515
- 29 On Transferring a Method into a Usage Situation  
*Brian Lings and Björn Lundell* 535
- 30 From Critical Theory into Information Systems Practice: A Case Study  
of a Payroll-Personnel System  
*Teresa Waring* 555
- 31 Resistance or Deviance: A High-Tech Workplace During the Bursting  
of the Dot-Com Bubble  
*Andrea Hoplight Tapia* 577
- 32 The Politics of Knowledge in Using GIS for Land Management in India  
*S. K. Puri and Sundeep Sahay* 597
- 33 Systems Development in the Wild: User-Led Exploration and  
Transformation of Organizing Visions  
*Margunn Aanestad, Dixi Louise Henriksen, and Jens Kaaber Pors* 615
- 34 Improvisation in Information Systems Development  
*Jørgen P. Bansler and Erling C. Havn* 631

## **Part 7: Panels and Position Papers**

- 35 Twenty Years of Applying Grounded Theory in Information Systems:  
A Coding Method, Useful Theory Generation Method, or an  
Orthodox Positivist Method of Data Analysis?  
*Tony Bryant, Jim Hughes, Michael D. Myers, Eileen Trauth,  
and Cathy Urquhart* 649
- 36 Building Capacity for E-Government: Contradictions and Synergies  
in the Dialectics of Action Research  
*David Wastell, Peter Kawalek, Mike Newman, Mike Willetts,  
and Peter Langmead-Jones* 651
- 37 New Insights into Studying Agency and Information Technology  
*Tony Salvador, Jeremy Rose, Edgar A. Whitley, and Melanie Wilson* 653

38	Researching and Developing Work Activities in Information Systems: Experiences and the Way Forward <i>Mikko Korpela, Jonathan P. Allen, Olav Bertelsen, Yvonne Dittrich, Kari Kuutti, Kristina Lauche, and Anja Mursu</i>	655
39	Crossing Disciplinary Boundaries: Reflections on Information Systems Research in Health Care and the State of Information Systems <i>Nicholas Barber, Patricia Flatley Brennan, Mike Chiasson, Tony Cornford, Elizabeth Davidson, Bonnie Kaplan, and <b>Ela Klecun</b></i>	657
40	The Great Quantitative/Qualitative Debate: The Past, Present, and Future of Positivism and Post-Positivism in Information Systems <i>Michael D. Myers, Detmar Straub, John Mingers, and Geoff Walsham</i>	659
41	Challenges for Participatory Action Research in Industry-Funded Information Systems Projects <i>Karin Breu, Christopher J. Hemingway, and Joe Peppard</i>	661
42	Theory and Action for Emancipation: Elements of a Critical Realist Approach <i>Melanie Wilson and Anita Greenhill</i>	667
43	Non-Dualism and Information Systems Research <i>Abhijit Jain</i>	675
44	Contextual Dependencies and Gender Strategy <i>Peter M. Bednar</i>	681
45	Information Technology and the Good Life <i>Erik Stolterman and Anna Croon Fors</i>	687
46	Embracing Information as Concept and Practice <i>Robert Stephens</i>	693
47	Truth to Tell? Some Observations on the Application of Truth Tests in Published Information Systems Research <i>Brian Webb</i>	699
48	How Stakeholder Analysis can be Mobilized with Actor-Network Theory to Identify Actors <i>A. Pouloudi, R. Gandechea, C. Atkinson, and A. Papazafeiropoulou</i>	705
49	Symbolic Processes in ERP Versus Legacy System Usage <i>Martin M. T. Ng and Michael T. K. Tan</i>	713

50	Dynamics of Use and Supply: An Analytic Lens for Information Systems Research <i>Jennifer Whyte</i>	723
51	Applying Adaptive Structuration Theory to the Study of Context-Aware Applications <i>Carl Magnus Olsson and Nancy L. Russo</i>	735
	<b>Index of Contributors</b>	743

# FOREWORD

We are grateful for the support of the sponsoring and host organizations. Without their involvement, endorsement and financial support, this conference would not have been feasible. We would therefore like to extend our sincere thanks to the following organizations: the International Federation of Information Processing (IFIP), Technical Committee 8 of IFIP and WG 8.2 in particular, the School of Informatics at the University of Manchester, and Salford City Council. We provide a brief introduction to each of these organizations by way of providing historical context and information.

## 1 ABOUT IFIP

The International Federation for Information Processing (IFIP) was established in 1960. It is a multinational federation of professional and technical *organizations* (or national groupings of such organizations) concerned with information processing. In any one country, generally only one such organization—which must be representative of the national activities in the field of information processing—is admitted as a Full Member. On March 25, 2004, 47 countries were represented by Full Member organizations.

The Federation is governed by a General Assembly which meets once every year and consists of one representative from each Member organization. The Federation is organized into the IFIP Council, the Executive Board, and the Technical Assembly. The Technical Assembly is divided into 11 Technical Committees and two Specialist Groups. These committees and groups are in turn divided into Working Groups, of which IFIP WG 8.2 is one (under Technical Committee 8).

### 1.1 About IFIP Technical Committee Eight (TC8)

IFIP TC8 is the IFIP Technical Committee dedicated to the field of Information Systems. It was established in 1966, and aims to promote and encourage the advancement of research and practice of concepts, methods, techniques, and issues related to information systems in organizations.

The declared scope of TC 8 scope is the planning, analysis, design, construction, modification, implementation, utilization, evaluation, and management of information systems that use information technology to support and coordinate organizational activities including

- effective utilization of information technologies in organizational context

- interdependencies of information technologies and organizational structure, relationships and interaction
- evaluation and management of information systems
- analysis, design, construction, modification and implementation of computer-based information systems for organizations
- management of knowledge, information, and data in organizations
- information systems applications in organizations such as transaction processing, routine data processing, decision support, office support, computer-integrated manufacturing, expert support, executive support, and support for strategic advantage plus the coordination and interaction of such applications
- relevant research and practice from associated fields such as computer science, operations management, economics, organization theory, cognitive science, knowledge engineering, and systems theory

## 1.2 About IFIP Working Group 8.2: The Interaction of Information Systems and the Organization

The International Federation for Information Processing Working Group 8.2 (WG 8.2) was established by IFIP in 1977 as a working group concerned with “the interaction of information systems and the organization.” WG 8.2 conducts working conferences, publishes books through IFIP, and publishes a semi-annual newsletter (OASIS). In addition, the working group maintains a listserv, a Web site and holds business meetings.

The aims of the working group are the investigation of the relationships and interactions among four major components: information systems, information technology, organizations, and society. The focus is on the interrelationships, not on the components themselves. Its scope is defined in terms of information systems, organizations, and society as follows:

- *Information systems*: includes information processing, the design of systems, organizational implementation and the economic ramifications of information.
- *Information technology*: includes technological changes such as microcomputers, distributed processing, and new methods of communications.
- *Organizations*: includes the social group, the individual, decision making and the design of organizational structures and processes.
- *Society*: includes the economic systems, society’s institutions and values of professional groups.

## 1.3 How to Join WG 8.2

One can become involved in the working group as a correspondent, a friend or a member. If you would like to be placed on our mailing list, just write to our secretary (preferably by e-mail) and asked to be placed on our mailing list. You will receive newsletters and conference notices. The Web page also has information relating to forthcoming events and conferences. You can also subscribe to our listserv. (Visit the WG 8.2 Web site at <http://www.ifipwg82.org/>.)

You can become a friend of the group by attending one of our working conferences or business meetings. Working conferences are held about every 12 to 18 months. Business meetings are typically conducted twice yearly, once in conjunction with a working conference, and once in conjunction with the International Conference on Information Systems (ICIS).

Typically, a friend who has participated in two out of three consecutive business meetings is eligible for election as a member. By this election process, the members of the group nominate new members, who must then be confirmed by TC8.

## **2 THE SCHOOL OF INFORMATICS, UNIVERSITY OF MANCHESTER**

Formerly the School was known as the Department of Computation, at the University of Manchester Institute of Science and Technology (UMIST). This summer is marked by a major event in the world of academe in the North West of England—namely, the merger of two illustrious universities based in Manchester: the Victoria University of Manchester (VUMAN) and UMIST. The new institution will be known as the University of Manchester. Two IT-related departments are part of this new milieu: Computer Science (from VUMAN) and Computation (UMIST). The latter will be renamed the School of Informatics and will concentrate on the development of its historical strengths on the applied side of the discipline of Computing. For this reason, it will take up a position in the Humanities Faculty of the new university, alongside Business, Education, Accounting, and other cognate disciplines. Information Systems will be a powerful force within this new Faculty, bringing together a large cadre of well-known scholars within the IS discipline, many of whom have played, and continue to play, a prominent part in the work of WG8.2.

## **3 SALFORD CITY COUNCIL**

The City of Salford is one of the various independent municipalities that make up the conurbation of Greater Manchester, lying on the north west side of the conurbation. There is a long tradition of collaboration between the City and local universities in various areas of research, especially regarding information systems and the application of IT. For nearly 10 years, there has been a particularly close relationship between the IT Services department at the City, and researchers at Salford University, Manchester Business School, and UMIST. Action research on eGovernment has been a strong feature of this collaboration, culminating in national recognition for the City as a pathfinder authority in this field and the establishment of a CRM Academy at Manchester Business School, in partnership with the School of Informatics at UMIST.

## PREFACE

This volume includes the papers and panel descriptions refereed for presentation at an International Federation of Information Processing (IFIP) Working Group 8.2 conference entitled “Relevant Theory and Informed Practice: Looking Forward from a 20 Year Perspective on IS Research.” The conference was held at the University of Manchester in Manchester, England, on July 15-17, 2004.

It was during the working group business meeting following the IFIP WG 8.2 working conference in 2001 on “Realigning Research and Practice in Information Systems Development” in Boise, Idaho, that a conference call was approved for a new conference dealing with the alignment of research practice and IS development. Those who proposed the conference had been involved with WG 8.2 and other TC 8 working groups over many years. The initial incentive for developing the theme of the conference dates back to 1997 at the Philadelphia conference. It was observed that while some were celebrating the end of the “methods wars” because some types of qualitative work had become acceptable for publication in mainstream journals, the work by others who were exploring questions outside the managerial, organizational, or technological mainstream, or who were employing innovative research approaches, was still being excluded from the discourse. Thus it was concluded that further attention to the question of research approaches was required.

In a real sense, however, the seeds of this conference were sown in 1984 at the first Manchester conference, when in the proceedings introduction Enid Mumford made a declaration that continues to express a concern of the working group.

The members of the W.G. 8.2 are dedicated to stimulating and maintaining a debate on the interrelationships between information systems, organizations and society; and to influencing IFIP members, and information scientists, teachers, trade unions, and the user of information systems, to think carefully about the organizational and societal consequences of the systems they are developing and using.

One of our areas of interest is research methodology and we have been looking critically at the kinds of research associated up to now with information science, and discussing the need for new approaches.

Our concern that traditional research methods can not adequately investigate social needs and problems...

So, as part of the working group's living tradition, wherein about every six years it makes an assessment of IS research methods, the call for this conference went out. And how the community responded!

## 1 THE REVIEW PROCESS

The papers in this volume are those that survived a rigorous review and selection process. We were gratified, at times even overwhelmed, by the record number of 113 submissions we received for the conference, with papers in a number of categories: full research papers, practice-oriented papers, and panels. Three of the papers were by authors specifically invited to provide a more panoramic view of the working group's progress and of IS research methods in general. In keeping with WG 8.2 standards, all papers (including the invited papers) were subjected to a rigorous reviewing process involving a minimum of four independent readings, with some manuscripts having double that number. An associate editor (AE) assigned to each paper solicited two independent, blind reviews. The AE reports and recommendations were then considered by the four program coauthors at a meeting in Atlanta in late November 2003, with each coauthor taking lead responsibility for an equal allocation of roughly 28 papers. Any borderline or contentious cases were referred to one or more fellow coauthors, and discussed by the group as a whole. The usual care was taken to avoid conflicts of interest in the assignment of associate editors and reviewers. In a few instances, papers were sent out for yet additional review consideration by the general chairs or others with the appropriate topical or methodological expertise.

The whole review process was underpinned and orchestrated using the AIS-ICIS conference software, enabling this complex process to operate smoothly despite severe time-space problems. The Web system allowed authors to submit papers electronically, associate editors and reviewers to be assigned by the coauthors, reviews and reports to be garnered and evaluated, decisions and recommendations to be made and recorded, and accept/reject letters to be dispatched. Although there were moments when we felt (with an acute sense of irony) in the midst of yet another IS failure, in the end all worked very well, and it is doubtful whether a manual system could have supported the process without considerably more blood, sweat, and tears.

We are deeply appreciative of the efforts made by the WG 8.2 community to see through the review process to successful conclusion, and the associate editors, in particular, who were the lynchpins of the whole process. Despite the exacting deadlines (little over a month was available), virtually all of the reviews and reports were received by the time of our Atlanta coauthors congress, enabling us to focus on our main tasks of making the final selection of papers and drawing up the preliminary program structure.

We were gratified that 8.2's reputation for rigorous review produced high quality submissions. Of the 113 submissions received, we accepted 33 full research papers (representing an acceptance rate of 29 percent for full papers) and 6 panel proposals. Outside of this favored selection, there were many other interesting and valuable submissions that we felt could make a very useful contribution to the conference. Rather than limit this conference to a predetermined acceptance rate, we were anxious to

include these as well, in the interests of both building the community and stimulating lively debate. Accordingly, the cochairs decided at their Atlanta meeting to create a new category of position papers, referred to more colloquially as “bright ideas.” Authors were invited to submit a 2000 word précis, summarizing their main points in a pithy and provocative fashion; 11 such pieces are featured in the final program.

Considering the final count for all papers, both full (33), position paper (11), and panels (6) yields a more egalitarian overall acceptance rate of 44 percent. This compares interestingly with the three previous research method conferences. According to our best records, the initial gathering from September 1-3, 1984, (called a *colloquium* because of sensitivities within IFIP itself, as we are informed by those who were present) had 18 papers and only 44 non-presenting participants. Virtually all papers submitted were presented and published, nearly a 100 percent acceptance rate. It seems the community of radicals in our then-new discipline were few in number. By 1990 and the Copenhagen conference, a total of 23 papers (including 4 invited papers and 2 panels) were presented and published. Since there were 59 papers submitted, the overall acceptance rate had fallen to 42 percent. Interestingly, the conference itself was among the most heavily attended in the working group’s history. There were nearly 200 participants, attesting to the interest in the topic. The 1997 Philadelphia conference had 28 pieces, including 2 panels and 2 invited papers, from a field of roughly 60 submissions, yielding approximately a 45 percent acceptance rate.

So, for the present conference, it is with some confidence that we can claim that the quality of the reviewing process, the useful and thoughtful reviews received by authors for both accepted and rejected works, and the rigor of that process, are in keeping with the best traditions of the working group. Moreover, we are told by members of the publishing community that the WG 8.2 conferences hold a much higher standard for acceptance than is the norm for other working group conferences. We are proud to maintain that standard. And for the record, the working group itself now numbers more than 200 acknowledged members, 453 friends, plus correspondents and others who participate via our books and our newsletter, OASIS. Perhaps the cost of being a revolutionary is no longer so high!

## 2 THANKS TO OUR SPONSORS

The organization of such an IFIP working conference can be a daunting process. For starters, given the bylaws and procedures of the parent organization, the working group itself is not allowed to raise funds and maintain accounts, except for very small balances to fund direct operating activities such as publishing newsletters. IFIP working groups are voluntary organizations without paid staff or deep financial pockets. Accordingly, each conference is treated as a relatively independent fiscal entity wherein the conference organizers and book editors are taking on all of the responsibility to fund and manage the event. This insulates IFIP and WG 8.2 and scares the devil out of the organizers. Sponsorship in various forms is both essential and greatly appreciated. In the case of the Manchester 2004 event, our gratitude and thanks go to the following organizations for financial and material support to the conference:

- The School of Informatics, University of Manchester—£10,000 plus moral and administrative assistance.
- The IT Services, Salford City Council—£3,000 that provided the initial seed money to the conference.
- Georgia State University Department of Computer Information Systems for housing members of the conference committee and for hosting the November 2003 meeting of the conference chairs.
- The AIS for providing the use of the on-line reviewing system. Special thanks to Eph McLean and Samantha Spears at the AIS for their assistance.
- The home institutions of the conference chairs for funding the needed travel, administrative support, and indirect costs of managing the conference. Thank you to Florida International University's Chapman Graduate School of the College of Business Administration, and The School of Informatics at the University of Manchester.

### **3 ACCOLADES AND ACKNOWLEDGMENTS**

It is customary to thank everyone from our families and teachers to our colleagues and support staffs, parakeets, and other ways of maintaining sanity under pressure. Customary as it may be, we none-the-less truly are grateful. We heartily thank Janice DeGross for her much-needed acerbic dose of keeping us on schedule and her superb work making all the authors' various, and often times tardy, contributions into a book. Thanks also to the local organizing committee led by Peter Kawalek of the University of Manchester for aggressive negotiations and sensitive choice of venues for all of the conference events. Also, we acknowledge Kath Howell at the University of Manchester for stepping in to tidy up a host of problems and last minute crises. We doff our hats to the 8.2 officers, Julie Kendall, Michael Myers, and Nancy Russo, WG 8.2 Webmaster Kevin Crowston, and the Honorary Conference Chairs, Richard Baskerville and Frank Land, for their supportive advice on sensitive matters. Rod Padilla, technical support manager at Georgia State University, kept the reviewing site running at the most critical times and customized it for our use.

Thanks, finally, to the conference chairs of the previous research methods conferences and to the past WG 8.2 chairs. We asked each of them to provide personal remembrances of the research conferences and the history of the working group to help us in framing our own remarks and continuing narrative of the working group's activities, for we see this event as part of a living and evolving intellectual and social history. It is a history in which we are grateful to have had the chance to play a part.

We are most thankful for each other, for our ability to work together, to complement each other's strengths and tolerate one another's foibles. But finally, of course, we really are most thankful to you, the members of the IFIP Working Group 8.2 community, for bringing this all about.

Bonnie Kaplan  
Duane Truex  
Dave Wastell  
Trevor Wood-Harper

# CONFERENCE CHAIRS

## *General Chairs*

Richard Baskerville  
Georgia State University

Frank Land  
London School of Economics

## *Program Chairs*

Bonnie Kaplan  
Yale University

Duane P. Truex, III  
Florida International University and  
Georgia State University

David Wastell
