Preface

This volume, “Petri Net Technology for Communication-Based Systems,” is a state-of-the-art report in the series *Advances in Petri Nets*. It shows how various well-established and new Petri net notions and techniques can be used for modeling communication-based systems, with special focus on workflow management and business processes.

In the last 6 years this topic has been studied by the DFG Forschergruppe Petri Net Technology in Berlin in close cooperation with the international community. The main results of this cooperation were presented at the 1st and 2nd International Colloquia on Petri Net Technologies for Modeling Communication-Based Systems, held in Berlin in 1999 and 2001, respectively. A careful selection of contributions by members of the DFG Forschergruppe and by international experts in this field are presented in this volume. Taking into account the fruitful discussions during the two colloquia and the cross-refereeing process for the accepted papers, a high degree of common understanding was achieved, leading to a highly comprehensive presentation in this volume.

The topics of the papers in this volume can be roughly classified into the following two areas:

- Petri net technology and
- application to communication-based systems.

Since most papers comprise aspects of both areas, we chose an alphabetic order. However, in the following we give a rough overview of the contributions in both areas according to the main focus of the corresponding papers.

Petri Net Technology

The main objective of the DFG Forschergruppe has been to develop an application-oriented Petri net technology. The main idea has been to develop a “Petri Net Baukasten” comprising three different views: the application developer view, expert view, and tool view. An overview of this “Petri Net Baukasten” is given in the paper by H. Weber, H. Ehrig, W. Reisig and the other main members of the DFG Forschergruppe. The application development assistance related to the application developer view is discussed in more detail in the paper by H. Weber. The concept of Petri net transformations and refinements is essential for the expert view. Transformations are studied in the papers by B. Braatz, H. Ehrig, M. Urbasek and F. Parisi-Presicce, with focuses on the conceptual and the formal framework. Rule-based refinement is studied by J. Padberg and M. Urbasek, and transition refinement for the verification of distributed algorithms by S. Peuker.

The tool view is supported by the two papers by M. Weber and E. Kindler on the Petri net kernel and the Petri net mark-up language, respectively. The generation of animation views in the paper by C. Ermel, R. Bardohl and H. Ehrig

is based on the tool GENGED. A more general view of the integration of tools is given by V. Braun, T. Margaria and B. Steffen using the Electronic Tool Integration (ETI) platform.

A comparison of Petri nets with activity diagrams is discussed by R. Eshuis and R. Wieringa, while Petri nets are proposed as a semantic model for message sequence charts by O. Kluge.

Applications to Communication-Based Systems

New concepts for business processing based on Petri nets are presented in the papers by W.M.P. van der Aalst and J. Dehnert, with focuses on inheritance and soundness respectively. Quantitative engineering, interorganizational management, and dynamic service outsourcing for business processes are considered by J. Desel, K. Lenz and A. Oberweis, and P. Grefen and S. Angelov. Interesting new theoretical frameworks are open Petri nets as semantic models for workflow integration and team automata for CSCW in the papers by R. Heckel and J. Kleijn, respectively. Moreover the new concept of algebraic higher-order nets is used by K. Hoffmann in order to achieve flexible modeling of business processes. Last, but not least, an integrated approach for automated control system development based on Petri nets is presented by E. Schnieder et al.

We are most grateful to the German Research Council (DFG) for support of the DFG Forschergruppe and the International Colloquia on Petri net technology in 1999 and 2001, to all authors and referees of this volume for their careful work, to Kathrin Hoffmann for her assistance in the editorial process, and, last, but not least, Springer-Verlag for a fruitful and smooth cooperation in publishing this volume in the well-established series *Advances in Petri Nets*.

Table of Contents

The Petri Net Baukasten of the DFG Forschergruppe PETRI NET TECHNOLOGY <i>H. Weber, H. Ehrig, W. Reisig, A. Borusan, S. Lembke, J. Dehnert, M. Weber, A. Martens, J. Padberg, C. Ermel, and A. Qemali</i>	1
Application Development Assistance with the Petri Net Baukasten <i>Herbert Weber</i>	22
Petri Net Transformations in the \gg Petri Net Baukasten \ll <i>B. Braatz, H. Ehrig, and M. Urbášek</i>	37
Four Steps Towards Sound Business Process Models <i>Juliane Dehnert</i>	66
Generation of Animation Views for Petri Nets in GenGED <i>Claudia Ermel, Roswitha Bardohl, and Hartmut Ehrig</i>	83
The Petri Net Kernel <i>Michael Weber and Ekkart Kindler</i>	109
The Petri Net Markup Language <i>Michael Weber and Ekkart Kindler</i>	124
Case Study Logistics: Flexible Modeling of Business Processes Using Algebraic Higher-Order Nets <i>Kathrin Hoffmann</i>	145
Rule-Based Refinement of Petri Nets: A Survey <i>J. Padberg and M. Urbášek</i>	161
Modelling a Railway Crossing with Message Sequence Charts and Petri Nets <i>Olaf Kluge</i>	197
Quantitative Engineering of Business Processes with VIP $business$ <i>Jörg Desel and Thomas Erwin</i>	219
Inter-organizational Business Process Management with XML Nets <i>Kirsten Lenz and Andreas Oberweis</i>	243
Three-Level Process Specification for Dynamic Service Outsourcing: From Petri Nets to ebXML and WFPDL <i>Paul Grefen and Samuil Angelov</i>	264
Open Petri Nets as Semantic Model for Workflow Integration <i>Reiko Heckel</i>	281

Team Automata for CSCW – A Survey <i>Jetty Kleijn</i>	295
Comparing Petri Net and Activity Diagram Variants for Workflow Modelling – A Quest for Reactive Petri Nets <i>Rik Eshuis and Roel Wieringa</i>	321
BASYSNET – An Integrated Approach for Automated Control System Development <i>Eckehard Schnieder, Mourad Chouikha, Stefan Einer, and Michael Meyer zu Hörste</i>	352
The Electronic Tool Integration Platform (ETI) and the Petri Net Technology <i>Volker Braun, Tiziana Margaria, and Bernhard Steffen</i>	363
Inheritance of Business Processes: A Journey Visiting Four Notorious Problems <i>W.M.P. van der Aalst</i>	383
A Formal Framework for Petri Net Class Transformations <i>Francesco Parisi-Presicce</i>	409
Concurrency Based Transition Refinement for the Verification of Distributed Algorithms <i>Sibylle Peuker</i>	430
Author Index	455
