Preface

The objective of the workshops held in conjunction with ER 2002, the 21st International Conference on Conceptual Modeling, was to give participants the opportunity to present and discuss emerging hot topics, thus adding new perspectives to conceptual modeling. To meet this objective, we selected the following four workshops:

- 2nd International Workshop on Evolution and Change in Data Management (ECDM 2002)
- ER/IFIP8.1 Workshop on Conceptual Modelling Approaches to Mobile Information Systems Development (MobIMod 2002)
- International Workshop on Conceptual Modeling Quality (IWCMQ 2002)
- 3rd International Joint Workshop on Conceptual Modeling Approaches for E-business: a Web Service Perspective (eCOMO 2002)

ER 2002 was organized so that there would be no overlap between the conference sessions and the workshops. This proceedings contains workshop papers that were revised by the authors following discussions during the conference. We are deeply indebted to the members of the organizing committees and program committees of these workshops for their hard work.

July 2003

Antoni Olivé, Masatoshi Yoshikawa, and Eric S.K. Yu
Workshop Co-chairs
ER 2002

ECDM 2002

Change is a fundamental but sometimes neglected aspect of information and database systems. The management of evolution and change and the ability of database, information and knowledge-based systems to deal with change is an essential component in developing and maintaining truly useful systems. Many approaches to handling evolution and change have been proposed in various areas of data management, and this forum seeks to bring together researchers and practitioners from both more established areas and from emerging areas to look at this issue. The second ECDM workshop (the first ECDM workshop was held with ER 1999 in Paris and its report can be found in SIGMOD Record 29(1):21–25, March 2000) dealt with the manner in which change can be handled, and the semantics of evolving data and data structure in computer-based systems. The workshop topics included:

- Semantics of Change in Time and Space
- Modelling and Management of Time-Varying Data, Temporal Databases
- Handling Changes and Versioning of Semi-structured Data
- Handling Changes of Metadata, Schema Evolution and Versioning

- Change Detection, Monitoring and Mining
- Evolution and Change in Internet-Based Information Systems
- Evolution and Change in E-services and E-world Systems
- Induction of Cause and Effect, Logics for Evolution
- Maintenance of Views, Summaries, Dictionaries and Warehouses
- Managing Evolution of Sources in Information Integration

With respect to the main ER conference, the ECDM workshop aims at stressing the evolutionary aspects involved in conceptual modelling and in the development and implementation of systems, ranging from the modelling of information dynamics to the dynamics of the modelling process itself. Another explicit aim of ECDM 2002 (as it was also for ECDM 1999) was to bring together scientists and practitioners interested in evolution and change aspects in different research fields and, thus, people who often belong to completely separate communities. It is our opinion that such interactions can be tighter and cross-fertilization can be more useful in the context of a collaborative workshop like ECDM than in the context of the main conference sessions. Moreover, since the emphasis is on the evolutionary dimension, a special insight is sought upon this specific aspect, one that could hardly find an appropriately broad coverage in the scope of the main ER conference.

Following the acceptance of the workshop proposal by the ER 2002 organizing committee, an international and highly qualified program committee was assembled from research centers worldwide. As a result of the call for papers, the program committee received 19 submissions from 15 countries, and after rigorous refereeing 10 high-quality papers were eventually chosen for presentation at the workshop, and these appear in these proceedings.

We would like to thank both the program committee members and the additional external referees for their timely expertise in reviewing the papers. We would also like to thank all authors for submitting their papers to this workshop. Last, but not least, we would like to thank the ER 2002 organizers for their support, and in particular the workshop co-chairs, Antoni Olivé, Eric Yu, and Masatoshi Yoshikawa.

MobIMod 2002

Mobility is perhaps the most important market and technological trend in information and communication technology. With the advent of new mobile infrastructures providing higher bandwidths and constant connections to the network from virtually everywhere, the way people use information resources is predicted

to be radically transformed. The rapid developments in information technology (IT) are substantially changing the landscape of organizational computing. Workers in many business areas are becoming increasingly mobile. Workers in more and more areas will be required to act more flexibly within the constraints of the business processes they are currently engaged in. At the same time they will often want to use the same information technology to support their private tasks. During the last few years, a new breed of information system has emerged to address this situation, referred to as m-commerce systems or mobile information systems. The objective of the workshop was to provide a forum for researchers and practitioners interested in modeling methods for mobile information systems to meet, and exchange research ideas and results.

The relevant topics for the workshop included the following aspects of m-commerce and mobile information systems:

- Mobile commerce models and architecture
- Service modeling
- Mobile access to enterprise systems (ERP, CRM, SCM, etc.)
- Enterprise modeling and business process re-engineering
- Workflow modeling
- Meta-modeling and method engineering
- Evaluation of modeling languages and experience
- Modeling of access control to provide security and privacy
- Content personalization and user modeling
- Context modeling
- Requirement modeling
- Information and database modeling
- Component engineering and integration
- Geographical information systems and location-based services
- Cross-platform conceptual interface modeling
- Mobile modeling tools
- Modeling of embedded systems
- (Mobile) Agent modeling and design
- Agile modeling, extreme modeling, and extreme programming

October 2002

John Krogstie
Program Chair
MobIMod 2002

IWCMQ 2002

Conceptual modeling has been recognized as a key task that lays the foundation of all later design and implementation work. The early focus on conceptual modeling may help in building better systems, without unnecessary rework at later stages of the development when changes are more expensive and more difficult

to perform. Quality in conceptual modeling has been a topic of research since the early 1990s but recently a stronger emphasis has been given to the assessment, evaluation, and improvement of the models produced in the early phases of the system development life-cycle. The theme of the 1st International Workshop on Conceptual Modeling Quality was methodologies and instruments for the quality assurance of conceptual modeling processes and products. The workshop intended to provide a forum for researchers and practitioners working on approaches, frameworks, methods, techniques, guidelines, and tools for measuring, predicting, evaluating, controlling, and improving the quality of conceptual modeling processes and artifacts.

eCOMO 2002

The Internet is changing the way businesses operate. Organizations are increasingly relying on the Web to deliver their goods and services, to find trading partners, and to link their existing legacy applications to other applications. Web services are rapidly becoming the de facto enabling technology of today's e-business systems, and will soon transform the Web as it is now into a new distributed application-to-application computation network. This will be the basis for the future network economy which comes with the need for new and adapted business models, business technologies and, as a consequence, new challenges for the developers and users of e-business systems. They will have to supply and to adopt Web-based services over the complete supply chain as well, in the context of new digital products. In particular, services that allow enterprises to combine or integrate their business processes will have to be developed, respectively their models, with those of the partners when forming a dynamic network or a virtual enterprise.

Web service technology is generally perceived as an ideal candidate to fulfil the requirements of modern networked enterprises because they allow both loose-coupling and dynamic composition at both the enterprise and the business application level. Progress has been made in the area of Web service description and discovery, and there are some important standards emerging. Nevertheless, there is still a list of issues that need to be addressed and researched in connection with conceptual modeling methodologies that are tailored to deal with the specifics of Web-services and their alignment with e-business requirements before Web services becomes the prominent paradigm for distributed computing and electronic business. Industry is delivering new exciting solutions at a fast rate, but most of them lack a firm scientifically validated foundation.

The eCOMO workshop series was started in 2000. It aims to bring together experts from practice and academia who are working from different, but re-

lated perspectives on the same research questions, such as from the perspectives of business modeling, enterprise application integration, the semantic Web, business metadata and ontologies, process management, business re-engineering, business models, and business communication languages.

The contributions to eCOMO 2002 that are collected in these proceedings passed a careful review process in which each of the submitted papers was assessed by three experienced reviewers. They deal with modeling aspects of e-business processes, the model-based composition of processes and Web services, specific approaches to managing unstructured e-business information and to extracting relevant data from Web forms, and with the question of designing successful e-business Web applications.

Many persons deserve appreciation and recognition for their contribution to making eCOMO 2002 a success. First of all we have to thank the authors for their valuable contributions. Similarly, we thank the members of the program committee, who spent a lot of time in assessing submitted papers and participating in the iterated discussions on acceptance or rejection. Special appreciation is due to Christian Kop, who organized and co-ordinated the whole preparation process including the composition of these proceedings. We also express our thanks to Jian Yang and Klothilde Pack for the organizational support they provided. Last, but not least, we thank the ER organizers and the ER workshop co-chairs (Antoni Olivé, Masatoshi Yoshikawa, and Eric Yu) for their support in integrating eCOMO 2002 into ER 2002.

Table of Contents

Second International Workshop on Evolution and Change in Data Management (ECDM 2002)

Management of Time and Changes in Information Systems

Change Management for a Temporal Versioned Object-Oriented Database	1
<i>Renata de Matos Galante, Nina Edelweiss, Clesio Saraiva dos Santos</i>	
Towards Temporal Information in Workflow Systems	13
<i>Carlo Combi, Giuseppe Pozzi</i>	
Preserving and Querying Histories of XML-Published Relational Databases	26
<i>Fusheng Wang, Carlo Zaniolo</i>	
A Lightweight XML Constraint Check and Update Framework	39
<i>Hong Su, Bintou Kane, Victor Chen, Cuong Diep, De Ming Guan, Jennifer Look, Elke A. Rundensteiner</i>	
Change Discovery in Ontology-Based Knowledge Management Systems ..	51
<i>Ljiljana Stojanovic, Nenad Stojanovic, Alexander Maedche</i>	

Architectures, Models, and Tools for Systems Evolution

An Architecture for Managing Database Evolution	63
<i>Eladio Domínguez, Jorge Lloret, María Antonia Zapata</i>	
Reifying Design Patterns to Facilitate Systems Evolution	75
<i>Florida Estrella, Zsolt Kovacs, Jean-Marie Le Goff, Richard McClatchey, Norbert Toth</i>	
Managing Configuration with Evolving Constraints in Design Databases .	88
<i>Tom W. Carnduff, Jeevani S. Goonetillake</i>	
Intentions of Operations - Characterization and Preservation	100
<i>Mira Balaban, Steffen Jurk</i>	
An Active Approach to Model Management for Evolving Information Systems	112
<i>Henrik Gustavsson, Brian Lings, Bjorn Lundell</i>	

ER/IFIP8.1 Workshop on Conceptual Modelling Approaches to Mobile Information Systems Development (MobIMod 2002)

Mobile Information Systems - Research Challenges on the Conceptual and Logical Level	124
<i>John Krogstie, Kalle Lyytinen, Andreas Opdahl, Barbara Pernici, Keng Siau, Kari Smolander</i>	
A Cooperation Model for Personalised and Situation Dependent Services in Mobile Networks	136
<i>Michael Amberg, Stefan Figge, Jens Wehrmann</i>	
Sequence Diagrams for Mobility	147
<i>Piotr Kosiuczenko</i>	
A Pattern-Based Approach to Mobile Information Systems Conceptual Architecture	159
<i>Walter A. Risi, Gustavo Rossi</i>	
Support of Integrated Wireless Web Access through Media Types	173
<i>Klaus-Dieter Schewe</i>	
Domain-Specific Modelling for Cross-Platform Product Families	182
<i>Steven Kelly, Risto Pohjonen</i>	
Dynamic Database Generation for Mobile Applications	195
<i>Ralf Mühlberger</i>	
m-WONDA: The "Write Once 'n' Deliver Anywhere" Model for Mobile Users	205
<i>Dionysios G. Synodinos, Paris Avgeriou</i>	
Basic User Requirements for Mobile Work Support Systems - Three Easy Steps	217
<i>Asbjørn Følstad, Odd-Wiking Rahlff</i>	
Accounting and Billing of Wireless Internet Services in the Third Generation Networks	229
<i>Päivi Kallio, Giovanni Cortese, Roberto Tiella, Alessandro Zorer</i>	

International Workshop on Conceptual Modeling Quality (IWCMQ 2002)

Research in Quality of Conceptual Models

Keynote Speech: Theoretical and Practical Issues in Evaluating the Quality of Conceptual Models	241
<i>Daniel L. Moody</i>	

Quality in Conceptual Modeling - New Research Directions	243
<i>Geert Poels, Jim Nelson, Marcela Genero, Mario Piattini</i>	

Requirements and Entity Relationship Models

Evaluation Framework of Requirements Engineering Tools for Verification and Validation	251
<i>Raimundas Matulevičius, Darijus Strašunskas</i>	

Hierarchical ER Diagrams (HERD) - The Method and Experimental Evaluation	264
<i>Peretz Shoval, Revital Danoch, Mira Balaban</i>	

Detection of Redundant Arcs in Entity Relationship Conceptual Models .	275
<i>David S. Bowers</i>	

Class Models and Architectures

Assessing Object-Oriented Conceptual Models Maintainability	288
<i>Marcela Genero, José Olivas, Mario Piattini, Francisco Romero</i>	

Validation of UML Classes through Animation.....	300
<i>Patricio Letelier, Pedro Sánchez</i>	

Building Quality into Learning Management Systems - An Architecture-Centric Approach	312
<i>Paris Avgeriou, Simos Retalis, Manolis Skordalakis</i>	

Web and Interactive Models

Towards the Quality Evaluation of Functional Aspects of Operative Web Applications	325
<i>Silvia Abrahão, Luis Olsina, Oscar Pastor</i>	

A Model and an XSL Framework for Analyzing the Quality of WebML Conceptual Schemas.....	339
<i>Sara Comai, Maristella Matera, Andrea Maurino</i>	

Quality of Interactive Models	351
<i>John Krogstie, Håvard D. Jørgensen</i>	

Third International Joint Workshop on Conceptual Modeling Approaches for E-business: A Web Service Perspective (eCOMO 2002)

Process, Models, and Web Services

Process Models and Business Models - A Unified Framework	364
<i>Maria Bergholtz, Prasad Jayaweera, Paul Johannesson, Petia Wohed</i>	

Behavior-Consistent Composition of Business Processes from Internal
and External Services 378
Günter Preuner, Michael Schrefl

Process-Oriented, Flexible Composition of Web Services with UML..... 390
Sebastian Thöne, Ralph Depke, Gregor Engels

E-business Methods and Technologies

Extracting Data behind Web Forms 402
Stephen W. Liddle, David W. Embley, Del T. Scott, Sai Ho Yau

Managing Unstructured E-commerce Information 414
*Rui Gureghian Scarinci, Leandro Krug Wives, Stanley Loh,
Christian Zabenedetti, José Palazzo Moreira de Oliveira*

Modelling Web-Based Banking Systems: Story Boarding and User Profiling 427
*Klaus-Dieter Schewe, Roland Kaschek, Claire Matthews,
Catherine Wallace*

**Success Factors for Conceptual Modeling in
E-business**

Communication: Key to Success on the Web..... 440
