Volume 17

Editors: Bruno Siciliano · Oussama Khatib · Frans Groen

Springer Tracts in Advanced Robotics

Edited by B. Siciliano, O. Khatib, and F. Groen

- Vol. 16:** Cuesta, F.; Ollero, A.
Intelligent Mobile Robot Navigation
224 p. 2005 [3-540-23956-1]
- Vol. 15:** Dario, P.; Chatila R. (Eds.)
Robotics Research – The Eleventh International Symposium
595 p. 2005 [3-540-23214-1]
- Vol. 14:** Prassler, E.; Lawitzky, G.; Stopp, A.; Grunwald, G.; Hägele, M.; Dillmann, R.; Iossifidis, I. (Eds.)
Advances in Human-Robot Interaction
414 p. 2005 [3-540-23211-7]
- Vol. 13:** Chung, W.
Nonholonomic Manipulators
115 p. 2004 [3-540-22108-5]
- Vol. 12:** Iagnemma K.; Dubowsky, S.
Mobile Robots in Rough Terrain – Estimation, Motion Planning, and Control with Application to Planetary Rovers
123 p. 2004 [3-540-21968-4]
- Vol. 11:** Kim, J.-H.; Kim, D.-H.; Kim, Y.-J.; Seow, K.-T.
Soccer Robotics
353 p. 2004 [3-540-21859-9]
- Vol. 10:** Siciliano, B.; De Luca, A.; Melchiorri, C.; Casalino, G. (Eds.)
Advances in Control of Articulated and Mobile Robots
259 p. 2004 [3-540-20783-X]
- Vol. 9:** Yamane, K.
Simulating and Generating Motions of Human Figures
176 p. 2004 [3-540-20317-6]
- Vol. 8:** Baeten, J.; De Schutter, J.
Integrated Visual Servoing and Force Control
198 p. 2004 [3-540-40475-9]
- Vol. 7:** Boissonnat, J.-D.; Burdick, J.; Goldberg, K.; Hutchinson, S. (Eds.)
Algorithmic Foundations of Robotics V
577 p. 2004 [3-540-40476-7]
- Vol. 6:** Jarvis, R.A.; Zelinsky, A. (Eds.)
Robotics Research – The Tenth International Symposium
580 p. 2003 [3-540-00550-1]
- Vol. 5:** Siciliano, B.; Dario, P. (Eds.)
Experimental Robotics VIII
685 p. 2003 [3-540-00305-3]
- Vol. 4:** Bicchi, A.; Christensen, H.I.; Prattichizzo, D. (Eds.)
Control Problems in Robotics
296 p. 2003 [3-540-00251-0]
- Vol. 3:** Natale, C.
Interaction Control of Robot Manipulators – Six-degrees-of-freedom Tasks
120 p. 2003 [3-540-00159-X]
- Vol. 2:** Antonelli, G.
Underwater Robots – Motion and Force Control of Vehicle-Manipulator Systems
209 p. 2003 [3-540-00054-2]
- Vol. 1:** Caccavale, F.; Villani, L. (Eds.)
Fault Diagnosis and Fault Tolerance for Mechatronic Systems – Recent Advances
191 p. 2002 [3-540-44159-X]

Foreword

At the dawn of the new millennium, robotics is undergoing a major transformation in scope and dimension. From a largely dominant industrial focus, robotics is rapidly expanding into the challenges of unstructured environments. Interacting with, assisting, serving, and exploring with humans, the emerging robots will increasingly touch people and their lives.

The goal of the new series of Springer Tracts in Advanced Robotics (STAR) is to bring, in a timely fashion, the latest advances and developments in robotics on the basis of their significance and quality. It is our hope that the wider dissemination of research developments will stimulate more exchanges and collaborations among the research community and contribute to further advancement of this rapidly growing field.

The biennial Workshop on Algorithmic Foundations of Robotics (WAFR) has traditionally published archival volumes of high reference value. Since its latest edition, WAFR has found a more suitable home within STAR, together with other thematic symposia devoted to excellence in robotics research.

The Sixth edition of Algorithmic Foundations of Robotics edited by Michael Erdmann, David Hsu, Mark Overmars, and Frank van der Stappen offers a collection of a broad range of topics in advanced robotics. The contents of these contributions represent a cross-section of the current state of robotics research from one particular aspect: algorithms, and how they reflect on the theoretical basis of subsequent developments. Validation of algorithms, design concepts, or techniques is the common thread running through this focused collection.

Rich by topics and authoritative contributors, WAFR culminates with this unique reference on the current developments and new directions in the field of algorithmic foundations. A fine addition to the series!

Naples, Italy

Bruno Siciliano
STAR Editor

Preface

Algorithms play a crucial role in describing the computational processes that plan, control, or reason about motion, manipulation, and perception, both in the physical world and in simulated virtual environments. Such algorithms form a foundation for robotics, but also for processes in other application domains, ranging from structural molecular biology to computer games.

The biannual Workshop on the Algorithmic Foundations of Robotics focuses on such algorithmic issues. The Sixth incarnation of the workshop was held from July 11 till July 13 2004 in Zeist, the Netherlands, organized by Utrecht University. Approximately 50 international researchers participated. The program contained three invited talks, by Bruce Donald (Dartmouth College), Pieter Jonker (Delft University of Technology) and Ken Goldberg (University of California at Berkeley). There were twenty-seven additional papers presented, carefully selected by an international program committee. The papers study a large range of algorithmic issues, including significant new results in sampling-based path planning, online searching, location, tracking, coverage and grasping, to name just a few. Important applications in for example computing protein structures, finding camera motions and robot soccer were discussed. This volume collects all these contributions.

In addition to the editors of this volume, the program committee of WAFR 2004 included: Karl Böhringer, Greg Chirikjian, Yan-Bin Jia, Oussama Khatib, Rolf Klein, Steven LaValle, Ming Lin, Kevin Lynch, Mark Moll, Nancy Pollard, Elon Rimon, Thierry Siméon, Jack Snoeyink, and Michael Yu Wang.

As the co-chairs of WAFR 2004 we would like to thank the Dutch Organization for Scientific Research (N.W.O.) and Utrecht University for their financial support. Also we would like to thank Thomas Ditzinger of Springer Verlag for his assistance in publishing this volume. Finally, our thanks go to all the participants and authors for their enthusiasm in making WAFR 2004 such a wonderful research meeting.
